MANUFACTURERS ARE GETTING WHITER PAINTS AT LOWER COSTS WITH . . . . . .

TITANOX-B

Many paint manufacturers, seeking to improve their products and at the same time to reduce costs, have discovered in Titanox-B the ideal pigment. They have found that the modern pigment not only produces the whitest paints ever made . . . but that Titanox paints retain their whiteness through years of service.

When you combine exceptional whiteness and chemical stability with other well known features of Titanox-B . . . . high hiding value, extreme particle fineness, high hiding power, ready mixing qualities and moderate price . . . . you have sufficient reasons for the fast growing popularity of Titanox-B. Alert manufacturers realize that with all these desirable properties, it is logical that Titanox-B paints should appeal to paint buyers everywhere.

Ask us to assist you to adapt Titanox-B to your paint formulas. Write for detailed information and prices.

TITANIUM PIGMENT CO., INC.

CONSIDER THE NEW LOW PRICES ON . . . . . .

TITANOX-C

Recent price reductions on Titanox-C (titanium base) provide an exceptionally important reason why paint manufacturers should study the various ways in which this modern pigment will reduce costs and at the same time improve quality.

Users now appreciate that Titanox-C saves grinding time. Because of its dispersive properties, it shortens the manufacturing operations. In many instances grinding has been entirely eliminated by using Titanox-C.

Here are other important reasons for adopting Titanox-C. It has high hiding value . . . exceptional hiding power . . . and the high degree of whiteness so essential to quality paints. The fast growing popularity of Titanox-C is ample proof that this economical pigment makes paint that meets the demands of the shrewdest buyers.

Write today for new low prices on Titanox-C. Full information will be gladly furnished without obligation.

00048

DUTCH BOY...after 4 years

He won't stop paying for this paint job

...until he pays for burning it off!

● Take a look at the upper photograph which shows a "cheap paint" job after four years' exposure to the weather. Notice how the paint has gone to pieces—how it has cracked and scaled—how moisture has gotten in and split the wood.

The man who has to buy this paint job will be very unhappy. But not any more than he will be with those paints, or the "cheap paint" job-ers who do paint for hire, if they're going to cost their prospective owner real money to put the surface on shape for repainting.

Now look at the lower photograph and observe how good the Dutch Boy paint job has stood up under the strain. The wood is still completely protected. There will not be any need to burn off or scrape off this paint. The gradual chalking has left a perfect surface for repainting. What other paint can equal this record? • • •

● The owner of [illegible] Dutch Boy paint job is not a "cheap paint" job-er. He is one of Dutch Boy advertisers in 1932. National magazines, such as The Saturday Evening Post and others, are bringing this economy message to millions of prospective customers.

And so will the [illegible] who specify Dutch Boy paints. They're the paints that last longest—the paints that cost the least per year of protection. They're Dutch Boy.

A "CHEAP" PAINT JOB JUST CAN'T BE CHEAP

"CHEAP PAINT *after 3 years*

DUTCH BOY *after 3 years*

NOTICE: If the film image is less clear than this notice, it is due to the quality of the document being filmed

THE MAN WHO GOT THIS "CHEAP" PAINT JOB THOUGHT HE WAS *getting a bargain*

[redacted]

CHEAP paint after 3 years

DUTCH BOY after 3 years

In the upper left photograph is the same house as it looked to the man who bought the "cheap" paint job. If he was getting a bargain, he didn't realize that he would keep on paying for it. He would keep on paying in the way of heavier repainting costs and the ever-increasing losses he pays for letting it roll. For, as every painter knows, it costs almost as much to paint a house poorly as it does to paint it properly.

But just look at the other photograph and observe how Dutch Boy White Lead paint still protects the same five-year-old house as it stands today. Note the absence of cracking and scaling. We have Dutch Boy painters who can testify to practical chalking, because a painter would face him in painting.

* * *

Millions of property owners are making their paints results-wise every month in increased appearance and economy by using Dutch Boy White Lead and Linseed Oil. Dutch Boy Linseed Oil also strengthens the paint film to help keep it looking new. Dutch Boy paints. Have the nearest painter who uses Dutch Boy paints estimate on your next job. Specify white-lead paint ... and be sure it is made with Dutch Boy pure white lead.

DUTCH BOY *gives a quality paint job*

● Paint intended for apartment, office building or hotel service must stand up under repeated cleaning, and still keep a fresh and pleasing appearance. In this respect, Dutch Boy White-Lead paint has no superior. It can be washed again and again.

But that's only part of the story: You can use Dutch Boy every where—to make paint for wood, plaster, wall board, masonry or metal, as well as to produce flat or eggshell finishes for interiors—gloss paint for outside use—undercoatings for enamels—plastic finishes.

