Monsanto

JAN 20 1977

FROM (NAME & LOCATION): J. C. Weber - B2SK (St. Louis)

DATE : January 20, 1977

SUBJECT : CENTRAL FOUNDRY DIVISION

REFERENCE :

cc: H. N. Brandstetter
J. C. Larkin
C. Paton

TO : J. J. Roder

In your memo of January 17, you mentioned that you sent Central Foundry a copy of the electrical industries commission report. This is a new one on me and I am not sure what you are referring to. The only list I know of is the one EPA put together which lists firms that are acceptable for PCB disposal. Enclosed is a copy.

In this list there are several firms which Central Foundry should consider. One, Nuclear Engineering Company, Inc. and the Rollins Environmental Services. However, it is up to Central Foundry to make their own arrangements and to satisfy their concerns on whether it is adequate for their use or not. Of course, the best disposals is to incinerate the product. If you land fill, there is a possibility that it will come back to haunt you.

Monsanto's position is that we do not approve of any disposal sites. We do inform the customers of what is available. Again, it is up to Central Foundry to make their own arrangements.
