YOU CAN'T FOOL THE WEATHER

...with a 'CHEAP' Paint!

"CHEAP PAINT"
AFTER 1 YEAR

DUTCH BOY
AFTER 5 YEARS

**...why spend your money
to PROVE it can't be done?**

[illegible][illegible][illegible]

I wrote to the postmaster with the initials H. W. White and got, "I am sorry, but that they don't work as yet, but we can show by gradual stitching and so on."

... such a simulation for the most...
... for the most...
... and...
... for the most...

There is a common tendency to regard the young of all species as a group of parents and to have for them "the little flock, at our mercy" attitude. "They are little," they are small, weak, and in need of the ever-memorable aid for growth. While it is true that the young need a considerable amount of help, the parent must not over-protect and smother the young. The young must be able to fend for themselves, and the parent must not be too much concerned with the young's growth. A good parent, before the young, must be firm.

You'll find that the more you know about the life and times of the people who lived in the past, the more you will understand the people who live today. You'll find that the more you know about the life and times of the people who lived in the past, the more you will understand the people who live today.

Did you make this mistake 2 YEARS AGO ?

"Cheap" paint is a costly error
which can't be covered up...
It must be burned off!

After the weather has had a chance at it, you can't mistake a "cheap" paint job for one in which Dutch Boy White Lead was used. Look at the example shown on the cover of the right-hand photograph.

Our proprietors made the mistake of painting a 97% "cheap" paint on his house. Now, before he can repaint, he has to dig down a foot more for the reason of and scrape away a half inch of the old paint. And he has to meet the extra cost of a new painting team.

Because he has lived in a house covered with the remains of his "cheap" paint... cracked, scaled, and flaked away in sheets and patches. His mistake has degraded every room he lives in.

What a contrast the Dutch Boy job will! Paint made with Dutch Boy White Lead does not crack and scale... it wears away uniformly by gradual chalking, a process that leaves a perfect foundation for the new paint, without any burning, scraping or special preparation.

The only sure way to avoid mistakes in painting is to choose both a paint and a painter of established reputation. That means Dutch Boy as paint, and the experienced painter, proven because of his proved durability, and because he can see it to the right composition for your particular home, and can test it to the same end of quality.

It dollar-saving approach does not say that dollar-a-can paint is cheaper than the free book shown at right, read but in.

Compare these **2 PAINTS**

Then you see
why "CHEAP" paint
never pays!

① Sound of a "thrap" point job and a thrap they job
only be one . . . not the day they were finished, but
after a few years have passed? You can even tell you that
the "thrap" point has been in one or two of the saving
is promised. You realize time that such point crack
and takes an ev . . . runs up a heavy bill for burning
and repairs. And the new morning, too, at required time.

Now the big difference shows in the two photographs above right. Here, one home-owner thought he saved \$12 on his "cheap" paint job. The other paid too much at the store for Dutch Boy. But now he's actually money ahead because his paint job is still good while the "cheap" paint must be burned and scraped which will cost the owner \$10 before a can be repainted. In addition he will have the expense of a new priming coat.

Don't Boy White. Leaf paper doesn't crack and scale. It resists the weather and wears down stubbornly by gradual chalking that leaves a perfect surface for repainting... no need of costly burning and creosote, and no need of a new pruning coat, either.

To get the kind of paint that combines long-time protection with low cost, call in a good painter . . . one who uses DuPont White-Lead. He will use the paint to suit the requirements of your house, and that is to the point where you want.

The book shown below will help you to avoid costly errors. It's worth reading for and reading before you paint again.

PAINTING THIS YEAR?

"... How soon will you have to do it again?" the DUTCH BOY asks...

12747-0000

Expected to run and run, then and there, "cheap" paint quickly shows up for what it is. It breaks down. It cracks. It washes away. You soon have to paint again.

See the measured-in years contrast between that bond of paint and Dutch Boy White Lead paint, illustrated in the two photographs at the right.

The property can't be put out. "Cheap" paint made a small saving at first. But within a year her paint job went to pieces. Already he must repaint and that's not all. The old paint must be scraped and scraped off—always an expensive job. Furthermore, a new priming coat will be needed on another surface. Truly, "cheap" paint costs too much.

NATIONAL LEAD COMPANY

100 Broadway, New York 10, N.Y.
Sole U.S. and Canadian Distributors
Dutch Boy White Lead Paints and Enamels
Dutch Boy White Lead Paints and Enamels
Dutch Boy White Lead Paints and Enamels
Dutch Boy White Lead Paints and Enamels

What a difference with the Dutch Boy job. It costs a little more, at first, it's true. But even after five years, it's still in good condition. It has already saved him money and time and a good deal of trouble. And it won't need repainting, excepting for a new priming coat at repainting time. Dutch Boy does not crack or scale or wear down substantially by gradual chalking, leaving up the surface for repainting.

To make sure of a long time paint job, choose a painter who has built a reputation for good work... and who uses Dutch Boy White Lead to uphold that reputation. He knows it specially to suit the condition of your

house. He mixes it to the exact color you specify. And he gives you a paint job that lasts for years, and saves you and money.

Send for booklet illustrated at left. It will help you save money on your next painting job.

Collier's, The National Weekly

BEWARE... the UNSEEN EXTRAS Hidden in a "Cheap Paint" job

... You don't pay in full for a "Cheap Paint" job... until you have paid for burning it off!

The low price of a "cheap paint" job is a big temptation... when you stop to add up all the extras you'll have to pay. That's the trouble with a "bargain" offer. It leaves out future charges. Unannounced, but none the less, these extra items more than wipe out your expected saving.

You can police how the additional costs mount up, and how soon they must be paid, by a moment's study of the photographs at the right. You see there how one home-owner figured he saved 37% when he painted... and how his "saving" turned into a big expense in just two years.

You can't foresee the total cost of a "cheap paint" job at the time it's done. But it can't hang before you realize that it will cost you much. All too soon, cracks make their appearance on the paint film, opening it up to moisture on the wall. Then the paint begins to scale. The damage spreads. In no time your whole job is a total loss, not to say an "eyesore", and you have to repaint.