Furthermore, you achieve the exact color effects you want by using Dutch Boy. With this pure white-lead, the necessary thinners and tinting materials, your painter will find it quick and easy to obtain the greener tints you may specify.

"The Decorative Possibilities of Paint" is a useful booklet that should have a place in your files. If you have not received one, just send your request to our nearest branch.

Camera explodes

PAINT IDEA FOR ALL TIME!

It took four years to prepare this advertisement. Take four minutes to study it.

Two paints...one of them Dutch Boy White-Lead...the other a "cheap" paint...applied in the same manner . . . exposed to the same weather conditions . . . and, now, after four years . . . here's the story of the two paints told by the camera in unaltered, unretouched photographs. Study these photographs carefully. They speak far more eloquently than words.

NATIONAL LEAD COMPANY - 111 Broadway, New York; (N.G.A.Inc., Buffalo) 900 W. 18th St., Chicago; (Van Camp Hdw. & Iron Co., Inc.) 820 W. Superior Ave., Cleveland; 722 Chestnut St., St. Louis; 2240 24th St., San Francisco; (National Lead Co., Inc.) 116 Sumner St., Boston; National Lead & Oil Co. of Pa., 316 Fourth Ave., Pittsburgh; John T. IDEA

ME!

...nutes to study it.

...p" paint...applied
..., and, now, after
...ers in unaltered,
...y quick for more

There's the picture story of two paints, told in four convincing chapters. But it's a story with a climax that can only be told in figures. It is this: If the "cheap" paint cost, say, $250 applied, its yearly cost based upon two years of life would be $125. If Dutch Boy White-Lead, applied to the same job, cost say $270, its yearly cost based on the four years of life illustrated here would be $67.50....a saving of $2.80 in paint costs for these four years alone...an additional saving of $125 for every year beyond four. Moreover, you also save on Dutch Boy because it doesn't require burning and scraping at repaint time.

00048

The mistake the user of "cheap" paint makes is in thinking of paint simply as a commodity to be sold at so much per gallon.

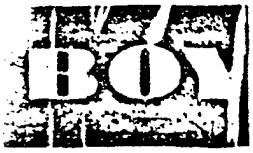

You can't judge a paint's real cost by the amount you put per gallon or per job. It's the service it gives . . . the way it lasts . . . that counts.

A Dutch Boy paint job, for example, may cost slightly more than "cheap" paint to the beginning. It always costs less in the end. For in addition to the dollars and cents saving we graphically showed above, Dutch Boy also effects another important economy. Dutch Boy does not crack or scale and therefore does not require burning and scraping, a very expensive operation, at repaint time. Dutch Boy gives old gracefully through gradual chalking. It actually *prepares itself* for repainting!

Next repaint time when an established pattern and specific Dutch Boy White Lead paint system you know, is quite as essential as geological formation. Dutch Boy White Lead, for with over the point that the particular requirements of your job . . . even for the different exposure conditions encountered on the different sides of your house. And, as the paint is mixed to order, he can give you the exact colors you want.

[illegible] can make reception rooms bright and fresh as a June morning...

● How hospital reception rooms have been made cheerful and inviting through the discovery of colors that are reminiscent of a spring morning. With the help of these discoveries, this room is sure to make a favorable impression on visitors.

However, reception rooms represent only one of a hospital's decorative problems. It must be remembered that every room or department in a hospital requires individual color treatment. Combinations of certain colors have been found effective in producing a beneficial effect on convalescents. Reds and yellows may, sometimes, be used in the rooms for other types of patients.

