Mr. Karl V. Lindell
Canadian Johns-Manville Asbestos Limited
P. O. Box 1500
Asbestos, Quebec, Canada

Dear Mr. Lindell:

Our association is and has for some time been greatly concerned with the adverse publicity being given asbestos - a very important raw material used in the manufacture of our respective products.

This unfair and erroneous publicity is not peculiar to the United States as evident by the enclosed which appeared in Insulation magazine in Great Britain and which was sponsored by The Asbestos Information Committee. We realize that this organization must stem from the building materials manufacturers but it very easily could represent the entire asbestos using industry.

It occurs to us that our asbestos suppliers, ie, the QAMA could promulgate a similar statement which could be publicized by both the QAMA and the user in order to combat the so called "sensational" publicity.

We ask the Asbestos & Health Committee of the QAMA if the Association has any plans to give assistance to the asbestos consuming industry with this serious problem.

Your comments will be appreciated.

Sincerely yours,

A. E. Binger
Executive Secretary
