Mr. N. W. Touchette
1700 So. 2nd Street

Norm,

During John Orem's last visit to Monsanto Canada, Oakville, the subject of Santicizer 401 was discussed and samples were requested for evaluation as a possible competitor to Paraplex G-54, which they use in an automotive headliner, principally because of G-54's low rubber migration properties.

What I'd like to do, Norm, is prepare a one-gallon sample of Santicizer 401 consisting of 97 parts of 415 and 3 parts of DIDA.

Oakville realizes that this is not necessarily the ultimate product that we will be evaluating and marketing under the Santicizer 401 label, but they're so insistent on receiving a sample that we've decided to go ahead and send them one now.

Might I please hear from you when the sample will be ready to ship.

Thanks, Norm.