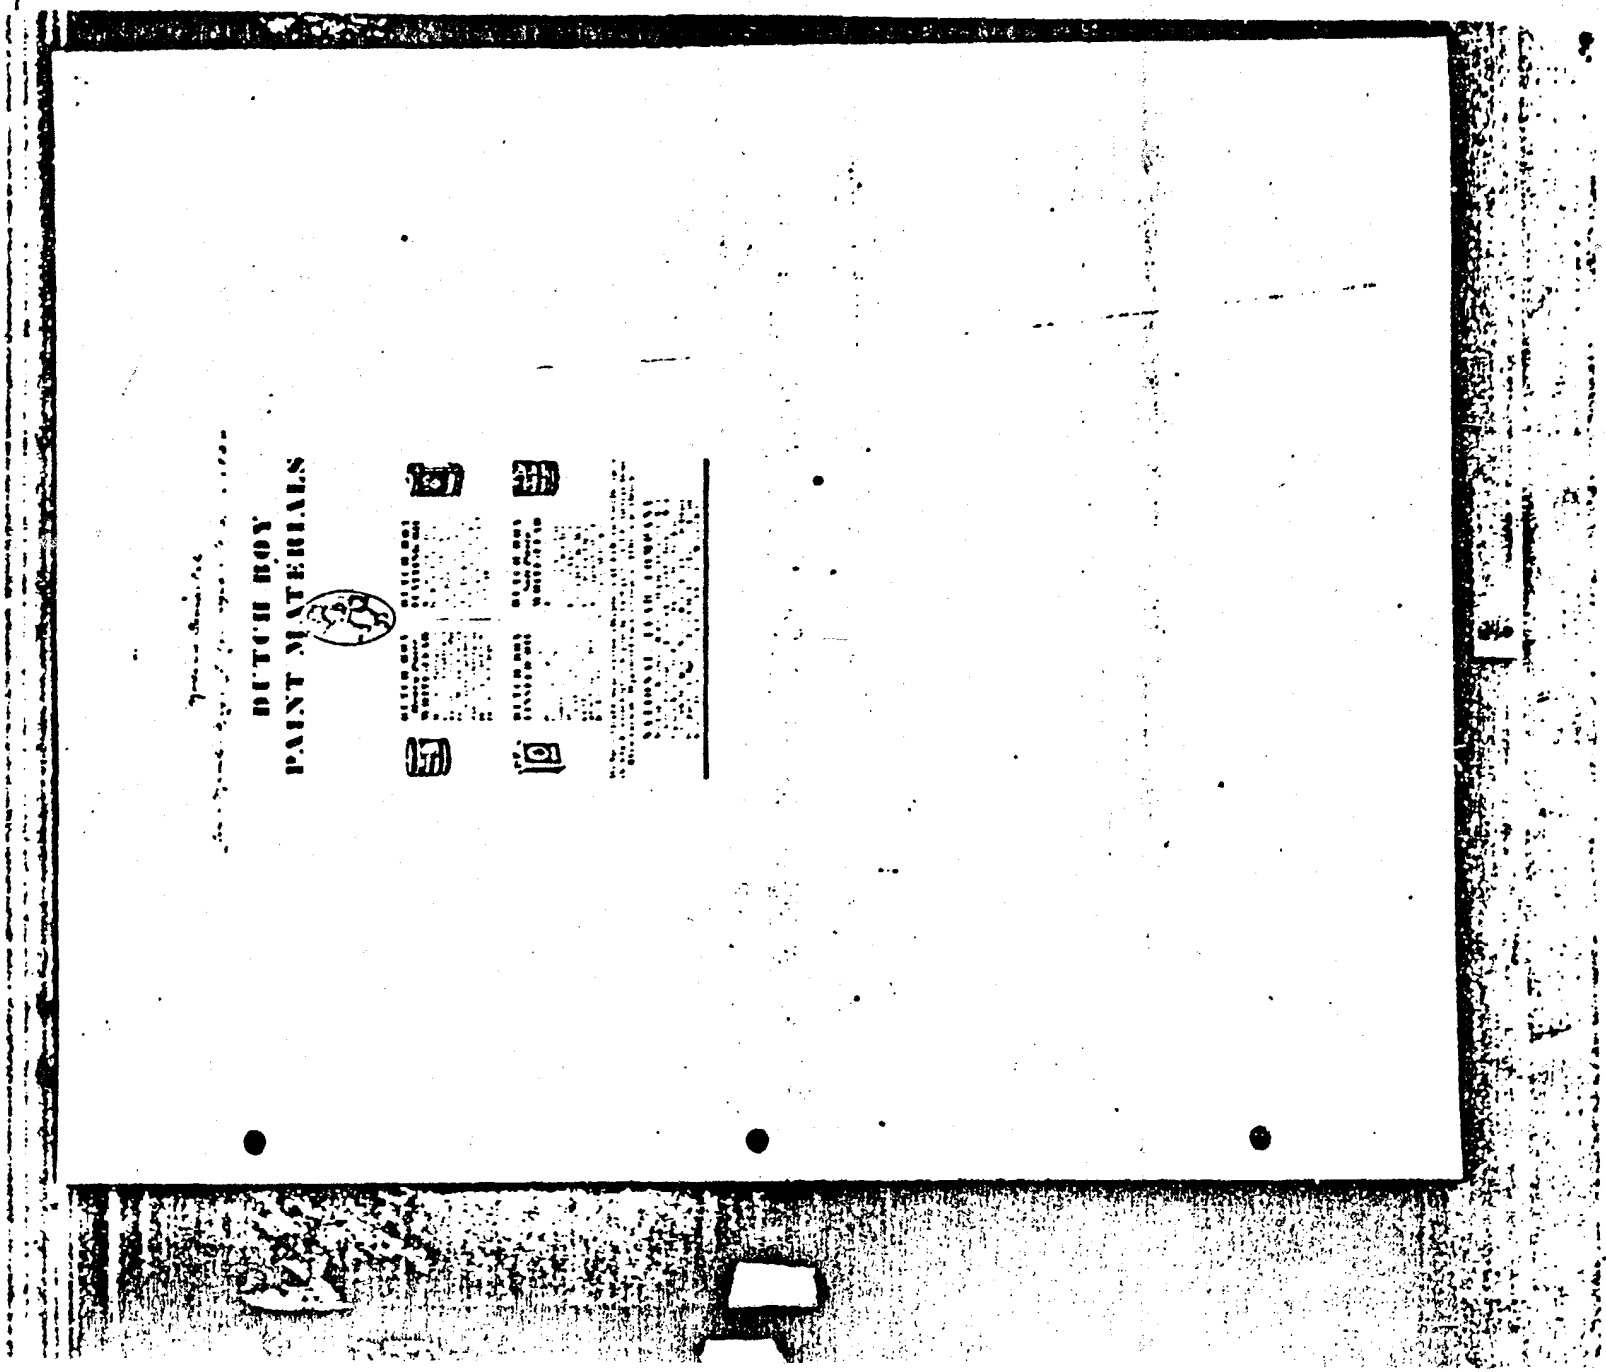

The selection of the correct colors for any hospital room is a matter for careful study. Individual conditions must always be weighed. For instance, the size, lightness, exposure, and, of course, the use and purpose of the room are all important considerations.

Our colorgram at the Department of Color Research and Decoration has thoroughly studied the proper use of color in hospitals. Hospital executives will gladly cooperate with hospital officials, superintendents, and architects in preparing the correct color treatments for any hospital room in an entire hospital. This helpful consultation service is rendered without cost or obligation. Just address the Department of Color Research and Decoration care of our nearest branch.

IN HANDLING ACID SOLUTIONS . . .

Save trouble *with Homogeneous Lead Lined equipment*

WITH so much emphasis being placed on the use of lead for corrosion protection, the chemical industry has studied the relative merits of various types of lead lined equipment.

These investigations, backed by the varied experience of many companies, have thrown the spotlight on the advantages of Homogeneous lead lined tank and other major equipment. The emphasis is on the chemical bond existing between the shells of these tanks that the lining is impossible for the steel under vacuum, pressure and temperature variations up to within a few degrees of the melting point of the lead itself.

The inseparability and the well-established permanency of structure of lead and steel in the process of Homogeneous lead lined tanks, vacuum evaporators, reaction tanks, storage jacketed kettles, and pipe and tanks, digesters, autoclaves and agitators.

National Lead Company is also a source of supply for the following related products: "Chemical Tubing" chemical lead lined pipe; "Chemical Fittings and Valves" valves for handling dilute sulphuric and other corrosive liquors and acids and "Chemical" Hardhead fittings, valves, cocks and pumps.

NATIONAL LEAD COMPANY, 111 Broadway, New York, N. Y.

