Subject: CANCER WARNING LABELING

Interoffice
Communication

VISTA

In response to your IOC on the subject dated November 30, 1984, the painting out of the cancer warnings stenciled on the PVC hopper cars was done in large part during the painting of the "VIPX" on these cars. However, as a result of a mis-communication one of the painting crews did not perform this part of the work. We have no estimate of how many cars remain to be completed. Our program is now one of painting out the warnings which remain as the cars arrive in the plant.

New truck and railcar tags (ex. 5305 and 5265) without the cancer warning have been ordered with delivery expected in early February.

If additional work is needed, please advise.
