Subject BENZENE BULLETIN

I certainly support the idea of your proposed Benzene Bulletin. In general, the first "issue" is good. I have some editorial comments below.

1. I recommend the second answer be changed as follows: 1st line - Breathing high concentrations of benzene affects the central nervous system. Last line - Exposure to benzene concentrations in the range of 250-500 ppm has been ...
2. I recommend the third answer be changed as follows: 1st line - Chronic effects of benzene exposure generally result from benzene levels below those that might produce acute, or easily noticeable effects. 2nd line - the word aplastic should be placed in front of anemia.

Please call if you have questions on any of the above.
