WARRANTY AND LIABILITY DISCLAIMER

"Nothing contained herein is to be construed as a recommendation to use or sell any product in conflict with any patent. MONSANTO MAKES NO REPRESENTATION OR WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, AS TO MERCHANTABILITY, FITNESS FOR PARTICULAR PURPOSE, OR OTHERWISE WITH RESPECT TO THE PRODUCTS REFERRED TO. Monsanto makes no guarantee of satisfactory results from reliance upon information, statements or recommendations contained herein and disclaims all liability for any resulting loss or damage."

0684139

THIS catalog lists many of the more than 1000 products produced by Monsanto's operating companies and major subsidiaries. It also lists marketing offices which can provide information on these products.

If you would like additional information regarding products, services or which location can best serve your needs, contact a Customer Inquiry Representative at any of the marketing offices listed on page 72. Or call the Customer Inquiry Center in St. Louis, Missouri (314) 694-3404.

0684140

MONSANTO COMPANY is a diversified producer of chemicals, plastics, agricultural products, man-made fibers, and specialized electronic and process control systems. The company has investments, either directly or through affiliated companies, in 167 manufacturing plants and 35 laboratories or technical centers in 22 nations.

MONSANTO AGRICULTURAL PRODUCTS CO.

This operating unit of the company produces herbicides, a plant growth regulator, parathions, fertilizer, blasting agents, and hybrid swine for the agricultural market. All of the company's herbicides break down rapidly in the soil and are used in major crop producing areas around the world.

MONSANTO CHEMICAL INTERMEDIATES CO.

This operating unit of Monsanto covers four basic business areas: petrochemicals, process chemicals, textile intermediates and oil and gas production and exploration. Major products include styrene, acrylonitrile, phenol, chlorobenzenes, dibasic acids, chloralkali, phosphorus intermediates and industrial acids. These chemicals are used as key raw materials in the manufacture of plastics, fibers, synthetic rubber, agricultural chemicals and thousands of other consumer and industrial products. Through its production and exploration activities, the company finds and develops crude oil and natural gas reserves. While the majority of its operations are in the United States, the group also is actively involved in exploration efforts in Canada, the United Kingdom North Sea, and other parts of the world. The company also maintains an extensive research and development program directed at increasing its eminent position in manufacturing technology. As a result of its successful R & D program, the company's technology is licensed around the world.

MONSANTO COMMERCIAL PRODUCTS CO.

This operating unit consists of three business areas: electronics, process technology and systems for pollution control, and control valves and systems. Electronic products include semiconductor materials, light-emitting diodes and instruments. Through its Fisher Controls Company, the operating unit

markets automatic control equipment and valves. Monsanto Enviro-Chem Systems, Inc., a subsidiary, develops, markets and installs systems to control air pollution. Enviro-Chem also is a world leader in the design and construction of sulfuric acid plants.

MONSANTO INDUSTRIAL CHEMICALS CO.

This operating unit serves a broad range of markets through four business areas: detergents and phosphates, plasticizers, rubber chemicals, and specialty chemicals. Detergents and phosphates include products used in food and dentifrices, while plasticizers add flexibility and other desirable properties for packaging, film and sheeting. Through its rubber chemicals business the company is one of the world's leading suppliers of chemicals used in the manufacture of rubber products. Specialty chemicals include pharmaceuticals, food ingredients, functional fluids, water treatment chemicals and food additives.

MONSANTO PLASTICS & RESINS CO.

This operating unit is composed of three divisions—plastics, resin products and fabricated products. Monsanto plastics include Lustran® ABS, Lustran® SAN and Lustrex® polystyrene, three styrene-based plastics used in a variety of household, construction and appliance applications. Vydene® nylon and Vydene® R mineral-reinforced nylon are used in the electrical, appliance and transportation industries. Resin products encompass Salflex® polyvinyl butyral film, the plastic interlayer used in automotive windshields and laminated architectural glass, and specialty resins for paints, coatings, adhesives and paper. Included in fabricated products are custom designed and stock polyolefin containers, Fome-Cor® sheathing board for manufactured homes and automobile headliners, polyethylene film and Astroturf® stadium and resilient surfaces.