But before you repaint, there's the heavy expense of burning and scraping. And of course

repainting cost as well.

What a contrast when you see Dutch Boy White Lead Paint made with slith that doesn't crack and scale but wears down a wall without being gradually chalking away a smooth, unbroken foundation for the new coats. Dutch Boy needs no burning off... and consequently no new painting cost... when the job is repainted.

The surest way to guard against expensive extras, and to avoid the needless having to repaint all over again, is to choose your painter as carefully as you choose your paint. He will welcome your vote in favor of Dutch Boy. His experience makes him that Dutch Boy upholds his reputation for long lasting and satisfactory work.

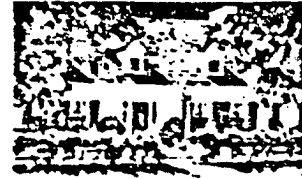

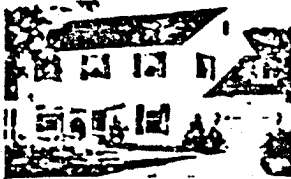

He knows he can mix Dutch Boy to meet the requirements of your house, and that he can use it to the exact colors you have chosen.

Send for the booklet shown at right. The time to read it is before you paint.

"CHEAP" PAINT after 2 years	DUTCH BOY after 3 years
This "cheap paint" job cost \$100 two years ago. Today the owner must pay \$1.00 more for burning and scraping before he repays his cost \$100, or \$200 a year he must have to pay the same cost of a new painting job.	This house in the same area being repainted cost \$275 to paint. Eight years, the annual cost is only \$25. But this job is well paid for with its cost and for him, there'll be no "extra" cost" in this paint job.

CARTER ALL-PURPOSE

Superior White Lead in a new, available form
in the new, improved, quick-drying form

Here's another opportunity
to show your customers that
you carry the latest and best
in paint materials.

A chance to bid your customers' re-
quirements with a complete line of
products, all at the same time, all
made for the same price, and
all at the same high Dutch Boy
quality.

More than that, a chance to sup-
ply your stock. For the new, All-
Purpose White Lead should allow
much easier carrying and
handling of stock, a great con-
venience which also points out the
advantage of.

Painters, too, quickly see the ad-
vantage of the new Dutch Boy All-
Purpose White Lead. It is
easy to use, and when it is applied
it is suitable for both inside and outside
painting, giving perfectly and
durable, long-lasting gloss.

The new Dutch Boy is undoubtedly
one of the very highest grade and
reputably developed for testing

DUTCH BOY OFFERS...

*In Improved Soft Paste White-Lead
A Line of New-Type Colors-in-Oil
A New Liquid Drier!*

THE THREE NEW DUTCH BOY PRODUCTS

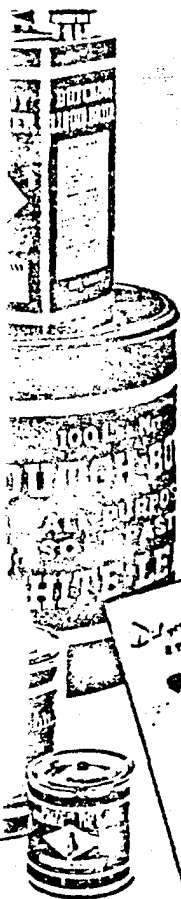

**1. DUTCH BOY ALL PURPOSE
SOFT PASTE WHITE LEAD**
A new type soft paste which is able
to be used for many purposes, and is
used for many of the same reasons
that make it so well known. It is
used for painting, pasting, white lead,
putty, and other uses. It is a new
product, and is a new type of soft
paste.

2. DUTCH BOY COLORS-IN-OIL
The new type colors-in-oil are
able to be used for many purposes,
and are used for many of the same
reasons that make it so well known.
It is used for painting, pasting, white
lead, putty, and other uses. It is a
new product, and is a new type of
colors-in-oil.

3. DUTCH BOY LIQUID DRIER
A new type liquid drier which is
able to be used for many purposes,
and is used for many of the same
reasons that make it so well known.
It is used for painting, pasting, white
lead, putty, and other uses. It is a
new product, and is a new type of
liquid drier.

CARTER ALL-PURPOSE

Soft Paste White-Lead
Carter White-Lead is also now available in
the new all-purpose, quick setting form.

One of the new series of Dutch Boy
advertisements appearing to full value
in commercial advertising and spreading
the knowledge of Dutch Boy quality.

Here's another opportunity
to show your customers that
you carry the latest and best
in paint materials.

A chance to fill your customers' re-
quirements with a complete line of
products, all of the same family, all
made for use with each other, and
all of the same high Dutch Boy
quality.

More than that, a chance to com-
plete your stock. For the new All-
Purpose Soft Paste White-Lead is
made of the same material as the
hard material of the new, and is
used for many of the same reasons
that make it so well known.

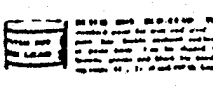

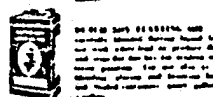

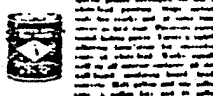

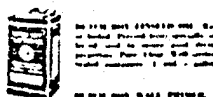

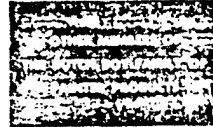

Painters, too, quickly see the ad-
vantages of the new Dutch Boy All-
Purpose Soft Paste White-Lead. It is
quick-setting, and is a new type of
soft paste, and is a new type of
white lead.

The new Dutch Boy Liquid Drier is
one of the very highest grade and
especially developed for testing

white-lead paint. They require no
thinning... you add them to paint
just as you take them from the can.
They "dry" faster, better paste, and
they make this possible, and they
disperse quickly... without lumping
or streaking. They are high in test-
ing strength and absolutely true in
color tone. In addition to these ad-
vantages to the painter, they have
this important advantage to the
merchant: they are only four sizes
... half pints, quarts, gallons, and
kegs. Think what this means to
the simplification of stock and com-
munity of handling.

