 From Joe Loschiavo Location _____ Phone No. _____
 Subject C-8 in construction laydown area Date 8/26/81

The results of the wipe samples on the trailer top are as follows:

.032 mg
 .027 mg
 .048 mg

$$\bar{x} = .036 \text{ mg.}$$

Since 0.1 mg or greater is considered significant, there is no C-8 accumulation problem in this area.

The air samples are both below the less than half the provisional AEL. I conclude that there is no C-8 problem in this area.

.07 ppb - two samples of Bldg. 164
 .24 ppb - ~ 75' south of Bldg. 164
 near construction shanty
