As we discussed today, Tony, 10R resin for Nixon requires special testing. This testing consists of Brabender extruder gel testing which is run by day shift salaried junior chemists. We, therefore, require guiding rules in our testing and release of this resin for Nixon. The rule we have previously utilized, that has worked effectively and that we must still observe, is that 10R resin will not be tested and released prior to the noon of the day following the start of the drying of 10R resin.
