Dr. Joseph F. Treon
The Kettering Laboratory
College of Medicine
University of Cincinnati
Cincinnati, Ohio

Dear Dr. Treon:

Through our Bureau of Medicine and Surgery, I am in possession of a copy of a letter written by you September 7, 1956, to Mr. Elmer P. Wheeler, of the Monsanto Chemical Company, in which you describe some experiments on the generation of a saturated atmosphere of Pydraul F-150. (Presumably this refers to Pydraul 150 as we know it.)

We have obtained similar results, but with a narrower spread of values, which we will probably publish in a report from this Institute. At this time, I would be interested in knowing how you regard these results of last year, and whether we may have your permission to quote them. If you did not wish to be quoted, I would be satisfied to refer to your results as contained in a private communication from you, according to which the values obtained were similar to ours, but with a greater deviation and range of variation.

Thank you very much for your kind attention.

Sincerely yours,

Julius Sendroy, Jr.
Chief Chemist

Copy to:
Mr. Elmer P. Wheeler
