The industrial hygiene studies have demonstrated substantial exposures to asbestos fibers in air during certain vehicle brake relining and inspections. The permissible exposure occurred when brakes and brake drums were cleaned using compressed air blow-off in order to provide adequate protection, the following procedures are recommended:

1. Vehicle brakes and brake drums shall be cleaned using an industrial type vacuum cleaner with a filtering system efficient for fine particle size. Under no circumstances shall compressed air blow-off be used to clean brakes and brake drums.

2. Disposal of waste brake dust from the vacuum of dust suppression shall be done by wet methods. The employee performing the operation shall use a respirator approved by the U.S. Bureau of Mines