"UNITED"

Chem-Rayon Hardlead flanged acid valves

This modernized acid valve has many features which make it specially suitable for chemical plant use.

1. It has a bonnet of steel and brass completely covered with Hardlead.

2. It has a deeper stuffing box, permitting the use of more packing, held in place by a Hardlead gland.

3. Steel studs surrounding the gla[illegible] are placed in the cast iron yoke, reducing the possibility of corrosion in the minimum.

4. It has Hardlead [illegible] cast integral with body of valve, allowing saving in weight without loss of strength.

"United Chem-Rayon" valves come in both "Y" and angle patterns in such ranges, from ¾ in. to 6 in.

for sulphuric acid service

Chemical Lead Lined valves, pipe and fittings

For equipment in contact with sulphuric acid solutions, leaders in the chemical industry have wisely selected "United Tubeset" lead-lined pipe and "United" valves and fittings.

In choosing the "United Tubeset" brand, they have obtained pipe with chemical lead lining inseparably bonded to the outer steel shell. "United" lead-lined valves and fittings measure up to the same high standard of quality. For instance, all flanges are recessed to take a lead [illegible] so that perfect lead-to-lead joints are provided — preventing leakage, eliminating waste.

It will pay you to write us for more detailed information covering equipment that must combine strength and resistance to acids.

IN CHEMICAL PLANT SERVICE . . .

HOMOGENEOUS...

lead lined tanks for corrosive liquors

Homogeneous chemical lead lined tanks and other equipment, such as agitators and heaters, help the chemical industry to reduce upkeep and replacement costs.

This equipment is extremely durable and long-lived, because:

1. Its chemical lead lining is highly resistant to sulphuric and allied acids.
2. The union between steel shells and lead linings is so perfect that linings and shells are inseparable even under extreme pressure and temperature variations. It is rather a fine degree of the melting point of the lead used.

