

January 8, 1933

Gerard Swope, President
General Electric Company
570 Lexington Avenue
New York, N. Y.

Dear Mr. Swope:-

I have been talking over with Philip Drinker the problem of asbestos dust in the four plants of the General Electric Company that you mention. In view of the fact that I am to attend a conference of physicians called by Dr. Vosburgh, in Schenectady, on the 25th and 26th of this month, at which Dr. Gardner of Saranac, one of the foremost experts on dust diseases, is to be present, I should like to postpone what I have to say on the matter until after discussion with the General Electric physicians and Dr. Gardner. I will therefore write you again about the end of this month.

Sincerely yours,

Alice Hamilton M. D.