0684141

MONSANTO TEXTILES COMPANY

Nylon, Acrilan® acrylic, modacrylic and polyester fibers are manufactured by this operating unit. These man-made fibers serve apparel, hosiery, home furnishings, carpet, and tire markets. Increasing quantities of Monsanto fibers are sold to the apparel and home furnishings markets under the *Wear-Dated®* warranty. *Acrilan®* acrylic, a recognized leader in the field of carpet fibers, and *Ultron®* nylon, with antistatic and soil-hiding properties, are preferred by quality mills. In many fabric constructions, *SEF®* modacrylic fiber meets the rigid flammability standard for children's sleepwear. *Cerex®* spunbonded nylon fabric is used as a durable scrim for carpeting and in quilted fabric liners, air and liquid filters, and disposable hospital garments. *Bidim®* spunbonded polyester fabric, a civil engineering material, is used extensively for soil stabilization and drainage for road building, rail track beds, heavy work sites and soil drainage.

INTERNATIONAL DIVISION

Monsanto's International operations serve world markets through sales offices and sales representatives in 74 nations. Monsanto International also coordinates operations outside the United States in conjunction with the six operating companies, which have worldwide responsibility for their individual product lines.

MONSANTO RESEARCH CORPORATION

Monsanto Research Corporation is a wholly owned subsidiary engaged principally in government contract work. It operates Mound Laboratory, in Miamisburg, Ohio, for the U.S. Energy Research and Development Administration (formerly the U.S. Atomic Energy Commission). It also maintains a contract research laboratory in Dayton, Ohio, where scientific research is conducted for many government agencies.

The products manufactured and sold by Monsanto's operating companies, its International Division and its major subsidiaries are listed on the following pages. In order to help you locate products, the catalog is divided into the following sections.

COMPANY ORGANIZATION (See page 1)

A brief resume of Monsanto's organization, describing the broad areas of company interests and the specific interests of the operating companies, International Division and subsidiaries.

ALPHABETIC PRODUCT INDEX (See page 4)

Includes products and their uses, refers to the page where specific product descriptions may be found, and to the Locator Key which tells where you may place an order or obtain additional product information.

PRODUCT USE INDEX (See page 12)

Specific uses to which Monsanto products may be put; for example, as Agricultural and Farm Products or as Paint/Coating Ingredients. This index also refers to the Locator Key and to the page where the product description may be found.

LOCATOR KEY (See page 68)

Shown at the lower right of each product description. It works like this: If you need additional information on acetylsalicylic acid

(aspirin), Locator Key 44a refers to the marketing offices that handle this product. Thus, if you are located in Milwaukee, Wisconsin, our Chicago office would be closer to you.

MAJOR OFFICES (See page 72)

Major offices of the company, both in the United States and abroad. This includes the location, address and telephone number of corporate organizations, operating companies, the International Division and subsidiaries. Marketing offices outside the United States, multicompany marketing offices, and those maintained by operating companies are also listed.

TRADEMARKS

The word *Monsanto* and the *Monsanto Block M* are Monsanto's most important trademarks. They are registered in the U.S. Patent Office and in most countries throughout the world. Indexes used in this catalog also contain other trademarks owned by Monsanto and its subsidiaries. Trademarks which are registered in the U.S. Patent Office are followed by the ®. Unregistered trademarks and those for which registration is pending are followed by an asterisk.

