amosite be the same as you have already testified to?

A Subject to market availability conditions, yes.

BY MS. TOSTANOSKI:

Q Now, could you describe the process by which the pipecovering block was made?

Well, first, insofar as the block material that was made there, did that process differ from the process that you had observed at Berlin?

A Yes. It involved an intermediate step which took the slurry, the liquid slurry which had been cast and panned and put it through a medium temperature steam atmosphere to give it a hardening effect, after which reaction the product in the mold pans was put into the ware cars and subsequently processed.

Essentially the same as that at the Berlin plant.

Q Did the Sayreville plant have the same dust control equipment and availability of respirators as you have described with respect to the Berlin plant?

A The Sayreville plant, because it was newer
