Chicago, Illinois 60611

Dear Denise:

Enclosed is a list of addresses that I obtained from the Missouri drivers license bureau for former Monsanto employees who are eligible to participate in the Northwestern/Monsanto health study. I still have yet to receive anything from the Arkansas drivers license bureau or motor vehicle registration department, but I will send you everything that I receive once I hear from Arkansas.

I have also enclosed 24 tracing records that were used by the Johns Holding Company. Each tracing record contains demographic and vital status information for the employee, in addition to the most recent address that we were able to obtain. As you will note, the employees were known to be alive in 1985, but their addresses were only valid through 1974. However, we contacted directory assistance and were able to confirm that there still is a listing for each employee at the address listed on the tracing record. We did not contact the employee, but recorded the telephone number on the right side of the tracing record for you to use.

Please let me know if you have any success with this information.

Sincerely,

Terry L. Leet
Epidemiologist
