

MEMORANDUM

TO: W. A. Wright
FROM: B. R. Henry
SUBJ: ASBESTOS REPLACEMENT PROGRAM
DATE: June 28, 1983

As I mentioned to you on Monday, we have reached a stalemate on our program to survey warehouse inventories of asbestos containing materials and to recommend replacement materials for purchases in the future.

Since we have been working with the Industrial Hygiene Department it has been clear that Doctor Irby desires to issue a joint report from I. H. and C.E. To date we have issued reports on the Alloys Plant, McCook Plant and Plant #44.

We are prepared to issue reports on Grand Rapids, Alabama Reclamation, Metallurgical Research, Reduction Research, Listerhill Reduction and River Road, but have not done so because Industrial Hygiene is not ready. Further, Ron Benton did both surveys at Baton Rouge, and we could be prepared to issue that report fairly soon. We feel that until such time as we can issue our backlog reports, we should not visit any more plants.

We request that you reach an agreement with Doctor Irby for separate reports to be issued. The Industrial Hygiene reports can reference our reports if they desire.

B. R. Henry