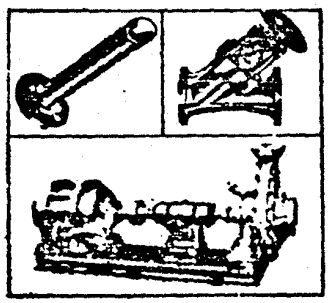

The chemical industry has adopted Homogeneous lead lined equipment because experience has shown that it gives trouble-free service where corrosive liquors are an ever-present problem.

Lead-lined Equipment *saves money in corrosive liquor service . . .*

WITHOUT sulphuric and allied acids, the chemical field would be an undeveloped industry. Without corrosion-resisting equipment, acids and alkalies could not be used. Without lead-lined equipment, the corrosive attacks of processing liquors would be even more troublesome than they are at present.

Our line of corrosion-resisting equipment, embracing "Chemimet" valves, Hardlead pumps, chemical lead-lined pipe and fittings, is sold under the "Ulmet" brand.

"Ulmet Chemimet" valves are universally recognized for their strength and durability. Both body and bonnet are made of solid Hardlead with the bonnet well reinforced. These valves have placed followers of Hardlead and the bolts have Hardlead fins which give additional strength without excessive weight.

"Ulmet" Hardlead centrifugal pumps are made with a solid Hardlead case. The impeller is made of the same alloy and the shaft of a special acid-resisting metal.

In "Ulmet Tubemet" chemical lead-lined pipe the lining is incorporably bonded to the steel and can be depended upon to stand up under rigorous service.

In addition to the above equipment, we also supply "Homogeneous" chemical lead-lined tanks, kettles, digesters, autoclaves, agitators, etc.

8 PAINTERS IN EVERY 10 use DUTCH BOY

No one knows better than a painter that there's no substitute for experience in a lasting painting material.

The experience of the most successful painters has taught them that they can always depend on Dutch Boy White Lead to give beautiful, long-lasting paint jobs that do not crack or scale. Many years of use have also proved that Dutch Boy has the advantage of wearing down gradually by gradual chalking, leaving a perfect surface for repainting.

EMPIRES PERISH
...but Lead Lasts!

● This piece of lead pipe had been buried in the ground so only 1,900 years when it was dug up by workmen excavating for a subway line in Rome.

Vespasian was emperor when this pipe was made—the inscription tells that. When Vespasian had it laid in the streets of Rome, he followed the example of Julius Caesar, who used plumbs to mark his bounds across Northumbria. In all past lead in the Roman world has been the most durable metal.

For centuries lead's unsurpassed qualities have made it a favored metal for waterpipes, roofs, gutters, pipe joints, and lead's paints have also been used for hundreds of years.

In the years lead found many uses for lead and its products . . . and one of the most important of these is the use of white-lead as paint.

Paint is used to preserve and decorate our homes, our offices, our planes, and a principal ingredient in good paint is white-lead—made by converting pure soft pig lead and ground it with linseed oil.

National Lead Company makes white-lead of the highest quality, and sells it under the name of Dutch Boy White-Lead.

Dutch Boy White-Lead gives a paint that remains attractive appearance with maximum durability. Its reputation for quality, as well as its ready adaptability to any kind of paint job, has made Dutch Boy White-Lead the largest selling brand of white-lead. Today, in this country, 6 painters out of 10 use Dutch Boy.

National Lead Company is also a dependable source of supply for many other lead products, including red-lead and other lead oxides, sheet lead, lead pipe and fittings, babbitt metal and solders. Stocks of these products are available at convenient points, and advice and information relating to them may be secured from our nearest branch.

COMPARE THESE PROPERTIES OF

TITANOX-C

WITH THOSE OF OTHER PAINT PIGMENTS.....

Until you have analyzed the many advantages of Titanox-C you cannot appreciate how much it can help you in the manufacture of interior flat wall paints, gloss and semi-gloss enamels and 4 hour enamels. Ask yourself this important question: In what other single pigment will I find all the following properties combined?

1. High opacity
2. Chemical inertness
3. High light reflective value
4. Chemical stability
5. Structural whiteness
6. Economically particle fineness
7. High hiding value

More and more users are discovering that Titanox-C is extremely helpful in producing the whitest of white paints, and other tinted finishes with velvety smoothness. Recently, many paint manufacturers have also discovered that because Titanox-C is so easily dispersed it reduces grinding time considerably — and that in some instances, the use of Titanox-C makes grinding entirely unnecessary. Get in touch with the nearest branch for helpful information and prices.

TITANOX-B

MANUFACTURERS ARE GETTING WHITER PAINTS AT LOWER COST WITH TITANOX-B

Many paint manufacturers, striving to improve their products and at the same time to reduce costs have discovered in Titanox-B the ideal pigment. They have found that this modern pigment not only produces the whitest paints ever made . . . but that Titanox paints retain their whiteness through years of service.