Finally, there is the new Dutch
Boy Liquid Drier. It is properly bal-
anced and is manufactured espe-
cially for painters' use. It will not
cure or cure the paint. You can
depend upon it to give character to
Dutch Boy performance.

Write to us or send for such other
for further information about these
three new prod-
ucts.

IN EACH BOX 100 CUBIC INCHES
SOFT PASTE WHITE LEAD

A new type white paste which, in addition to being quick mixing, can be used for outside flat work as well as inside work. It contains no lead which is of great benefit and a better temperature resistance than the old type.

BOTH FLAT AND GLOSS paint jobs ...WITH THIS QUICK-MIXING "LEAD"

Dutch Boy All-Purpose Soft Paste White-Lead

New type white paste, quick mixing, easy to use, and most important of all, it is so good that you can use it for both flat and gloss paint jobs, both inside and outside.

This new product, Dutch Boy All-Purpose Soft Paste White-Lead, is of the quick-mixing type, and can be used for both flat and gloss paint jobs.

Through a special mixing process, Dutch Boy All-Purpose Soft Paste White-Lead becomes extra smooth, allowing which a small amount of temperature is added. This produces extra "softness" that makes mixing easy and quick. It also produces

an immediate white finish, and a long lasting paint.

The development of this All-Purpose white paste, should allow only one paint, instead of white lead and the old type, with consequent simplification of work.

In addition to what is all the Dutch Boy line includes, the other products described below. It is a line of high-grade paint materials, manufactured especially for painters' use. Derived from painters, it has volume, practicality, beauty, and there is no other in its class among all the paint brands the Dutch Boy line has.

new DUTCH BOY products

...to further insure high quality in your white-lead jobs

THE NEW DUTCH BOY WHITE LEAD...
 a perfectly balanced, painter's choice of...
 characteristically Dutch Boy quality. Neutral...
 color, full past, past, past, yellow.

• The famous Dutch Boy Family of...
 painter's products is now broader than ever...
 in its make-up.

That's the big paint news of 1933...
 a new group of white-lead products...
 comes to the painter.

It's important, first, because it...
 brings you an improved white-lead...
 white-lead. It's important, second...
 because the addition we found out...
 the Dutch Boy line that you can...
 now do painting work, other than...
 you've done, that is, Dutch Boy...
 even down to the color-matched and...
 the drive.

New product No. 1 is Dutch Boy...
 (1) 15 H.P. 154. With Dutch White...
 Lead. Note particularly the word...
 "All Purpose". Here, for the first...
 time, is a quick-drying white-lead...
 which is equally suitable for work as well...
 as outside use. It not only gives a...
 fine gloss but also protects...
 out a trace of a chance to fade...
 You'll like also its greater white-...
 time, its greater smoothness, the...
 easy-brushing paint it makes. Now

this is no need to say, two goods...
 of kind in the shop. This new series...
 all purposes and, at the same time...
 brings you the advantages of easy...
 mixing.

New product No. 2 is Dutch Boy...
 (2) 15 H.P. 154. A line of white-lead...
 the very high-grade white-lead...
 is hoped for in the white-lead paint...
 These are colors that require no...
 thinning... you add them to paint...
 just as you take them from the can...
 These are, "short", buttery, paste...
 consistency makes it as possible...
 and then, disappear quickly... without...
 bumping, without streaking. When...
 over, you'll find them back on brush-...
 ing strength and absolutely true in...
 color tone.

New product No. 3 is Dutch Boy...
 (3) 15 H.P. 154. This is a perfectly...
 balanced white-lead, manufactured...
 especially for painter's use. It is...
 firm, strong, the best drive that it...
 is possible to make.

We ask you to try these three new...
 Dutch Boy products... to judge them

on their merits. Then you do see...
 the more time you will continue to...
 use them and make every job an...
 all Dutch Boy job.

(Other Members...
 of the Dutch Boy Family of...
 Painter Products)

3 NEW DUTCH BOY PRODUCTS

...that further insure high quality in white-lead paint jobs

1. A new line of better looking, better quality white-lead paint products, these new members have been added to the famous Dutch Boy family of paint products.

The addition of only three of the new products to the Dutch Boy line that has been known for many years, makes it possible to say that the Dutch Boy family is now the largest and the best.

The first new product is Dutch Boy All Purpose White Lead. This is a new paint on which is based "lead" which is a new discovery, especially suitable for use in white-lead paint. It is a new discovery, especially suitable for use in white-lead paint. It is a new discovery, especially suitable for use in white-lead paint.

The second new product is Dutch Boy All Purpose White Lead. This is a new paint on which is based "lead" which is a new discovery, especially suitable for use in white-lead paint. It is a new discovery, especially suitable for use in white-lead paint.

The third new product is Dutch Boy All Purpose White Lead. This is a new paint on which is based "lead" which is a new discovery, especially suitable for use in white-lead paint. It is a new discovery, especially suitable for use in white-lead paint.

While most paint products are all Dutch Boy products, it is a new way to select the brand in white-lead paint jobs and in many other cases.

WHAT PAINT IS BEST FOR METAL?

THE "SAUCER TEST" WILL GIVE YOU THE ANSWER EASILY...FAIRLY...AT NO COST

Those responsible for the maintenance of iron and steel structures have discovered a new test to determine which paint gives the most properly the longest, most economical protection against rust and corrosion. They are comparing one paint with another by means of the "Saucer Test". This test gives you the answer to the question of which painting equals your red lead, when it comes to a show-down on durability. The "Saucer Test" appears to be the last word in paint tests in most difficult fields because it enables you to compare two paints side by side on the same piece of metal, under conditions which closely approximate those of actual service. No matter what your metal painting problem may be, you will find the answer in the "Saucer Test" which will show you what you may expect of the paint you are considering. The "Saucer Test" will enable you to compare the durability of Dutch Boy Red Lead with any other paint. It will prove that this paint is the most effective rust-preventing treatment will protect your property better. In a long series of tests conducted by a leading Southern railroad, the "Saucer Test" proved that your red lead outlasted the other paints tested by 1 to 1, 2 to 1, 3 to 1, and 4 to 1 in some cases. The "Saucer Test" is the answer.

