

The
HENSZEY
Boiler Feed
REGULATOR

The complimentary comments of this leading eastern textile manufacturer concerning the Henszey Boiler Feed Regulator concurs with the opinions often expressed by other aggressive manufacturers.

The Henszey Boiler Feed Regulator works on the metallic expansion principle — no small tubes to spring leaks — nothing to rust — nothing to get out of order. When the boiler needs water, the Henszey Regulator automatically springs into action — delivers just the right amount of water to bring the level back where it belongs. Provides positive boiler water level control continuously and accurately under all load conditions.

HENSZEY CO., Dept. D10, WATERTOWN, WIS.

The Henszey Boiler Feed Regulator is a simple, compact unit — installs right in the line — no additional supports are necessary. Made for pressures up to 600 lbs. and in sizes up to 4 inches.

SPECIALISTS GET BETTER RESULTS

in cooking...

Aloyco Gate Valve No. 111. This leader of corrosion-resistant valves has double-disc, ball-and-socket type wedges, which are free to rotate and are non-fouling in any position, providing positive closure at all times.

...and in VALVE MANUFACTURE

• High grade restaurants have a tendency to specialize in certain dishes, for which they become famous. This same trend toward specialization has proved its effectiveness in the manufacture of quality valves.

We specialize in one product exclusively—valves for service in corrosive-fluid pipe lines. Concentration in this one field has developed a valuable technological background in this organization that we are glad to place at the service of any manufacturer who has problems relating to valves that must have high corrosion-resistant qualities.

We offer our customers the benefit of long experience in the chemistry of corrosion and contamination, the metallurgy of corrosion-resistant alloys and the designing and manufacturing experience that assures best results in the production of valves that are metallurgically and mechanically correct. Let us discuss your requirements with you.
