Wilmington, DE 19898

Dear Dr. Snee:

I have recently read "Evaluation of studies of the relationship between blood lead and air lead" in Int Arch Occup Environ Health(1981)48: 219-242, and found it to be a most informative work. We are entering the data analysis phase of an EPA-funded study, began in 1977, entitled -- a longitudinal evaluation of lead body burden in growing children (A.H. Lubin, principal investigator). Women were enrolled in the study during their second trimester of pregnancy and their infants were subsequently followed to their third birthday. Biochemical, environmental and dietary information was obtained. We hope to publish preliminary findings in 1982.

We would be interested in obtaining the report mentioned in the above evaluation which contains the detailed data and additional information on the studies which were discussed. In addition, we would appreciate receiving reprints of your two works which have been submitted for publication. We are also pursuing obtaining some of the other references cited and wondered if you might know how we could obtain the report by Goldsmith.

We look forward to hearing from you.

Yours sincerely,

*Janet S. Kasler*
