INTERNATIONAL HARVESTER

February 20, 1979

Mr. Thomas E. Levenhagen
Area Director

OSHA Citation # T6076 10

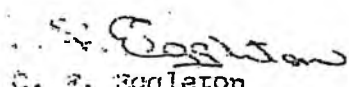

The International Harvester Company, located at 3600 Sullivant Avenue, Columbus, Ohio, pursuant to the above-referenced citation, has had its premises monitored in accordance with 29 CFR 1910.1001 (F)(1), pertaining to Asbestos Exposure. The results of the monitor, conducted by outside consultants, established levels far below the OSHA threshold limit value (TLV) for asbestos fibers. The time weighted averages further revealed that specific medical exams are not necessary. As stated in an earlier response, modifications for housekeeping have been undertaken to prevent dust in bins from being dispersed into the air.

More specifically:

- 1(a) 29 CFR 1910.1001 (F)(1):
This area was monitored relative to the identified part numbers and found to be non-detectable. (Zero fibers found in 100 fields).
- 1(b) 29 CFR 1910.1001 (F)(1):
This area was monitored as above. The TWA exposure was determined to be 0.05 against a OSHA TLV standard of 2.0. Additional general air samples were taken and found to be non-detectable.

Having complied with all issues set forth in this citation, it is respectfully requested that International Harvester be considered in compliance with all points in this citation.

Respectfully,

C. F. Eggleston
