DAYTON, OHIO

March 27, 1942

Robert A. Kehoe, M. D.
University of Cincinnati
College of Medicine
Edem Ave.
Cincinnati, Ohio

Dear Dr. Kehoe:

I received a copy of your letter to Dr. Beer of Columbus, on March 26, 42. The tissue in question belonged to a patient on whom we performed an autopsy, several months ago. The patient had been suffering from an undiagnosed anemia. Most of his life he had been working as a painter. X-ray examinations of his bones, 2 yrs. prior to his death failed to show lead deposits.

An examination for lead content is desired.

Very truly yours,

E. J. Eichwald
