SAFETY ASPECTS OF PROJECT REQUEST FOR BRAKE LINING FABRICATION AT CYCLEWELD

We wish to advise that we have checked into the safety aspects of the subject Project Request, and have discussed the industrial hygiene problems with Don Fowler.

In our opinion, this request provides for the mechanical features, such as ventilation, sprinkler protection, and carbon dioxide systems that are required to make a safe operation. The Industrial Hygiene Department informs us that they have no objections to the installation.

In general, the operations that will be performed in the proposed brake lining set-up are very similar to existing operations and hazards in the Cycleweld cement production.
