

GENERAL ELECTRIC COMPANY

August 11, 1945

Mr. E. L. Sanderlin
Purchasing Agent
Monsanto Chemical Company
Anniston, Alabama

Dear Mr. Sanderlin:

This letter refers to yours of August 6 concerning equipment for testing the resistivity of insulating liquids.

The equipment which we now use is covered by drawing H-3962689-1. I suggest that if you are interested in obtaining new electrodes for testing the liquid aroclors that you place an order on the Pittsfield Works of the General Electric Company, marking your order for the attention of Mr. R. H. Oliphant. Your order should call for one complete set of electrodes for testing the resistivity of liquid insulation. Specify that the order includes the glass plate as well as the electrodes themselves.

Of course if your present electrodes merely need a replating, you could probably have that done most conveniently in Anniston.

Yours very truly,

C