ALPHABETICAL PRODUCT INDEX Continued

	Locator Key	Page No.
Santoquin® ethoxyquin antioxidant	44a	21
Santo-Res® 21, 30 Series paper chemicals	53a	42
Santosite® sodium sulfite anhydrous technical	21a	35
Santosize® paper sizing agent	53a	42
Santosol® 200, 300, 340 dye solvents	44a	34
Santotrac® Lubricants synthetic hydrocarbons	44a	37
Santovac® 5 vacuum diffusion pump fluid, polyphenyl ether	44a	34
Santovar® A Antioxidant	43a	59
Santoweb® D, H treated fibers	43a	60
Santoweb® K treated fiber	43a	61
Santowhite® 54, 54S, MK, Crystals Antioxidants	43a	59
Santowhite® Powder Antioxidant for plastic resins	42a	21
Santowhite® Powder Antioxidant for rubber elastomers	43a	59
Scamper® Outdoor Sweepers	51a	23
Scriptel® 500, 700 Series paper coating and specialty coating resins	53a	42
SEF® modacrylic fibers	61a	28
Sequestering Agents (Dequest®)	44a	67
Sequestant (SQ Phosphate)	41a	47
SEQUESTRANTS	63	
Sheeting, Polyethylene (Ger-Pak®)	51d	27
Sheeting, Polyethylene Protective	51d	27
Shipping Containers for radioisotope materials	71a	56
Silicate Ester Fluids (Coolanol®, OS-45® Type IV, OS-59®)	44a	33
Silicon semiconductor grade	32a	26
Skybond® polyimide resins	53a	51
Skydrol® fire resistant hydraulic fluids	44a	33
Sodium Acid Pyrophosphate (SAPP)	44a	32
Sodium Aluminum Phosphate (Levn-Lite®, Pan-O-Lite®, Stabil-9®)	44a	31, 32
Sodium Benzoate, U.S.P., F.C.C.	44a	32
Sodium Dichloroisocyanurate (ACL® 60)	44a	65
Sodium Dichloroisocyanurate Dihydrate (ACL® 56)	44a	65
Sodium Hexametaphosphate	41a	47
Sodium Metaphosphate, Insoluble	41a	47
Sodium Phosphate, Glassy (Olfos®)	41a	47
Sodium Phosphates	46	
Sodium Sulfite Anhydrous, Technical (Santosite®)	21a	35
Sodium Tripolyphosphate (STP)	41a	47
SOLVENTS	64	
Sopanox® ortho-tolyl biguanide	41a	22
Sorbate, Potassium, F.C.C. (Monitor®)	44a	32
Sorbic Acid and Potassium Sorbate, F.C.C. (Monitor®)	44a	32
Special Materials (Rubber)	60	
Spectran® polyester fiber	61a	28
Spray Cooling Unit (Monsanto®)	43b	62
Spunbonded Nylon Fabrics (Ceres®)	61b	27
Spunbonded Polyester Fabrics (Bidim®)	61b	27
SQ Phosphate sequestant	41a	47
Stabil-9® sodium aluminum phosphate	44a	32
STABLE ISOTOPES	72a	64
Stadium Surface (AstroTurf®)	51e	56
Sterox® AJ, AJ-100, Surfactants	41a	65
Sterox® DF, DJ, ND, NE, NJ, NK, NM Surfactants	41a	66
Stymer® Copolymer Resins	53a	67
Strax, Resin essential oil	44c	31
Styrenated Phenol (Montaclore®)	43a	58
Styrene-Acrylonitrile Resins (Lustran® SAN)	52a	54
Styrene-Allyl Alcohol Resins	53a	55
Styrene-Maleic Anhydride Copolymer Resins (Lyttron®)	53a	54
Styrene Molding and Extrusion Materials (Lustrex®)	52a	54
Styrene Monomer	22a	43
Styrene Plastics/Resins	54	
Sulfasol® R Vulcanizing Agent	43a	61
Sulfite, Sodium (Santosite®)	21a	35

Sulfonamide Resins	53
Sulfonic Acids	40
Sulfur S-34 stable isotope	72a
Sulfur-Containing Compounds	40
Sulfuric Acid and Oleum	21a
Sulfuric Acid Plants process and construction	34a
Sulfuric Contact Catalyst	34a
SURFACE ACTIVE AGENTS, DETERGENTS and BLEACHES	65
Surface Active Agents - Anionic	65
Surface Active Agents - Nonionic	65
Sweepers, Outdoor (Scamper®)	51a
Swine Breeding Stock	11c
SYNTHETIC FABRICS	27