When you combine exceptional whiteness and chemical stability with other well known features of Titanox B . . . high hiding value, uniform particle tapering, high hiding power, ready mixing qualities and moderate price . . . you have sufficient reasons for the fast growing popularity of Titanox B. Alert manufacturers realize that with all these desirable properties, it is logical that Titanox-B paints should appeal to paint buyers everywhere.

Ask us to assist you to adapt Titanox B to your paint formulas. Write for detailed information and prices.

CONSIDER THE NEW LOW PRICES ON TITANOX-C

Recent price reductions on Titanox C (calcium base) provide an exceptionally important reason why paint manufacturers should study the various ways in which this modern pigment will reduce costs and at the same time improve quality.

Users now appreciate that Titanox C saves grinding time. Because of its dispersive properties, it shortens the manufacturing operation. In many instances grinding has been entirely eliminated by using Titanox C.

Here are other important reasons for adopting Titanox C. It has high bulking value — exceptional hiding power — and the high degree of whiteness so essential to quality paints. The fast growing popularity of Titanox C is ample proof that this economical pigment makes paint that meets the demands of the shrewdest buyers.

Write today for new low prices on Titanox-C. Full information will be gladly furnished without obligation.

A WAY TO AVOID "PAINTY" APPEARANCE IN LEATHER STOCKS

The exceptional particle fineness and high hiding strength of Titanox B offer improved means of preventing "painty" appearance in leather stocks. Finishes containing Titanox B flow into the grain. They do not cover it up. They practically become a part of the leather. Titanox B makes possible a thin coating that produces uniform covering of the hide because the thermoset is stable and more Titanox B will not react with tanning colors with which it may be combined nor with residual chromate in the skins. Consequently, it helps prevent spottiness and discoloration. It will pay you to consider carefully the advantages of Titanox B in your leather finishes. Write our nearest branch for helpful information.

TITANOX

TITANOX-B LEATHER FINISHES WON'T CAUSE "SPOTTINESS"

If you seek a way to obtain clearer brighter tones in your finishes . . . if you want to find a way to eliminate dulling or spottiness . . . Titanox B (titanium base) may help solve your problem.

Through the use of Titanox B a progressive finisher manufacturer is obtaining products that remain soft even when thickly spread. They discover it has the perfect grease and opacity.

Titanox B has exceptional hiding power and tinting strength. It is extremely fine in particle size. Titanox B is of high purity and meets the requirements of the U.S. Food and Drug Administration regarding titanium dioxide for coloring foodstuffs. Light fast colors and grays are obtained through the use of Titanox B in combination with carbon black. Titanox B is recognized as the leading brand.

It will pay you to investigate the economy and results obtainable with Titanox B

TITANIUM PIGMENT CO., INC.

LET TITANOX-B IMPROVE YOUR LEATHER FINISHES

Most manufacturers of leather finishes agree that the ideal finish for light colored leather stocks is one that has exceptional hiding power even when thinly spread. This leaves the leather porous and open and eliminates any objectionable greasy appearance. Titanox-B titanium base helps make clean bright finishes that spread well. The reason is obvious. Titanox-B has unusual hiding and tinting strength. It is unusually fine in particle size and is noted for its brilliancy of color, even at dilutions over the high refractive index will help you get to literal tinctorial colors. Backed by an long years and modern plant facilities, U.S. Titanox-B has all the characteristics of Titanox-B and is chemical stability and moisture. Titanox-B never works with coloring agents or medicinal chemicals to develop unsightly spots. Write for further information and prices.

LEATHER FINISHES ARE BRIGHTER WHEN PIGMENTED WITH TITANOX-B

Many manufacturers are finding the answer to clear tinted, light-colored leather finishes in Titanox B. Light tan, white, cream and many pastel pigment finishes are brighter, cleaner, warmer in tone when produced with Titanox B. The exceptional hiding power and tinting strength of Titanox B produces finishes that cover well even though thinly and evenly spread. They have the leather person and carry less from any objectionable "pasty" appearance. Titanox B is chemically stable and inert. It resists mold with odors or other chemicals to cause spottiness. Write for helpful information and prices.

GIVE YOUR RUBBER STOCKS GREATER SALES APPEAL WITH...

