Attention: Kathy Pinnie
Industrial Relations Director

Dear Ms. Pinnie:

To complete an investigation report of OD 20964-22, the death claim of Edsel Spence, I would like to request the following information:

1. Mr. Spence's employment record including job titles and dates of transfer.
2. Written job descriptions of each job done. (It would be preferable if the job descriptions were pertinent to the time of employment of Mr. Spence.)
3. Dates of physical examinations.
4. Sampling data by OSHA and/or company hygienists for asbestos. Also any other sampling data (for other occupational exposures such as silica or oil mist exposures) done in areas in which Mr. Spence had worked (excluding noise surveys).
5. A Material safety data sheet (MSDS) for Renite and Kevlar.
6. The name and title of a foreman or the nurse that may have known and worked with Mr. Spence. Perhaps they could say whether the claimant was a smoker and whether or not he had any hobbies that would contribute to his dust or fume exposure.
7. Confirmation of whether or not monochlorobenzene was used in your quality control department and whether 25% ammonium formate was used to spray hot molds in the 1960's, (per Division of Safety and Hygiene survey reports.)

Ms. Pinnie, I appreciate your help on these matters. The courtesy and consideration shown this morning during the investigation were very much appreciated.

Sincerely,

Beth Wetzel

Beth Wetzel
Industrial Hygienist