T

Tape, Polyethylene (Ger-Pak®)	51d	27
Tape, Polyethylene (Ger-Pak®)	51d	27
TCC® 3,4,4'-trichlorocarbaniide	41a	22
Tensile Testers (Monsanto® Tensometers)	43b	63
Tensometer, Model T-500 tensile tester (Monsanto®)	43b	63
Tensometer, Model W tensile tester (Monsanto®)	43b	63
Terphenyl, Partially Hydrogenated (HB-40®)	42a	48
Test and Measurement Instruments	36	
Tetrachlorophthalic Anhydride (Tetrathal®)	21a	29
Tetramethylthiuram Disulfide (Thiurad®)	43a	58
Tetramethylthiuram Monosulfide (Mono Thiurad®)	43a	57
Tetrapotassium Pyrophosphate	41a	46
Tetrasodium Pyrophosphate	41a	47
Tetrathal® tetrachlorophthalic anhydride	21a	29
TEXTILE CHEMICALS	66	
Therminol® 44, 55, 60, 66, 88, VP-1 heat transfer fluids	44a	34
Thermometers, Digital (Digitec®)	35a	36
THICKENING AGENTS	67	
4,4'-Thiobis (6-tert-butyl-m-cresol) (Santonox® and Santonox® R)	42a	21
4,4'-Thiobis (6-tert-butyl-m-cresol) (Santowhite® Crystals)	43a	59
Thiocarbaniide (A-1®)	43a	57
Thiofile® MBTS Vulcanization Accelerator	43a	58
Thiotax® MBT Vulcanization Accelerator	43a	58
Thiurad® Vulcanization Accelerator	43a	58
Time Interval Meter, High Resolution, Model 8320	35a	25
Tolu Balsam, Resin essential oil	44c	31
Toluene	22a	45
para-Toluenesulfonamide	42a	39
para-Toluenesulfonyl Chloride	42a	39
Toluenesulfonyl Chloride, Mixed	42a	39
ortho-Tolyl Biguanide (Sopanox®)	41a	22
Tonka, Resin essential oil	44c	31
Track Surface (AstroTurf®)	51e	57
Triallate Herbicide (Avadex® BW, Far-Go®)	12a	20
Triaryl Phosphate (Santicizer® 154)	42a	49
Triaryl Phosphate Modified (Santicizer® 143)	42a	49
Tributyl Phosphate (TBP)	42a	50
Tricalcium Phosphate	44a	46
2,3,3-Trichloroallyl Diisopropylthiocarbamate (Avadex® BW, Far-Go®)	12a	20
3,4,4'-Trichlorocarbaniide (TCC®)	41a	22
Trichloroisocyanuric Acid (ACL® 85)	44a	65
Tridecanoethoxy Oxide Condensate (Sterox® AJ)	41a	65
3,4,5-Trimethoxybenzaldehyde (TMB)	44a	39
Triphenyl Phosphate (TPPA)	42a	50
Tripolyphosphate, Sodium (STP)	41a	47

PRODUCT USE INDEX

ADHESIVES and ADHESIVES COMPONENTS

Adhesives

Phenolic and Resorcinol Resins.....53b 19

Adhesives Components

Butvar[®] Resins.....53a 53
Dicyclohexyl Phthalate (DCHP).....42a 48
Formvar[®] Resins.....53a 53
Gelva[®] Multipolymer Resin Solutions.....53a 52
Gelva[®] Resin Emulsions.....53a 52
Gelva[®] Resin Solutions.....53a 52
Gelvatol[®] Resins.....53a 52
Lytron[®] Latexes.....53a 54
Lytron[®] Resins.....53a 54
Mod-Epoxy[®] epoxy resin modifier.....42a 53
Resloom[®] Melamine Resins.....53a 50
Santicizer[®] 141 plasticizer.....42a 49
Santicizer[®] 160 plasticizer.....42a 49
Santicizer[®] 261 plasticizer.....42a 49
Santicizer[®] 711 plasticizer.....42a 50

