REPRINTS

To Assist In Your Industrial Respiratory Protection Program

currently stocked titles

Establishing an Effective Respiratory Protection Program gives an overview of areas to be considered in setting up such a protection program.

4 pp. 111.17-63 (April 1971)

Respiratory Protection — Administering A Program describes the responsibilities of the individual in charge of a program and the authority necessary to achieve optimum results.

4 pp. 111.17-64 (May 1971)

The Respiratory System explains the physiology and anatomy of the human respiratory system and its function and how contaminants or the lack of oxygen interfer with this function.

4 pp. 111.17-65 (June 1971)

Respiratory Hazards to be protected against include oxygen-deficient atmospheres and airborne contaminants. How these hazards affect the respiratory systems are described.

6 pp. 111.17-66 (July 1971)

Hazard Assessment describes various processes and related equipment that can create a respiratory exposure hazard. Analyses of these problems is explained.

10 pp. 111.17-67 (August 1971)

Reduction and Control of Respiratory Hazards explains various engineering control methods that can be employed to reduce or eliminate respiratory hazards at their source.

6 pp. 111.17-68 (September 1971)

Personal Protection discusses the types of equipment available to provide adequate protection from the different types of respiratory hazards.

12 pp. 111.17-69 (October 1971)
(Available early 1972)

Training, Inspection, and Maintenance covers the procedural areas that are required to keep protective equipment operating at optimum effectiveness.

111.17-70 (November 1971)
(Available early 1972)

Medical Surveillance explains the role of the physician and auxiliary personnel in monitoring respiratory hazards and employee care.

111.17-71 (December 1971)
(Available early 1972)

Respiratory Protective Equipment gives the safety professional a basic explanation of the types of available equipment.

7 pp. 111.17-29 (July 1967)

Industrial Ventilation offers an explanation of at-the-source control of respiratory hazards.

7 pp. 111.17-30 (August 1967)
