SUBJECT

Special Departmental Physical Examination for Akron Main Plant Workers Exposed to Asbestos Fibers.

An OSHA regulation requires comprehensive pulmonary examinations for all workers directly exposed to asbestos fibers longer than five micrometers. It is therefore necessary for all such workers to receive annually the special pulmonary examination as stated by A. V. Gold, M.D. In addition to the annual examination, preemployment and reassignment examinations are required.

The current list of workers who are required to receive the asbestos examination includes numerous departments and job descriptions. In order to simplify this request to you, I am attaching a portion of my January 26, 1973, letter to Dr. Gold. The attachment includes all job descriptions and the corresponding department numbers in which workers are now known to be exposed to asbestos fibers at the main plant. However, the reference to a job description should include the note "where exposed to breathing asbestos fibers".

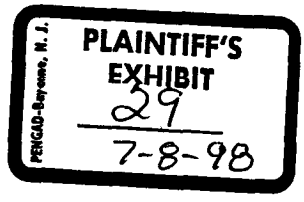

Please so notify the union representative that these examinations are required. Send me a copy of that notification. Let me know if you have any questions about this request.

The above list of names is of course subject to change. One cause of change would be reassignment or termination of employment. A second cause would be the addition of names of new employees whose work exposes them to inhaling asbestos fibers. The listed job descriptions should help in scheduling such new employees for the annual asbestos examination. A third cause is that some tasks which feature potential exposure to asbestos fibers occur infrequently and at irregular times. I have made arrangements to obtain the names of the workers who perform these tasks when they occur. The names will be unobtainable until then.