TITANOX-C

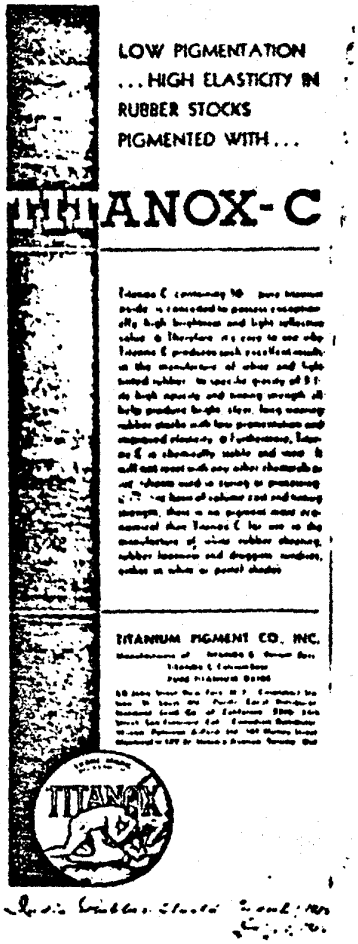

The surest way to attract more buyers for your rubber goods is to improve quality ... give your products new sales appeal. • Many rubber manufacturers are using Titanox C calcium based to produce cleaner, brighter white stocks. They who find that this remarkable pigment helps produce brighter tints in colored rubber goods. • Titanox-C, containing 98+% pure titanium oxide, is the brightest of all white opaque pigments. It is exceedingly fine in particle size. It is chemically stable and inert. It has exceptional tinting strength. • Ask us to send you helpful information about the use of Titanox-C in rubber manufacturing.

CONSTANT IMPROVEMENT IN RUBBER STOCKS BRINGS SUCCESS

The growing need for better quality rubber goods ... products that have exceptional clarity and brightness and improved elasticity has resulted in largely increased use of Titanox-C. ... Where Titanox C is used, only moderate amounts are needed to develop color or opacity. Titanox has a specific gravity of 3.9 and a high tinting strength. Light, clear stocks can be obtained economically with low pigmentation. Points to Remember ... another important property of Titanox C that recommends it for use in rubber stocks ... You may find Titanox C exactly the opposite when pigmented you need the pure white products, add enough selling quality. Write for further information.

ANOX

FOR BETTER OPACITY IN COATED STOCKS...TITANOX-B

Paper manufacturers searching for ways to improve the opacity and finish of coated stocks, have secured promising results with Titanox-B barium base. This remarkable pigment is distinguished by the following properties: 1 fine particle size, 2 exceptional brightness, 3 high tinting strength, 4 chemical inertness, 5 high refractive index, 6 moderately high bulking value. In paper manufacturing Titanox-B mixes readily with clay, blends free, or same whiter. It disperses easily with casein size. It does not tend to thicken and it brushes out well making an even coat. Our Pure Titanium Oxide T-O, has also produced excellent results as a filler in book and magazine stock. It will pay you to investigate Titanox pigments. Discover how these products may help you produce better stocks. Helpful information will be gladly furnished.

HAVE YOU TRIED

TITANOX-B

IN YOUR COATED STOCKS?

Tests to improve the opacity and finish of "super" and coated stocks indicate clearly that Titanox-B barium base gives excellent results. ● High index of refraction, remarkable brightness, fine particle size, chemical inertness and high bulking value are characteristics found in Titanox B. It mixes readily with china clay, Blanc fixe and satin white. It disperses well and does not thicken. It results in the production of a smooth, even coat. ● Pure Titanium Oxide TiO_2 has also been used advantageously in combination with china clay and other fillers. If you are interested in securing whiter stocks that show superior opacity, investigate Titanox pigments. Helpful information gladly furnished on written request.

THE MORAL OF THIS TALE IS

WILLIAM P. SCHWEITZER
HANGS UP ELEVEN "POSSIBLES"
at* MAPLEWOOD, N. J., *Rifle Club Shoot

At the January 24th shoot of the Maplewood (N. J.) Rifle Club (locally known as Paddy O'Hare's Rifle Club), William P. Schweitzer, shooting from the 55-yard mark, scored eleven clean "possibles" on German Ring targets with U. S. .22 N. R. A.'s.

Mr. Schweitzer's performance is remarkable not only because of the eleven perfect scores, but for the almost perfect grouping shown by several of his targets. Besides the the highest order of marksmanship behind the highest quality of ammunition could have a hand in this.

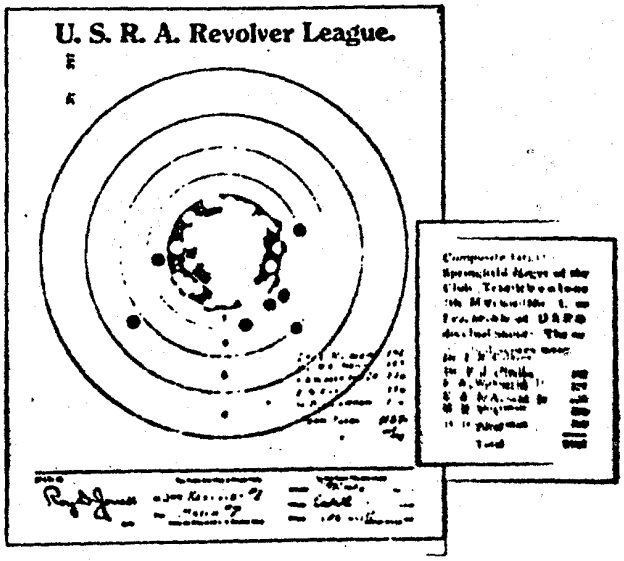

The [illegible] shot shows his skill not only in what he does in the firing period, but in the selection of his ammunition. The choice of the boys shoot a close race, very often U. S. N. R. A.'s.

