DESCRIPTION OF WORK IN PROGRESS

PENGAD-Bayonne,N.J.

PLAINTIFF'S EXHIBIT BEA-45

MR. H.B. Lose, Gen'l Supt. of Constr.

DEAR SIR—

Bricklayers: Continued battery #7 oven brickwork: 18% complete through tier #44; 18% through tier #53; 26% through tier #61; 16% through tier #66; 12% through tier #70; 10% through tier #72. Tier #39 is floor; tier #73 is roof. Continued glazed tile brickwork at exhauster and booster building.

Carpenters: Continued sheeting-in battery #7 oven shed and lean-to. Erecting miscellaneous battery #7 brickwork scaffolding. Erecting forms for water strainer pit at water booster pumphouse. Erecting scaffolding for glazed tile at exhauster and booster building. Erecting screeds for finish floor at reversing room. Finesetting ammonia liquor circulating pump.

Ironworkers: Unloading shipment of air and waste heat reversing valves. Continued assembling and placing rail chairs and rail braces for pusher track.. Erecting benzol building steelwork.

Laborers: Excavating trench for sludge drain piping from water strainers. Applying master builder's finish to finish floor of reversing room. Applying bitumastic coating to fuel gas piping to battery. Hauling cooling tower material to erection site. Stocking tiers #45 to #72 battery #7. Stocking glazed tile at exhauster and booster building.

(Cont'd on P. 2)

DESCRIPTION OF WORK IN PROGRESS

MR. H. B. Lose, General Superintendent of Construction

DEAR SIR:-

Bricklayers:
Continued waterproofing expansion cracks in battery #7 oven brickwork.
Washing glazed tile at exhauster and booster building.

Carpenters:
Started dismantling battery #7 oven shed sheeting.
Continued erecting screeds for battery #7 basement finish floor.
Continued erecting protective sheds for heating-up at coke and pusher side benches battery #7.

Ironworkers:
Set west offtake main bridge in place.
Relocating heat shields of door machines.
Started fabricating steelwork for coke side bench alterations.

Boilermakers:
Started erecting ~~xxx~~ handrailing and toe plates for collecting main.

Millwrights:
Continued packing asbestos rope between sole flues and air and waste heat reversing valves battery #7.
Continued ~~xx~~ replacing existing liners and glands of refining pumps in benzol area with new liners and glands.

Painters:
Painting buckstays at east end of battery, battery #7 basement ventilation ducting, #2 pusher machine steelwork, final cooler shell.

Portland Concrete Placed Today---- 13 Cubic Yards.
Portland Concrete Placed To Date--4606½ Cubic Yards.

DESCRIPTION OF WORK IN PROGRESS

MR. H. B. Lose, General Superintendent of Construction

DEAR SIR:-

Laborers:
Completed placing concrete for battery #7 basement finish floor; completed applying master builders finish to same.
Helping masons point-up battery #7 oven brickwork for heating-up.
Helping carpenters remove battery #7 oven shed sheeting.
Grading to yard level area around new recirculating water pumphouse.
Dismantling brickwork scaffolding at exhauster and booster building.

Pipefitters:
Installing larger fuel gas nozzles in battery #7 heating-up piping.
Continued fabricating ovens live steam piping for battery #7 top.
Continued installing benzol area instrument piping, soda circulating piping.
Continued installing #2 pusher machine hydraulics piping.
Continued installing tar drain piping at new primary cooler.
Dismantling temporary air and steam piping at battery #7.

Electricians:
Dismantling temporary wiring at battery #7 oven shed.
Continued welding ladder rungs to pipe supports to provide access to yard floodlights.
Installing power wiring for yard floodlights.
Continued installing power wiring for water booster pump.
Continued installing power and lighting conduit for sulphate handling system.

DESCRIPTION OF WORK IN PROGRESS

MR. C. W. Dillman, General Superintendent of Construction
DEAR SIR—

Bricklayers:
Continued oven top paving battery #7—now 95% complete.
Completed placing ovens by-pass plugs battery #7.
Started placing oven brick above door jambs left out for heating-up period.

Carpenters:
Continued erecting forms for concrete cove base second floor booster and exhauster building.
Continued installing pusher track removable bumpers.
Dismantling roof slab forms at benzol building.

Ironworkers:
Erecting handrailing for offtake mains bridges walks.
Completed installing apron plates beneath door sills battery #7.
Helping remove temporary heating-up hearths from ovens battery #7.
Continued erecting handrail at benzol building roof slab.

