

September 27, 1949

Dr. Charles E. Whipps
Carlisle, Indiana

Dear Doctor Whipps:

I am enclosing a copy of the report of our examination of Mr. [REDACTED]

No findings were elicited suggestive of lead poisoning of any type, nor did the results of the chemical examination of the samples of blood and urine indicate unusual absorption of lead compounds, these being well within the normal range.

Mr. Weir requested that I send this report to you.

Please write to us if we can be of any further assistance.

Sincerely yours,

KVK:vr

Karl V. Kitzmiller, M.D.

Encl.

8-17-1949

MEDICAL RECORD

PRESENT COMPLAINTS (Include duration, precipitating factors, such as injury or unusual industrial hazard, progression, and previous therapy.)

Onset 4-5 years ago (1943-44) - did not know what the trouble was - felt run down, weak, noticed loss of weight especially during summer - became dizzy and fainted while attending church (March 1946) - visited physician following day (Dr. Whipps, Carlisle, Indiana) (see attached file with History of illness as recorded by Dr. Whipps). Doctor did not find any physical abnormality to account for trouble. Patient disturbed by fact that several S.O. agents had died suddenly in recent months and thought that something

in gas might be poisoning them. Dr. Whipps thought this a possibility worth investigating so sent samples of urine in fruit jar with metal cap to nearby Sherman Hospital, Sullivan - report - "lots of lead".

Samples then sent to Kettering Laboratory.
