This note confirms verbal medical approval given for use of a 1-3/4 inch cord bushing for hair dryers HD-4, 7, and 9 produced at Yamada. Similar approval was earlier given for production at NECO. This change is covered by EN #100,145X. This approval is based in part on cord flex test data which shows the bushing to be acceptable - $\bar{X}$ = 7593 cycles; R = 3948 - 15,187; N = 20; 3/4 pound rotary.
