Subject: ASBESTOS MONITORING/ARCO SAG RIVER

From/Location: David Sucharski

To/Location: Master/ARCO SAG RIVER

Attached please find four (4) copies of my memo describing the results of the asbestos monitoring recently done aboard ARCO SAG RIVER. Please post these memos on the ship's bulletin boards and ensure that they are brought to the crew's attention.

Subject: ASBESTOS MONITORING RESULTS/ARCO SAG RIVER

From/Location: David Sucharski

To/Location: Master/ARCO SAG RIVER

Air samples were taken aboard ARCO SAG RIVER in the accommodations and engine room on 26 February 1988 to determine if dangerous exposures to asbestos were present. The results of tests on these samples show that there were no hazardous concentrations of asbestos fibers present in the air.

Because the ARCO SAG RIVER has asbestos containing material, mainly bulkhead and ceiling panels and floor insulation, we shall monitor the ship in the future to ensure a safe environment.

Anyone who has questions regarding this issue may contact the ARCO Transportation Company Industrial Hygienist, Pamela Persaud at 213-590-4465 or me at 213-590-4527.
