Mike, so I'm not sending this quite yet. I'll wait for response on a meeting.

But for a future trip based on a key issue, I wanted to provide you the attached and set up a time to explain it more when you have a moment. In the end, we can substantially address plastic pollution. Alterra in Akron is a plant which is contributing. There about 9 of these plants in the US. Over 70 in Europe. The past EPA proposed 18 chemical rules (SNURs) which has continued to impede the progress for advanced recycling in the U.S.

Withdrawal of the proposed 18 rules will send important market signals, will be a great way to satisfy the 10:1 regulatory EO, and the administrator can see it first hand in Akron.

We will send this official to the front office shortly, but wanted to connect with you so you have the context. We have also met with the key regulatory team at EPA and working with them on the regulatory side of this as well.