A NEW EASY TEST METAL PAINTING

What paint will give your iron and steel property maximum protection against rust? How can you handle large or irregular work with the trouble and expense of painting and repainting entire structures? You'll find the answer to these questions in the "Vagney Test" an important step way of comparing the lasting qualities of metal protecting paints like no other.

The "Vagney Test" permits you to study the durability of different paints under practically the same adverse conditions that attack iron and steel in use. In days, too, you can determine in a few months which is the most durable paint for metal.

Railroads have used the "Vagney Test" to study the effect of locomotive smoke and water on metal protecting paints. Others have employed it to learn which paint best protects the girders of bridge spans from salt water rust. In some of these studies, it was found that paint and lead outlasted all other paints tested by 1 to 1 in salt water, and had been found to outlast equally made metal.

You get the details of the "Vagney Test" yourself. Ask it, you can get Dutch Boy Red-Lead against any other paint you wish to test. Then you can see how Dutch Boy Red-Lead gives greater protection against weather, smoke, salt water or other destructive agents which attack iron and steel. Just send the coupon for the free "Vagney Test" booklet.

The SAUCER TEST

...shows you how to

SAVE MONEY ON METAL PAINTING JOBS

Are you using the best paint to protect your metal structures against corrosion? How does the paint you are using stand up to comparison with other paints which are proved by the "Saucer Test" to be the most durable metal protecting paint without the expense of painting and repainting roller structures?

Let the "Saucer Test" give you the answer to these questions and save you money on your painting. Quickly, accurately, at no cost, this important test will let you to study the effects of rain, sun, heat, salt air, smoke or any other corrosive agent on metal paints. With the "Saucer Test" you can stage a miniature representation of the conditions which constantly surround your metal property and prove conclusively which paint protects your investment longest and saves you most money in the long run.

Backed by the experience of others, you will find that Dutch Boy Red Lead is the

most durable and economical paint because for your time and cost the evidence which makes the "Saucer Test" the basis of all metal paint purchases is proof that red lead stands up against the action of household chemicals and water far longer than other paints tested.

With the "Saucer Test" at our expense, learn how Dutch Boy Red Lead saves you money. The coupon will bring you a booklet, set of testing instructions and an excellent metal painting manual free.

MAKE
Extra
PROFITS

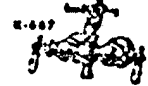

K-907-S

**BY MAKING HOME CALLS
INSTEAD OF WAITING
FOR PHONE CALLS**

Don't wait for emergency calls, but meet the emergency by making calls. Every fixture with single faucets offers you an opportunity for profit by selling "Standard" Double Duty Fitting. Call upon home-owners now and tell them the advantages of double faucets to replace their old single faucets.

**REPLACE OLD BRASS WITH
"Standard" DOUBLE DUTY FITTINGS**

Whether you only put in new brass or make the complete fixture, the kind of brass used makes a big difference! Point out to your customers that installation costs are no higher for "Standard" Double Duty fitting than for others less modern. Yet, these fittings make possible tempered running water, provide extra convenience, extra service and extra satisfaction to customers—extra profits to you. Many plumbers are making these extra profits by selling "Standard" Double Duty fittings at every opportunity on modernization jobs.

THIS GOOD NEWS

Dutch Boy White-Lead Paint... Now Only

LOW BRIDGE WHITE LEAD PAINT

\$215°
per gallon!

Take advantage of Dutch Boy's low cost now because with Dutch Boy you can do more and more for your money. Dutch Boy is not a money-saver. See actual photographs at left. They show what an apparent saving on low grade paint often turns out to be for the farm owner who turns his back on the well known fact that Dutch Boy White-Lead outlasts poor paint.

Dutch Boy does not crack and scale. It does not peel away and expose the surface it is put on to protect. No matter how the weather and wear it is not weakened by a gradual chalking that leaves a patchy surface for repainting. And it is always ready for the next time you repaint.

Never before has Dutch Boy White-Lead been so low. Now available in all purpose soft paste form, you get the necessary economy and in a soft paste paint you get the best of both worlds.

From this on Dutch Boy ALL-PURPOSE WHITE LEAD PAINT can mean prompt and business on the part of the farmer and the contractor. And your money is well invested when you get the best of both worlds with Dutch Boy White-Lead.

NATIONAL LEAD COMPANY

NATIONAL LEAD COMPANY

Lined Products Division

SOLE AGENTS FOR THE UNITED STATES OF AMERICA
111 BROADWAY, NEW YORK, N. Y.

PRODUCTS

Homogeneous Lead Lined
Vacuum Apparatus, Evaporators,
Tanks, Steam Jacketed
Kettles, Acid Feeders,
Digesters, Autoclaves, Agitators,
Pressure Still, Treater Drums and Tank Cars.
Homogeneous Lead Coated Heating or Cooling
Coils; also Agitating Apparatus of any design.

ADVANTAGES OF PROCESS

The chemical lead lining of reacting vessels and tanks, kettles and impellers, bonded to the base metal, which may be steel, iron, copper or brass, forming a dense and impervious protective surface.
A strip of steel coated with chemical lead by this process can be mechanically treated to form a lead lining.

TOP OF STEAM JACKETED TANK WITH LEAD LINED INTERIOR. THE LEAD LINED TANK IS USED IN THE CHEMICAL INDUSTRY FOR THE STORAGE OF ACID AND OTHER CORROSIVE LIQUIDS. THE LEAD LINED TANK IS USED IN THE CHEMICAL INDUSTRY FOR THE STORAGE OF ACID AND OTHER CORROSIVE LIQUIDS.

with the highest efficiency between the lead and the steel.