AGRICULTURAL and FARM PRODUCTS

Feed Additives

MHA[®] Methionine Hydroxy Analog calcium.....44a 21

Fertilizers

Ammonia, Anhydrous.....11a 19
Ammonium Nitrate 83% Solution.....11a 19
Diammonium Phosphate (DAP).....41a 45
E-2[®] Ammonium Nitrate Fertilizer Pills.....11a 19
Monoammonium Phosphate (MAP).....41a 45
Monopotassium Phosphate.....41a 46

Herbicides

Avadex[®].....12a 19
Avadex[®] BV.....12a 20
Far-Co[®].....12a 20
Lasso[®].....12a 20
Machete[®].....12a 20
Ramrod[®].....12a 20
Ramrod[®]/atrazine.....12a 20
Randex[®].....12a 20
Roundup[®].....12a 20
Vegadex[®].....12a 20

Insecticides

Ethyl Parathion.....12a 20
Methyl Parathion.....12a 20
Niran[®] 6-3.....12a 20

Plant Growth Regulator

Polaris[®].....12b 21

Related Products/Services

Gelvatol[®] Resins.....53a 52
Polyethylene Protective Sheeting and Tape.....51d 27
Swine Breeding Stock.....11c 21

ANIMAL NUTRITION PRODUCTS

Amino Acids

MHA[®] Methionine Hydroxy Analog calcium.....44a 21

Preservatives

Allaban[®] mold inhibitor.....44a 21
Santiquin[®] ethoxyquin.....44a 21

ANTICAKING FLOW CONDITIONERS

Tricalcium Phosphate.....44a 46

ANTIFOAMING AGENTS

Limit[®] 33 defoamer.....53a 42
PC-1244[®] defoamer.....21a 21
PC-1344[®] defoamer.....21a 21

ANTIOXIDANTS

Santonox[®] and Santonox[®] R.....42a 21
Santiquin[®] ethoxyquin.....44a 21
Santowhite[®] Powder antioxidant.....42a 21
Sopanax[®] ortho-tolyl biguanide.....41a 22

BACTERIOSTATS/DISINFECTANTS/ FUNGICIDES/FUNGICIDALS/GERMICIDES

ACL[®] 56, 59, 60, 66, 85 Sanitizer and Bleaching Compounds.....44a 63
2,4-Dichlorophenol.....41a 40
Monsanto[®] Penta pentachlorophenol, technical.....41a 22
Santophen[®] 1 Germicide.....41a 22
Santophen[®] 1 Solution.....41a 22

ADHESIVES and ADHESIVES COMPONENTS

ADHESIVES

PHENOLIC and RESORCINOL RESINS

Supplied as liquids, various grades of phenolic and resorcinol resins are available for bonding applications demanding an extremely high degree of water resistance. Bonds can withstand continuous boiling. The resins are used as glues for plywood, hardboard, particle board bonding and general woodworking. They can be cured by hot and cold press laminating or radio frequency.

FERTILIZERS

AMMONIA, ANHYDROUS

Compressed gases that are stored, transported and handled as clear liquids. Monsanto anhydrous ammonia fertilizer grade contains 0.25-0.50% water; commercial and industrial grade contains 5 ppm maximum oil and only trace amounts of iron and chlorine and 0.25-0.50% water. Refrigeration grade contains only 100 ppm maximum water, 3 ppm maximum oil, and 0.1 ml/gm of nonbasic gas in the vapor above the liquid.

MONSANTO AGRICULTURAL PRODUCTS CO.

HERBICIDES

AVADEX®

A proprietary "diallate" herbicide supplied in liquid and granular form for controlling infestations of wild oat in sugarbeet, flax and certain other crops. Liquid contains 4 lbs./gallon; granules, 10% active 2,3-dichloroallyl diisopropylthiocarbamate. Applied as ground or aerial spray.

MONSANTO AGRICULTURAL PRODUCTS CO.

