Dr. Richard Osland
1740

I have looked over the laboratory results you sent me and as soon as I get the PAB samples I will send them back to you. I have the following comments to make.

There seems to be no pattern of liver disease present. There are, however, some abnormal results, chiefly in the hematocrit, glucose and cholinesterase. I think you may want to check these and so advise the employees. I list these abnormalities:

Glucose 252 mg.

Glucose 143 mg.

Hemoglobin 11 gms.
Hematocrit 33%

Cholesterol 341
Glucose 139

SGOT 63
SGPT 50

Cholesterol 308

Hemoglobin 18 gms.
Hematocrit 51%

Cholesterol 378
