(14)

January 28, 1963

Mr. L. A. Pechstein, Assistant Secretary
The Philip Carey Manufacturing Company
Lockland, Cincinnati 15, Ohio

Dear Mr. Pechstein: Occupational Health Program

On December 17, 18 and 19, 1962, Mr. Lee B. Fosdick, Industrial Hygiene Engineer, made a survey of the dust-producing operations in your plant.

This was in accordance with your authorization, following our recommendation that such an engineering survey be made.

Prior to making the survey, Mr. Fosdick conferred at length with Dr. Thomas F. Mancuso, Research Consultant for your company, and subsequent to the survey, Mr. Fosdick has discussed with us his conclusions, findings and recommendations.

A bound report, digesting his findings and setting forth his recommendations, is herewith submitted.

It will be discussed with you and your associates by Dr. Thomas F. Mancuso at the time of his next visit.

Yours very truly,

JOHN T. CANTLON & ASSOCIATES, INC.

John T. Cantlon

John T. Cantlon, President

JTC/kb

P.S. to Mr. Pechstein:

Five additional copies of the report are enclosed for your distribution. Dr. Mancuso plans to visit you early next week.

April 5, 1963

Mr. L. A. Pechstein, Assistant Secretary
The Philip Carey Manufacturing Company
Lockland, Cincinnati 15, Ohio

Dear Mr. Pechstein: Occupational Health Program

You will be interested in the reprints of the report of a study by Dr. Thomas F. Mancuso that was published in February 1963, and will therefore become a part of the medical and occupational health literature. This was based on studies and research done a long time ago and prepared for publication some months ago. It was part of the knowledge and information that Dr. Mancuso and I had when we discussed with you the necessity for an occupational health program in your operations.

The impairment of health that is involved began to show up in Workmen's Compensation claims in your operations four or five years ago, and at that time it was feared this would grow progressively more serious and costly and eventually would be a matter that your management would need to solve.

Also enclosed are copies of an article that appeared recently in an industrial health magazine, which is typical of and indicative of the publications that refer to the basic material of your products. There is danger, therefore, that a condition either exists, or the fear of such a condition will exist, that will affect not only your own employes, but the employes of companies which purchase your products for use, or even of customers of your end products.

You have, of course, foreseen the problem and have retained as your Consulting Medical Director, Dr. Mancuso, who is the person best qualified to assist you in investigating the matter and to advise and guide you in solving it. Dr. Mancuso and I will again discuss these matters further at the time of our next visit.

Yours very truly,

JOHN T. CANTLON & ASSOCIATES, INC.

John T. Cantlon, President
