Date: April 14, 1987
Subject: Labeling of Asbestos Containing Insulating Materials

* * * * *

All insulation containing asbestos is to be labeled per Industrial Hygiene Bulletin No. 126, January 9, 1987.

I have an initial supply of labels from which I can send to you a limited supply at no charge. If you require labels, please return the attached request form. There are two sizes of self-sticking labels. The large label, R-342-58(1), is for flat surface areas. The smaller label, R-342-58, comes in rolls of 1,000 labels (2.5" long each) and is for piping, valves, etc.

The following is an excerpt from Industrial Hygiene Bulletin No. 126 from Homer M. Cole.

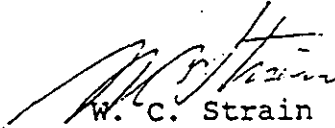

"In order to ensure that all employees are informed of the presence of asbestos in the workplace, all insulation (pipe, bulk, etc) containing asbestos is to be labeled. The label shall contain the following information:

DANGER

CONTAINS ASBESTOS FIBER

AVOID CREATING DUST

Labeling should be applied where confusion may occur, such as close to valves or flanges and adjacent to changes in direction, branches, and where pipe pass through walls, floors, or ceilings. Labeling is to be applied at the beginning and end of continuous pipe runs and every 75 feet where runs are longer."