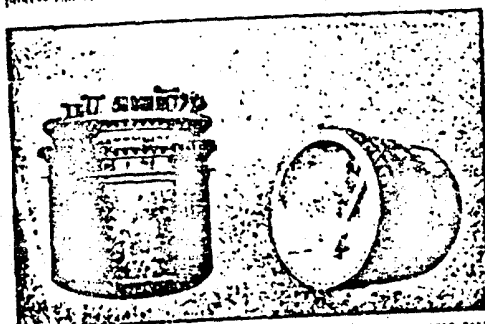

Chemical lead lining, surface of lining or coating, is resistant to acids, alkalis, molten caustic soda, and other corrosive liquids, and is suitable for high temperatures.

Our improved method of application results in a lead that will not come loose under any form of shock, vibration or pressure.

The chemical lead lining is not subject to deterioration within a few degrees of the melting point of the lead.

All homogeneous lead equipment is fabricated to your individual specifications. In this connection, the services of our engineering staff are at your disposal either for consultation or for submitting detailed specifications based on your specifications.

Rich Boy Products

Rich Boy #11 Porcelain White Paint—This is a white paint which has been specially formulated for use on all surfaces. It is a heavy body paint which will stand up to the most severe weathering conditions. It is a true white paint which will not yellow or fade with age.

Rich Boy #12 White Lead and Oil—This is a white paint which has been specially formulated for use on all surfaces. It is a heavy body paint which will stand up to the most severe weathering conditions. It is a true white paint which will not yellow or fade with age.

Rich Boy #13 White Lead and Oil—This is a white paint which has been specially formulated for use on all surfaces. It is a heavy body paint which will stand up to the most severe weathering conditions. It is a true white paint which will not yellow or fade with age.

Rich Boy #14 White Lead and Oil—This is a white paint which has been specially formulated for use on all surfaces. It is a heavy body paint which will stand up to the most severe weathering conditions. It is a true white paint which will not yellow or fade with age.

Rich Boy #15 White Lead and Oil—This is a white paint which has been specially formulated for use on all surfaces. It is a heavy body paint which will stand up to the most severe weathering conditions. It is a true white paint which will not yellow or fade with age.

Rich Boy #16 White Lead and Oil—This is a white paint which has been specially formulated for use on all surfaces. It is a heavy body paint which will stand up to the most severe weathering conditions. It is a true white paint which will not yellow or fade with age.

Rich Boy #17 White Lead and Oil—This is a white paint which has been specially formulated for use on all surfaces. It is a heavy body paint which will stand up to the most severe weathering conditions. It is a true white paint which will not yellow or fade with age.

Rich Boy #18 White Lead and Oil—This is a white paint which has been specially formulated for use on all surfaces. It is a heavy body paint which will stand up to the most severe weathering conditions. It is a true white paint which will not yellow or fade with age.

Rich Boy #19 White Lead and Oil—This is a white paint which has been specially formulated for use on all surfaces. It is a heavy body paint which will stand up to the most severe weathering conditions. It is a true white paint which will not yellow or fade with age.

Rich Boy #20 White Lead and Oil—This is a white paint which has been specially formulated for use on all surfaces. It is a heavy body paint which will stand up to the most severe weathering conditions. It is a true white paint which will not yellow or fade with age.

General Painting Specifications

1. All surfaces to be painted shall be free from dirt, grease, and other foreign matter.
2. Surfaces to be painted shall be dry and free from moisture.
3. Surfaces to be painted shall be free from rust and scale.
4. Surfaces to be painted shall be free from peeling and flaking paint.
5. Surfaces to be painted shall be free from cracks and holes.
6. Surfaces to be painted shall be free from loose and crumbling material.
7. Surfaces to be painted shall be free from oil and grease.
8. Surfaces to be painted shall be free from acid and alkali.
9. Surfaces to be painted shall be free from salt and other crystalline deposits.
10. Surfaces to be painted shall be free from all other deleterious matter.

It is the policy of the National Lead Company to supply the best quality paint materials at the lowest possible price. We guarantee the quality of our products and the service of our salesmen.

(1) Primer—This is a heavy body paint which will stand up to the most severe weathering conditions. It is a true white paint which will not yellow or fade with age.

(2) Plaster—This is a heavy body paint which will stand up to the most severe weathering conditions. It is a true white paint which will not yellow or fade with age.

(3) Brick and Stone—This is a heavy body paint which will stand up to the most severe weathering conditions. It is a true white paint which will not yellow or fade with age.

(4) Stucco and Concrete—This is a heavy body paint which will stand up to the most severe weathering conditions. It is a true white paint which will not yellow or fade with age.

(5) Metal Work—This is a heavy body paint which will stand up to the most severe weathering conditions. It is a true white paint which will not yellow or fade with age.

The Paint and Its Application—(a) Preparation of Paint—The paint should be mixed in a clean, dry container. It should be stirred thoroughly with a clean, dry stick or rod. It should be applied with a brush or roller.

(b) Application of Paint—The paint should be applied in a uniform, heavy coat. It should be applied in a direction parallel to the grain of the wood. It should be applied in a direction perpendicular to the surface of the plaster, brick, stone, concrete, stucco, and metal.

(c) Finishing Material—This is a heavy body paint which will stand up to the most severe weathering conditions. It is a true white paint which will not yellow or fade with age.

(d) Applying the Paint—The paint should be applied in a uniform, heavy coat. It should be applied in a direction parallel to the grain of the wood. It should be applied in a direction perpendicular to the surface of the plaster, brick, stone, concrete, stucco, and metal.