Locator Key 12a

0684159

19

AVADEX® BW and FAR-GO®

A proprietary "triallate" herbicide supplied in liquid and granular form for control of wild oat infestations in barley, spring wheat, Durum wheat and certain other crops. Liquid contains 4 lbs./gallon; granules, 10% active 2,3,3-trichloroallyl diisopropylthiocarbamate.

MONSANTO AGRICULTURAL PRODUCTS CO.

Locator Key 12a

LAASSO®

A proprietary herbicide available as a 4 lb. per gallon (active ingredient) emulsifiable concentrate and a 15% (active ingredient) granule. The active ingredient is 2-chloro-2', 6'-diethyl-N-(methoxy methyl) acetanilide, common name, "alachlor". Lasso is used for selective weed control in corn, soybeans, peanuts, cotton, and certain other crops.

MONSANTO AGRICULTURAL PRODUCTS CO.

Locator Key 12a

MACHETE®

A proprietary "butachlor" herbicide supplied in liquid and granular form for control of a wide range of weeds in rice and barley. The formulation varies from country to country. Machete is not sold in the United States.

MONSANTO AGRICULTURAL PRODUCTS CO.

Locator Key 12a

RAMROD®

Ramrod herbicide is available as 20% active granule and as 65% active wettable powder. The active ingredient is 2-chloro-N-isopropylacetanilide. Common name, "propachlor". Ramrod is used for selective weed control in corn, grain sorghum (milo) and seed soybeans. The wettable powder is also cleared for use on processed green peas.

MONSANTO AGRICULTURAL PRODUCTS CO.

Locator Key 12a

RAMROD®/atrazine

A preblended herbicide mixture available as wettable powder. The active ingredients are 2-chloro-N-isopropylacetanilide (48.1%) (common name, "propachlor") and 2-chloro-4-ethylamino-6-isopropylamino-s-triazine (20.9%) (common name, "atrazine"). Ramrod/atrazine is used for selective weed control in corn and grain sorghum (milo).

MONSANTO AGRICULTURAL PRODUCTS CO.

Locator Key 12a

RANDOX®

A proprietary "CDA" herbicide supplied in liquid and granular form for controlling infestations of annual grasses in onion and certain other crops. Liquid contains 4 lbs./gallon; granules, 20% active a-chloro-N,N-diallylacetamide.

MONSANTO AGRICULTURAL PRODUCTS CO.

Locator Key 12a

ROUNDUP®

A proprietary herbicide available as a 4 lb. (active) per gallon liquid formulation. Containing 4 lbs./gallon isopropyl-amine salt of glyphosate. Offers effective postemergent control of many emerged annual and perennial broadleaves and grasses.

MONSANTO AGRICULTURAL PRODUCTS CO.

Locator Key 12a

VEGADEX®

A proprietary "CDEC" herbicide supplied in liquid or granular form to control certain annual grasses and broadleaf weeds in a variety of vegetable crops. Liquid contains 4 lbs./gallon; granules, 20% active 2-chloroallyl diethyldithiocarbamate.

MONSANTO AGRICULTURAL PRODUCTS CO.

Locator Key 12a

INSECTICIDES

ETHYL PARATHION

A highly toxic commercial insecticide supplied only to professional formulators for the control of a variety of insects and mites. Ethyl parathion has a residual effect that is an advantage over other organic insecticides making it a standard for certain applications. Poison emblem and antidote required on labels.

MONSANTO AGRICULTURAL PRODUCTS CO.

Locator Key 12a

METHYL PARATHION

A highly toxic commercial insecticide supplied as 80% active solution (in xylene) only to professional formulators for controlling boll weevil and other insects in cotton and a wide spectrum of insects that attack fruit, vegetable and forage crops. Poison emblem and antidote required on labels.

MONSANTO AGRICULTURAL PRODUCTS CO.

