F&FP PIGMENT SPECIFICATIONS
(*WITH ATTACHMENT)

F&FP's goals in this program are to:

- improve quality control via raw materials specifications and paint production techniques (using a PQM technique similar to that being developed by our TiO₂ plants) to improve costs and,
- to document Q.C. data as needed for a new venture.

For information, attached is a summary of our agreement with F&FP on the subject.

- The instrumental color limits represent our current shipping limits as reviewed by Technical Service and Production.
- F&FP personnel (shown on the distribution sheet) are reviewing these. Requested changes, if any, will be handled individually via the SCS procedure (viz. require approval by the Business Center).
- F&FP agreed that, for minimum cost, they will adopt our test methods. These test methods have been provided.
- Once the specifications are approved, a SCS will be submitted requesting transferral of plant release test data (on shipment) to the F&FP "ship-to" location and to the F&FP R&D quality coordinator.
