MEMORANDUM TO FILE

FROM: C. L. DICKINSON, JR. CLD

CARCINOGEN SURVEY MEETING WITH F&F, JUNE 26, 1975

P. J. Graham, G. R. McClure, E. E. Swain, Jr. (F&F), B. C. McKusick, J. G. Aftosmis, N. D. Krivanek, and C. L. Dickinson, Jr. (Haskell) met to review the literature survey from the January 31, 1975 meeting and complete the review of F&F's raw materials.

The following is recommended from the literature survey:

A bacterial mutagen test be run on acrylamide

Further literature be sought on peroxy compounds with emphasis on follow-up of the incompletely reported work of Koten and Falk.

The following materials had adequate tests so that no further work is indicated at this time:

Maleic Anhydride
Bakelite Epoxy Resin 4221
Melamine Formaldehyde Resin
EPON 828
Bis Phenol A (keyed to EPON 828)
Lead

The following had no data, but consideration of use and related compounds suggests no action at this time:

Desmodur® N-75
Proxel CRN

Triclene is under consideration elsewhere as new data has been presented and judgment at this meeting was not appropriate.

From other searches that were sent as a consequence of the January 31 meeting, Swain would like a Haskell position on chromic acid and dioxane.

The following is recommended from the raw materials review:

A Toxline search on diaminodiphenylsulfone be run.

Literature searches already run on the following compounds or related compounds be sent to E. E. Swain:

Selenium
Thiuran and analogs
Cadmium
Carbon disulfide
Tetramethyl thiourea