Locator Key 12a

NIRAN® 6-3

Supplied only to professional formulators and distributors, Niran 6-3 is a liquid blend of ethyl and methyl parathions containing the equivalent of 6 lbs. ethyl and 3 lbs. methyl parathions per gallon. It is highly toxic and used commercially for the control of bollworms and boll weevils in cotton and certain other regulated uses. Poison emblem and antidote required on labels.

MONSANTO® PENTA *pentachlorophenol*, technical

An industrial biocide and preservative soluble in mineral oils and many commercial solvents. Monsanto Penta is formulated into a variety of products for wood treatment to preserve utility poles, building lumber, fence posts and cellulosic building materials against termites, boring insects, and wood rot.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

SANTOPHEN® 1 GERMICIDE *ortho*-benzyl- parachlorophenol

Santophen 1 is a white solid used as a broad spectrum germicidal active for formulating disinfectant and disinfectant-cleaner products intended for use on inanimate objects. Santophen 1 possesses high bactericidal and fungicidal activity, low odor when formulated, and low toxicity to higher animals.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

SANTOPHEN® 1 SOLUTION 75% Santophen 1, 25% isopropanol

Santophen 1 solution is used as a broad spectrum germicidal active for disinfectant and disinfectant-cleaner products intended for use on inanimate objects.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

TCC® BACTERIOSTATIC AGENT 3,4,4'- *trichlorocarbanilide*

TCC is a bacteriostatic agent that is supplied to the bar soap industry for use in antibacterial medicated soaps and deodorant bars.

E-2® AMMONIUM NITRATE FERTILIZER *industrial* grade

E-2 ammonium nitrate fertilizer is a uniform, pearly white, spherical, hard, dense, free-flowing prill containing no coating or organic matter. In its whole prill form E-2 will not absorb fuel oil and is, therefore, unsuitable for use in Ammonium Nitrate-Fuel Oil (ANFO) mixtures unless ground. It is an inexpensive ingredient for fixed explosives when reduced to small particles by grinding. E-2 has a bulk density of 60 lbs./cu. ft. and contains a nominal 0.5% moisture.

MONSANTO® HX-30 (REGULAR) AMMONIUM NITRATE FERTILIZER *industrial* grade

HX-30 ammonium nitrate fertilizer is a spherical, white prill containing 1.0% to 1.5% kaolin coating, 0.3% moisture and 0.07% organic matter. Its bulk density is 48 lbs./cu. ft. and the prills are treated to resist caking. HX-30 prills exhibit a controlled internal porosity for maximum oil absorbency which, upon mixture with fuel oil or other carbonaceous fuels to make ANFO, produces a blasting agent well suited for use in open pit mining, quarrying and construction.

MONSANTO AGRICULTURAL PRODUCTS CO.

Locator Key 11b

M-PAK® 100, 500, 600, 650 BLASTING AGENTS

M-Pak blasting agents are medium and high energy nitro carbo nitrate (NCN) explosives supplied for use in coal and metal mining. Available in bulk, paper shot-hole bags and poly-lined wet-hole cartridges.

MONSANTO AGRICULTURAL PRODUCTS CO.

ENVIRONMENTAL CONTROL

AMMSOX* SYSTEM

System to remove sulfur oxides from flue gas stream; applicable to utility power generation, industrial boilers, and many other SO₂ emitting sources.

MONSANTO ENVIRO-CHEM SYSTEMS INC.

Locator Key **34a**

Enviro-Chem* equipment, developed by Monsanto Enviro-Chem Systems, Inc., is supplied to the chemical processing and other industries through an engineering sales service that custom-designs, engineers, and constructs a variety of units for special tasks as follows:

BRINK* ASPHALT VENT SYSTEM

Collects condensed hydrocarbon vapors from vent streams from various asphalt handling and storage systems with efficiencies of 99.5% and higher. System is pre-engineered and contains a mist elimination section and air motive section. Capacities range from 100 ACFM up to 1500 ACFM.

MONSANTO ENVIRO-CHEM SYSTEMS INC.

Locator Key **34a**

BRINK* FILTER

Custom-engineered fiber beds in several types of required support materials and configurations for removing very fine solids in low concentrations from liquid or gas streams. Collection efficiencies exceed 99%.

