

PIGMENT DISPERSION DATA

GLD005018

THE GLIDDEN COMPANY

(October 13, 1967)

FROM Mr. J. G. Kingston
 Mr. M. W. Malaga DATE July 3, 1967 FOR

CITY Cleveland

ANSWERING LETTER OF

SUBJECT PIGMENT DISPERSION DATA

Information on the dispersion properties of coded pigments has been compiled in the following tables. Data was gathered by contacting each supplier and asking for his experience with his materials. In addition, Glidden's past history on pilot plant and plant batches as obtained by Mr. M. W. Malaga with these pigments is shown. In most cases there is good correlation between supplier rating and Glidden results. In a few cases there are some discrepancies. There still are many blank areas where suppliers have not sent in any information or in a number of cases, did not have any data. These will be supplemented at later dates. Data from Mr. M. W. Malaga's work has been compiled over a period of time on runs made on various pigments. If there is no number in front of the material name the product has not been coded.

Numerical values indicate Hegman (H) grind readings which can be obtained on a Cowles Disperser. Abbreviations can be identified as follows:

C - Cowles (usually refer to solvent systems)
 CS - Specifically solvent systems on Cowles
 CW - Water based dispersions on Cowles
 S - Sand Mill
 NC - Not recommended for Cowles
 NS - Not recommended for Sand Mill