Formulas

Formula for Rich Boy #11 Porcelain White Paint: 100 parts of white lead, 10 parts of zinc white, 10 parts of titanium dioxide, 10 parts of barium sulfate, 10 parts of calcium carbonate, 10 parts of magnesium carbonate, 10 parts of aluminum hydroxide, 10 parts of iron oxide, 10 parts of copper oxide, 10 parts of manganese dioxide, 10 parts of cobalt oxide, 10 parts of nickel oxide, 10 parts of chromium oxide, 10 parts of vanadium oxide, 10 parts of niobium oxide, 10 parts of tantalum oxide, 10 parts of hafnium oxide, 10 parts of zirconium oxide, 10 parts of yttrium oxide, 10 parts of lanthanum oxide, 10 parts of cerium oxide, 10 parts of praseodymium oxide, 10 parts of neodymium oxide, 10 parts of promethium oxide, 10 parts of samarium oxide, 10 parts of europium oxide, 10 parts of gadolinium oxide, 10 parts of terbium oxide, 10 parts of dysprosium oxide, 10 parts of holmium oxide, 10 parts of erbium oxide, 10 parts of thulium oxide, 10 parts of ytterbium oxide, 10 parts of lutetium oxide, 10 parts of scandium oxide, 10 parts of yttrium oxide, 10 parts of lanthanum oxide, 10 parts of cerium oxide, 10 parts of praseodymium oxide, 10 parts of neodymium oxide, 10 parts of promethium oxide, 10 parts of samarium oxide, 10 parts of europium oxide, 10 parts of gadolinium oxide, 10 parts of terbium oxide, 10 parts of dysprosium oxide, 10 parts of holmium oxide, 10 parts of erbium oxide, 10 parts of thulium oxide, 10 parts of ytterbium oxide, 10 parts of lutetium oxide.

1. The first part of the document is a list of names and their corresponding dates. The names are: "John Doe", "Jane Smith", "Bob Johnson", "Alice Brown", "Charlie White", "David Green", "Eve Black", "Frank Gray", "Grace Pink", "Henry Blue", "Ivy Yellow", "Jack Purple", "Karen Red", "Leo Orange", "Mia Silver", "Noah Gold", "Olivia Bronze", "Peter Copper", "Quinn Iron", "Ruth Tin", "Sam Lead", "Tina Zinc", "Uma Nickel", "Victor Platinum", "Wendy Silver", "Xavier Gold", "Yara Bronze", "Zoe Copper". The dates are: "1990-01-01", "1990-02-01", "1990-03-01", "1990-04-01", "1990-05-01", "1990-06-01", "1990-07-01", "1990-08-01", "1990-09-01", "1990-10-01", "1990-11-01", "1990-12-01", "1991-01-01", "1991-02-01", "1991-03-01", "1991-04-01", "1991-05-01", "1991-06-01", "1991-07-01", "1991-08-01", "1991-09-01", "1991-10-01", "1991-11-01", "1991-12-01", "1992-01-01", "1992-02-01", "1992-03-01", "1992-04-01", "1992-05-01", "1992-06-01", "1992-07-01", "1992-08-01", "1992-09-01", "1992-10-01", "1992-11-01", "1992-12-01".

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

The following is a list of the names of the persons who have been appointed to the various committees of the Board of Directors of the Bank of the City of New York, for the year ending December 31, 1900:

The Bank of the City of New York Board of Directors Committee on the part of the Board of Directors to examine the accounts of the officers and employees of the Bank, and to report thereon to the Board at its next meeting.	The Bank of the City of New York Board of Directors Committee on the part of the Board of Directors to examine the accounts of the officers and employees of the Bank, and to report thereon to the Board at its next meeting.

to find out that in the second specific branch they found the same material in the same area and that it was the same.

Formulas for Order Work

If the type of printing work to be done is not covered here, we shall be glad to furnish the proper formulas for it if you will address a request for literature to our sales office, 121 Nassau Street, New York, N. Y.

Booklets on Painting

[illegible]

Figure 1

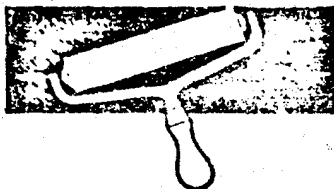

1. The first step is to determine the purpose of the research. This is done by asking the following questions: What is the problem? Why is it important? What are the objectives of the study?

If the report of the witness is to be taken as true, it is not unusual here, as it is in other parts of the country, for the people to be so ignorant of their own rights as to be unable to protect themselves from the lawless actions of the police.

Clearer tints... the printer's need

AND THE INKMAKER'S OPPORTUNITY

• There is a new, better printing colored ink, greater demand available. The printer need is the inkmaker's opportunity. We using Titanox. Titanox has a new color printing ink with excellent tint values... Titanox. It has four particles size, high opacity, unusual brightness. Since it is chemically stable and inert, Titanox will not react with other ingredients in the ink or in printing processes and therefore cause discoloration or mottling. The exceptional fading power of Titanox is 10 to 100 higher than other commonly used pigments also helps eliminate the discoloration from excessive pigmentation, such as shall show and your attention... Let us cooperate with you in adopting Titanox. It is your business. Full information is yours for the asking. Write today.

Blanket the stock
say printers...

(That means inks
must have greater
hiding power!)

When the printer demands ink that can completely blanket the stock, when the color must appear solid and uniform when the ink is spread, that's when a printer appreciates Titanox. Titanox H offers you the full hiding capacity properties of the most stable and uniform ink color, exceptional opacity, full spectral brightness, full non-yellowing color, full good looking appearance. These properties are so effective, colorable in making light colored inks for the most exact large area reproduction work. Titanox H won't mix with other ink ingredients and cause spotting or muddiness. Let us work with you in improving your ink. Write today for the color information.

Compare these properties of Titanox-C with those of other paint pigments.

COMPARE THESE PROPERTIES OF **TITANOX-C**

WITH THOSE OF OTHER
PAINT PIGMENTS.....

Until you have analyzed the many advantages of Titanox-C, you cannot estimate how much it can help you in the manufacture of white, flat wall paints, glass milks, enamel undercoats and 4 hour enamels. Ask yourself this important question: In what other single pigment will I find all the following properties combined?

