INTER-OFFICE
CORRESPONDENCE

May 11, 1937

Dr. Robert A. Kehoe

My dear Bob:

The enclosed advertisement reminds me of the fact that during the last couple of years at least two synthetic products of rubber-like characteristics have been developed which are much more resistant to gasoline and oil than ordinary rubber. These are "Neoprene", the synthetic rubber developed by the duPont Company and "Thiokol".

It occurs to me that it might be well to investigate these substances for use in rubber protective equipment in connection with the handling of tetraethyl lead. Conceivably, they might be far superior to ordinary rubber.

Very truly yours,

Graham Edgar.

GE/LRJ

RE 0022434

...IT WILL PAY TO PUT THEM ON

Now you can order work gloves that are completely resistant to grease, oils and acids!

These new gloves made by Pioneer Rubber Company wear longer...provide a better grip...are cooler in summer and warmer in winter. They have cut glove replacement costs in every instance where they have been used.

The Pioneer glove was developed through the use of a new form of syn-

thetic rubber—the completely oil-resisting synthetic rubber sold under the trade-mark "Thiokol"*, available as a coating material, as a molding powder, and as a crude.

Manufacturers have found that their customers appreciate the *extra* quality of products made with "Thiokol" rubber. Investigate the possibilities of making your products oil-proof. Write for information to Thiokol Corp. Yardville, N. J.

"THIOKOL"

*Registered U. S. Pat. Off.

Battery and Creamery Rubber Goods
(Bottle Filler Valve Rubbers, Milling Machine Tapping,
Vacuum Hoses, Inulations, Lid Gaskets, Separator Bowl Rings, etc.)

Briefly: Our "excuse" for being in business is because we specialize on just a few certain things and make a higher grade article, as a rule, than sold by others in that field. We cater to people who really desire better than the average mere merchandise and will wait a few days, if necessary, to obtain it.
Factories and Direct Factory Branches at strategic points, with unusually large made-up stocks of even the odd items, make the service absolutely dependable and with prices all about the same these days, why not the better materials that you know will please?
A trial order will convince you, and help both of us to make more money this year.

These hose nozzles are made in three sizes, 1 1/2, 2 and 2 1/2 inches. They are made of brass or iron, and are fitted with a trigger gun and a handle.

These hose reels are made in three sizes, 1 1/2, 2 and 2 1/2 inches. They are made of brass or iron, and are fitted with a trigger gun and a handle.