BULLETS OUTSCORE ARROWS

IN SPECIAL MATCH OF EXPERTS

[illegible] Beat at End of 21 "Shot" Match at 50 Yards with Score of 567 to 550

In a unique match at Monument Beach, Buffalo, recently, Captain Paul A. Shepherd, coach of Buffalo Police Pistol Team, defeated Frank Hoench, four-time Champion, 567 to 550, each using his own weapon at 50 yards on a standard American pistol target with a three-inch bull's-eye.

The Hoench-Shepherd match was preceded by a similar competition indoors during the past winter, when Mr. Hoench challenged and beat a pistol shooter of the Buffalo Police Department at 60 feet.

This match was followed by another indoor match at the same distance, which brought Mr. Hoench and Captain Shepherd together for the first time, the latter winning the event.

As a result of these, the Shepard match on an outdoor range was staged with the results indicated above.

Captain Shepherd used [illegible] Colt .22 N. R. A. Target Rifle equipped with a magnifying peep rear sight, at 50 yards, in a test recommended by his marksmanship as well as by the handicap accuracy of the ammunition he chose.

The shells that WON the 32nd GRAND AMERICAN HANDICAP

The 32nd Grand American Handicap (1931) was a U. S. Ammunition event. Not only did the winner, the Reverend Garrison Rochuck, of McClure, Ohio, use U. S. Trapheads, but 3 out of the first 5 places went to shooters of U. S. Climax and U. S. Defiance Shells.

Keep in mind these significant facts when you buy trapheads this year.

CORE HEAVILY IN EARLY STATE SHOOTS!!

Reports from Nine States Show Many Titles Falling to Guns of U. S. Users

● Some gunners prefer Climax trap loads—some Defiance—that's a matter of choice. But it's a matter of record that U. S. trap loads—Climax or Defiance—have helped many a man or woman to championship standing and helped many a champion stay champion. You shoot the best when you use U. S.

This 1265x1300
SHOULD *establish a record*

. . . What do you say?

"Bill" Lambert, of Oklahoma City, Okla., shooting U. S. Climax, misses only 35 out of 1300 MIXED targets in Texas and Kansas State Shoots.

● "Bill" Lambert has been shooting for some time and is well known throughout the Southwest as an expert. He broke 298 straight on the Texas State Shoot. He participated in a total of 850 on the two tournaments. But the best he, and perhaps one of all who has competed since the Texas and Kansas shoots, did at a total of 1300 targets was to break 1265 . . . in MIXED targets, too!

That was 97 per cent, with only 35 targets missed in all. It is a record, calculation shows, never equaled, considering day in and day out performance. This means, also, that "Bill" Lambert's choice of ammunition . . . U. S. Climax Trap Shells . . . has the unbeatable reputation that surely the experienced shooter will place most

C. A. BOGERT BREAKS 773x800
at OKOBOJI INDIAN SHOOT

● At the annual meet of the Okoboji Indians held at Okoboji, Iowa, June 16-17, C. A. Bogert, of Kewaskum, Wisc., was high on 800 targets breaking 773x800. His score on 650 16 yard targets included in the 800 mentioned above was 533. His best runs during the shoot were 116, 127 and 200. He used U. S. Climax Trap Shells throughout the shoot.

● Shoot U. S. Trap Shells this year . . . the brand that won the 32nd Grand American Handicap. . . It is a significant fact that reports on nine early state shoots showed shooters of U. S. Ammunition well out in front.

Since the 32nd G. A. H...

It's been a US year at the traps

● In the fall of '50 the Reverend Emerson Bentley of Mt. Clair, Ohio, put on shooting shows and smashed through the hottest clays competition to win the 32nd Grand American Handicap with U. S. Shells. Then last summer U. S. shooters made it three out of the last five places in this annual American classic.

If that isn't enough to demonstrate the straight shooting, smashing power of U. S. Shells, take a look at recent New England records. U. S. shooters won the State Singles championships in Massachusetts, in Maine, in Vermont and in New Hampshire. In the 16 important championships in these four states U. S. shooters won 12, and tied for both guns in 2.

In addition, U. S. shooters topped scores consistently in state shoots in other parts of the country—on the Pacific Coast, in the Middle West, South—all over. Take a look at the shooting performances listed below and opposite.

Some champions prefer Clones trap I others—some Orbaner. That's a matter of choice. But it's noteworthy that a host of champions insist upon U. S.