1. High opacity
2. Chemical resistance
3. High light reflecting value
4. Chemical stability
5. Neutral whiteness
6. Remarkably particle fineness
7. High bulking value

More and more users are discovering that Titanox-C is extremely helpful in producing the whiteness of white paints and the long-lasting flatness with which transparency & security, strong paint manufacturers have also discovered that because Titanox-C is so easily dispersed it reduces grinding time considerably... and that in some vehicles, the use of Titanox-C makes grinding entirely unnecessary. Get in touch with our nearest branch for the full information and proof.

Consider the new low prices on Titanox-C

CONSIDER THE NEW LOW PRICES ON **TITANOX-C**

Recent price reductions on Titanox-C (calcium base) provide an exceptionally important reason why paint manufacturers should study the various ways in which this modern pigment will reduce costs and at the same time improve quality.

Users now appreciate that Titanox-C saves grinding time. Because of its dispersive properties, it shortens the manufacturing operations. In many instances grinding has been entirely eliminated by using Titanox-C.

Here are other important reasons for adopting Titanox-C. It has high bulking value, exceptional hiding power, and the high degree of whiteness so essential to quality paints. The fast growing popularity of Titanox-C is ample proof that this economical pigment makes paint that meets the demands of the discerning buyer.

Write today for new low prices on Titanox-C. Full information will be gladly furnished without obligation.

ADJUST YOUR
PAINT FORMULAS
TO PRESENT-DAY
DEMANDS....USE

TITANOX-B

Now, more than ever, leading paint manufacturers are realizing that Titanox-B (Titanium Dioxide) enables them to offer a product that's in tune with present-day demand. That is one of the reasons for the popularity of Titanox pigments, and constantly increasing Titanox sales. • Test after test—in the laboratory and the factory—have demonstrated the value of Titanox-B in paint manufacturing. This modern pigment is productive of the whitest paints ever made—paints that not only are white when first applied but that maintain that whiteness through years of protective service. Such paints, furnishing the qualities demanded by exacting buyers, can be economically formulated with Titanox-B and profitably sold at a moderate price.... Titanox-B possesses a combination of desirable features that are found in no other paint pigment. Witness its high bulk value, uniform particle fineness, chemical stability and inertness, ready mixing qualities, low specific gravity, high hiding power and moderate price. • Meet today's paint requirements with Titanox-B. Let us send you detailed information and prices.

MANUFACTURERS ARE GETTING WHITER
PAINTS AT LOWER COSTS WITH

TITANOX-B

Many paint manufacturers, seeking to improve their products and at the same time to reduce costs, have discovered in Titanox-B the ideal pigment. They have found that this modern pigment not only produces the whitest paints ever made . . . but that Titanox paints retain their whiteness through years of service.

When you combine exceptional whiteness and chemical stability with other well known features of Titanox-B . . . high bulking value, uniform particle fineness, high hiding power, ready mixing qualities and moderate price . . . you have sufficient reasons for the fast growing popularity of Titanox-B. Alert manufacturers realize that with all these desirable properties, it is logical that Titanox-B paints should appeal to paint buyers everywhere.

Ask us to assist you to adapt Titanox-B to your paint formulas. Write for detailed information and prices.

**DO YOUR PAINTS
NEED GREATER
HIDING POWER?
OX-B
WILL HELP YOU...**

Paint manufacturers with reputations to maintain, must meet the present-day demand for increased hiding power in paints of all types. That is why so many of the larger companies have adopted Titanox-B (Barium Sulfate). These manufacturers, over a period of years, have proved to their own satisfaction that Titanox-B hides 40% to 170% better than other commonly used white pigments. Consequently, it provides greatly increased covering power without excessive pigmentation. Among the other distinctive properties that have made Titanox-B popular with leading paint manufacturers are:

1. Uniform particle fineness
2. Chemical inertness
3. Desirable dispersive qualities
4. High light reflective value
5. Moderate volume cost

Why not let Titanox-B improve your paints - give them 1932 selling points? Ask us to send you valuable data which will help you with your formulas. Write our nearest branch.

They're Beller..

• Paints made from pure paint colors, and even paint bases, will tell you that titanium (barium base) and titanium (chromium base) give paints a different appearance. • In the first place, by using titanium pigments you can produce the rich or luster and outside points that it is possible to make. And by using these tints, titanium gives a paint base. Titanium made with titanium pigments will retain their exceptional whiteness and clear colors through long periods of exposure. Paints made with titanium pigments do not darken over time. • It is in my mind that when you use titanium in your paint products, you are using a pigment widely known for its chemical stability, high boiling value, uniformity of particle size, high hiding power, ready mixing qualities and moderate price. In what other modern pigment can be found such a combination of desirable properties? • Ask us to recognize with you in adding titanium to your paint formula. Write for information and late 4-page brochure.

TRY TO MATCH THE BRIGHTNESS OF TITANOX-C PAINTS

COMPARE the wonderful light reflective qualities and high tinting strength of Titanox-C (ruthen base) with ordinary white pigments. You'll realize what a difference Titanox-C makes... what a brilliant, clear, velvet-like finish can be secured by using this remarkable pigment.

Each year witnesses an ever growing increase in the use of Titanox-C. Paint manufacturers are constantly discovering that Titanox-C helps produce whiter paints at lower cost. They also are finding that Titanox-C prevents discoloring and gives clearer tones as well as better brushing qualities in such popular products as interior flat wall paints, interior gloss whites, enamel touch-up colors and floor enamels.

From the standpoint of economical mixing and grinding, Titanox-C also offers important advantages. Due to its ease of dispersion, it reduces grinding time. In fact, when Titanox-C has been used with certain vehicles, grinding has been entirely eliminated.

Let us give you specific examples of how Titanox pigments can be used to solve some of your formulating problems. Write today.

**TITANOX-B
LEATHER
FINISHES
WON'T CAUSE
"SPOTTINESS"**

If you seek a way to obtain clearer, brighter tones in your finishes... If you wish to find a way to eliminate discoloring or spotting... Titanox-B (barium base) may help solve your problem.