Boilermakers:
Continued riveting new manheads to shell of second of four existing benzol washers to be altered.

Millwrights:
Continued miscellaneous adjustments to oven machinery operating mechanism.

Painters:
Painting collecting main, ascension pipes heat shields, door machines, and ceiling concrete of new recirculating water pumphouse.

Note: Average horizontal flue temperature battery #7 is now 1857°F.

DESCRIPTION OF WORK IN PROGRESS

MR. C. W. Dillman, General Superintendent of Construction

DEAR SIR--

Bricklayers:
Continued oven top paving battery #7.
Continued placing oven brick above door jambs left out for heating-up period. Caulking asbestos rope between glazed tile regenerator faces and ovens brickwork battery #7.

Carpenters:
Continued repairing benzol area fence damaged during construction activities in benzol area. Blocking Northwest Crane on flatcar.
Completed erecting screeds for finish floor of new recirculating water pumphouse. Erecting screeds for finish slab of water basin of new three-cell cooling tower.

Ironworkers:
Placing reinforcing mesh for finish slab of water basin of new three-cell cooling tower.
Placing Northwest Truck Crane #82 on flat car for shipment.
Welding upper face plates and seal plates to oven steelwork.

Boilermakers:
Continued welding butt strap joints of collecting main.
Continued caulking asbestos rope between joints of air and waste heat reversing valves.
Cleaning second of four existing benzol washers preparatory to installation of spiral packing in same.

Millwrights:
Caulking asbestos rope between joints of air and waste heat reversing valves. Greasing oven door latches.

MR. C. W. Dillman, General Superintendent of Construction

DEAR SIR—

Note:
Will charge coal into new battery #7 tomorrow, Saturday, March 31, at 9:00 A.M. Average horizontal flue temperature battery #7 is now 1825°F., being raised to 2100°F. for charging of battery.

Bricklayers:
Continued oven top paving battery #7.
Continued caulking asbestos rope between glazed tile faces and regenerator walls battery #7.

Carpenters:
Continued bracing Northwest Crane #82 on flatcar for shipment.
Continued erecting screeds for finish slab of water basin of new three-cell cooling tower.

Ironworkers:
Welding top face plates and cover plates to oven steelwork battery #7.
Adjusting measuring sleeves of larry car.
Welding coke side alley floor steelwork and platform steelwork for peephole castings pusher side of battery.
Erecting handrailing for collecting main walks battery #7.

Boilermakers:
Idle—Weather.

Millwrights:
Greasing oven doors. Adjusting oven machinery.

Painters:
Idle—Weather.

Note: Mr.A.O.Smith, Engrg.Dept., visited contract Today.

B. J. Berhalter, ERECTING ENGINEER

SUB-CONTRACTORS

NAME OF FIRM OR COMPANY	NO. OF MEN	DESCRIPTION OF WORK IN PROGRESS
Dilip Carey Manufacturing Company	9	Insulating service water piping at ovens.
Koppers' Metal Products Division	1	Service Engineer for Koppers Alex Detarrer.

Air. Ind Concrete Placed Today——— 55 Cubic Yards.
Portland Concrete Placed To Date———4916 Cubic Yards.

DESCRIPTION OF WORK IN PROGRESS

MR. C. W. Dillman, General Superintendent of Construction:

DEAR SIR:-

Bricklayers:
Laying up brickwork Benzol Building. (Around Structures, etc.)

Carpenters:
Building miscellaneous scaffolds for Pipefitters, Cement Finishers, and Bricklayers.

Boilermakers:
Erecting scaffold at Benzol Washer.

Millwrights:
Setting Pneumatic Sulphate equipment.

Painters:
Painting Battery #7 basement foundation.
Painting alley-way steel.
Painting Recirculating Water piping.

Laborers:
Tending Masons and Carpenters.
Cleaning debris from Benzol, By-Products and Battery #7 areas.
Brush and finish concrete at 3-Cell Water Cooling Tower.

Pipefitters:
Making tie-in connections from Blast Furnace gas main to Oven Gas reversing valves.
Replaced Existing Ammonia Liquor piping.
Fabricate and install Tar Over-flow and Vent piping at Final Cooler.
Install Recirculating Water piping.

B. J. Berhalter, ERECTING ENGINEER
