CHESTERTON

FIBERGLASS ROPES, GASKETS and CERAMIC PACKINGS

Style 295 Ceramic Rope
Style 345 Ceramic Braided Packing

CHESTERTON Ceramic Rope and Packing offer gasket and sealing materials with excellent insulating value and high temperature durability in boiler, furnace, oven and molding applications at temperatures to 2300°F. (1260°C.) They resist most corrosive agents except phosphoric and hydrofluoric acid, and hot concentrated alkalies

Style 160 Fiberglass Tape
Style 162 Fiberglass Cloth
Style 164 Fiberglass Tubing

The new line of CHESTERTON fiberglass products offer many unique characteristics and advantages including flexibility, dimensional stability and high tensile strength. They are resistant to many acids and alkalies, and are unaffected by most bleaches and solvents in industrial and marine applications in temperatures up to 1000°F. (540°C.)

Style 1710
Non-asbestos, Environmental Packing

STYLE 1710 is applicable for most solvent systems and many aqueous systems within a PH range of 5-9. These systems should be monitored for the first seven days of operation to insure packing compatibility. Excessive gland take-up may indicate lack of chemical compatability and a packing change may be needed to another CHESTERTON style. STYLE 1710 is not recommended for use with strong acids such as hydrofluoric (HF), acetic (CH_3COOH), sulfuric (H_2SO_4), hydrochloric (HCL), nitric (HNO_3), phosphoric (H_3PO_4) or strong bases such as sodium hydroxide ($NAOH$), potassium hydroxide (KOH), ammonium hydroxide (NH_4OH). Strict observance of the PH range of 5-9 is recommended. TEMPERATURE RANGE: To 500°F. (260°C.) SPEED: To 1200 ft./min. (6 m/sec.)

Licensed under U.S. Patent No. 3,572,195

Style 161 Fiberglass Rope

CHESTERTON Fiberglass rope is a durable twisted material for blowoff pipes and general gasketing applications to 1000°F. (540°C.).

Style 289 Gasket Tape

CHESTERTON STYLE 289 Fiberglass gasket tape serves a useful purpose in functioning as a high pressure steam gasketing material. Typical installations are the doors or covers of boilers, vulcanizers, kettles, cylinder heads and retorts. It will withstand the wear and abrasion where steam doors must be opened many times daily.

STYLE 289 is manufactured from fiberglass cloth coated with a heat resisting rubber compound which is white in color.

CHESTERTON gasket tape is furnished in any width, and in thicknesses ranging from 1/16" to 1½" (1.6 to 38.1 mm.). It is available in a variety of shapes and dimensions and also in square form from ⅜" to 1½" (9.5 to 38.1 mm). All tape is made only to special order.

Style 249 Fiberglass Gaskets

CHESTERTON STYLE 249 Manhole and Handhole Gaskets are fabricated from woven fiberglass yarns which have been coated with a heat-resistant compound to ensure that the gaskets will operate properly in service. The friction compound which has been incorporated in the cloth is designed to act as a seal against the penetration of liquids or steam and is controlled so that additional weight is not added to the individual gaskets, thus assuring proper thickness control.