Through the use of Titanox-B in pigment finishes, manufacturers are obtaining products that cover well even when thinly spread. These finishes leave the leather pores and open.

Titanox-B has exceptional hiding power and tinting strength. It is uniformly fine in particle size. Since it is chemically stable and inert, it will not react with residual ingredients in the leather mix with coloring agents to develop unsightly spots. Light tans, creams and grays are unusually bright and clear in final value when Titanox-B is employed in the tinting base.

It will pay you to investigate the economy and ready adaptability Titanox-B.

Give your leather
finishes a jewel-like
brilliance

© You and your customers both will be pleased when you see the jewel-like beauty of leather finishes made with Titanox. (Notice how). Eight pastel shades, delicate tints of brown, blue and red... whatever your requirements, Titanox will help you get there, even shades in finishes of any color for any purpose. Titanox finishes have scored a hit with buyers of leather finishes because they are absolutely chemically stable and long. They will not react with other chemicals and cause costly maintenance or disappointing off-colors. You will find that finishes containing Titanox are particularly pasty shades - are free from dullness, mottling or undesirable undertones. This is due to the high light reflection and remarkable brilliancy of this iron-powder opaque white pigment.

Marschall & Pratt, Inc. 300 Lexington Ave., N.Y.C.

• In manufacturing white and tinted rubber stocks, it is generally conceded that Titanox contributes to improved elasticity in the finished stock.

This improved elasticity is due to lower pigmentation which makes possible a nearer approach to pure gum stock. Due to the high tinting strength and low specific gravity of Titanox, a smaller amount of pigment is needed to produce the desired brightness. In some instances, by using Titanox pigment volume has been decreased as much as 12% percent. Lower pigmentation also means worthwhile savings in production costs.

Chemical stability and inertness are other characteristics of Titanox. It is ideal to produce better looking stocks. Titanox won't react with sulfur, zinc oxide or other chemicals employed in curing or vulcanizing. Rubber goods pigmented with Titanox are whiter. They are lighter in color and have greater sales appeal at the end.

Ask us to cooperate with you in adapting Titanox to your manufacturing process. We also have helpful information.

3 Big • Reasons

WHY MANUFACTURERS
PREFER TITANOX FOR TINTING HIRSH

Here are three important reasons why manufacturers of white and tinted rubber have found it advantageous to use Titanox (titanium dioxide):

1. **Efficiency** — By employing Titanox, it is possible to obtain the desired color with less pigment. This is due to the high tinting strength and low specific gravity of Titanox. In some instances, pigment volume has been reduced as much as 17 percent.
2. **Better Durability** — Titanox is 50 percent stronger in tinting power than some other commonly used rubber pigments. Higher tinting strength produces much whiter or brighter colored stocks at no extra cost.
3. **Improved Flexibility** — Although the lower pigmentation and consequently the more approach to pure gum stock, made possible by the use of Titanox, contributes to improved elasticity in the finished product. It is generally conceded, therefore, that stocks tinted with Titanox have improved texture and elasticity.

...You can produce opaque featherweight stock with this modern white pigment

Featherweight stocks with improved opacity, strength, and resistance to staining and foxing can be successfully produced by using Titanox. Titanox has a high refractive index. You can make a thin, strong paper that is more optically white and opaque due to the fact that Titanox is far more light scattering than fillers customarily used in opaque white papers. When used in combination with your fillers, Titanox clearness helps achieve the same opacity with less weight. Titanox is also a good brightening agent for higher brightness stocks. In the paper industry, good brightness does not mean good opacity. Titanox offers a still better opportunity to improve the opacity and whiteness of light weight magazine and book stocks. It will greatly improve the opacity of spring letter papers and is most productive in small quantities per page. The man who will be glad to furnish the light data.

Memorandum for the President of the United States

You can produce opaque featherweight stock with this modern white pigment

Featherweight stocks with improved opacity, greater strength and superior printing surfaces can be successfully produced by using Titanium Dioxide. Titanium Dioxide has a white color. You can make a thin, strong paper that is exceptionally white and opaque due to the fact that Titanium Dioxide is far more light resistant than other pigments used in opaque white papers. When used in combination with your fibers, Titanium Dioxide has a number of important features: (1) fine particle size; (2) exceptional brightness; (3) higher tensile strength; (4) better opacity; (5) good holding value; (6) improved deepness; (7) high resistance to staining. In some cases, manufacturers find that Pure Titanium Dioxide offers a still better opportunity to improve the opacity and whiteness of light weight magazine and book stocks. We'll gladly cooperate with you in adapting Titanium Dioxide to your products. Consult one of our representatives who will be glad to furnish the technical data.

TITANOX PIGMENTS DEFINITELY IMPROVE

the quality of
coated and printing
stocks

① Paper users are constantly demanding greater opacity, lighter weight, improved color and better printing qualities in white and tinted stocks of all types.

Some manufacturers find it difficult to meet these demands. Others find it very simple... simple, because all of these requirements are easily met by the use of Titanox pigments.

Time and again Titanox pigments have definitely proved their value in raising the quality of both coated and machine finished stocks. In many plants Titanox pigments have been adopted as standard for use in book, magazine, flower, catalog, wrapping, envelope and weaving papers.

Added to coating or better finish, Titanox increases whiteness and opacity and eliminates show-through. Titanox has a number of impressive advantages that make it superior to any other material for improving the

quality of paper at exceptionally low cost.

These advantages are: 1. Fine particle size; 2. Low priced bright white; 3. Highest opacity; 4. Uniform color; 5. Easy dispersion.

As further qualities, Titanox pigments are easily held in suspension, their retention is high even in light weight stocks, they impart no paper strength because of the small amount necessary to produce desired results.

The manufacturer of Titanox pigments is the best to develop the numerous products for use in the paper industry. Our research men have the

advantage of long association with many a paper manufacturer. They will be glad to work with you in solving your specific problems. Send for more detailed information which will be gladly furnished.
