

C O P Y

August 11, 1941

Mr. M. J. Wiegand,
Monsanto Chemical Company,
St. Louis, Missouri.

Dear Mr. Wiegand:

When I was in St. Louis last you and your associates agreed to a maximum water content of 35 ppm. for the Pyranols. I have before me test data covering the last few shipments of 1476 Pyranol shipped from the Anniston Works. The water content of these shipments is as follows:

Tank car 803	Received June 24, 1941	-----	63 ppm.
107 drums	Received July 8, 1941	-----	31 ppm.
107 drums	Received July 3, 1941	-----	46 ppm.
Tank Car 803	Received July 9, 1941	-----	52 ppm.
107 drums	Received June 23, 1941	-----	31 ppm.
Tank car 803	Received August 2, 1941	-----	71 ppm.

We are calling this to your attention, since the contact with the Monsanto Chemical Company on the subject of water content has been with your Laboratory. I assume that you will call this situation to the attention of the Anniston Plant.

Yours very truly,

F. M. Clark

CC R. S. Weatherly
W. H. Sanborn