MONSANTO ENVIRO-CHEM SYSTEMS INC.

Locator Key **34a**

BRINK* MIST ELIMINATOR

Custom-engineered fiber beds in several types of required support materials and configurations for removing very fine liquid mists and soluble solids from gas streams at efficiencies up to 99.9+%, depending on design at low initial pressure drop. Recommended for removal and/or collection of liquid mists or soluble solids that may be valuable, toxic, or contaminating.

MONSANTO ENVIRO-CHEM SYSTEMS INC.

Locator Key **34a**

BRINK* OLEUM VENT SYSTEM

Converts sulfur trioxide vapor into sulfuric acid mists which are removed in a high efficiency Brink mist eliminator. System is pre-engineered, contains an optional hydrolysis system, mist elimination section and air motive section. Capacities range from 100 up to 1500 ACFM.

MONSANTO ENVIRO-CHEM SYSTEMS INC.

CER-PAK® POLYETHYLENE SHEETING and TAPE

Supplied as moisture vapor barrier material in gauges .001" to .010", 1' to 40' width, in 60' to 100' length rolls in natural or black. *Cer-Pak* tape supplied in 2" x 100' rolls. Used under concrete slabs, over studding, concealed flashing, for weather-protecting materials, closing in unfinished construction, lining crawl spaces, and covering fresh concrete.

MONSANTO PLASTICS & RESINS CO.

Locator Key 51d

POLYETHYLENE PROTECTIVE SHEETING and TAPE

Supplied in gauges ranging from .001" to .010", 3' to 40' widths, 100' to 4000' rolls of natural or black polyethylene. Tape is supplied in 2" x 100' rolls. Used for strip mulching, greenhouse covers, fumigation covers, row covers, pond liners, and protective tarpaulins.

MONSANTO PLASTICS & RESINS CO.

Locator Key 51d

FABRICS, SYNTHETIC

BIDIM® spunbonded polyester fabrics

Bidim engineering fabrics are made of continuous filament polyester fibers needled to form a highly-permeable fabric. This mechanical interlocking of the polyester fibers makes a formed fabric with the durability and toughness required for a wide variety of end uses now being methodically explored. Initial applications have been primarily in civil engineering, with special emphasis on bed stabilization for access roads built over poor loadbearing soils, bed stabilization for railroads built over poor loadbearing soils, low-maintenance drainage systems, and stabilization and contamination-prevention of asphalt roads, particularly under severe freeze-thaw conditions. They are also used for constructing low maintenance drainage systems, for establishing erosion control along

waterways and shorelines, for earth reinforcement, and in the construction of silt fences.

MONSANTO TEXTILES COMPANY

Locator Key 61b

CEREX® spunbonded nylon fabrics

Cerex spunbonded nylon is an extraordinarily tough and durable nonwoven fabric. In the spunbonded process, nylon fibers are self-bonded (no adhesive used) to give a stable fabric that is 100% nylon 6/6, and therefore, mildew and rot resistant. The fiber bonding is permanent. The dimensional stability, tensile strength, stitch strength and tear resistance are extremely high. The fabric has the high-heat resistance of the nylon polymer. *Cerex* nylon can be used in interlining applications, as a quilting medium, as a reinforcing agent, a substrate for coating thermoplastic resins, a strength-giving web for tissue laminates, and a filtration media. It can be readily bonded to itself or to other materials with standard adhesives, dyed to any shade with nylon dyes or printed with multi-color designs.

FIBERS, MAN-MADE

ACRILAN® acrylic fibers

Available in 2-15 denier in a variety of staple lengths and tow suitable for a full range of woven, knit, and tufted textile and industrial applications. The standard product has excellent whiteness and high resilience, and is available in types designed for the cotton, woolen, and modified-worsted spinning systems. Types especially tailored to excel in certain end uses include: bi-component fibers (for sweaters and carpets), differential dyeing companion fibers (for apparel, carpets and home furnishings), producer-colored fibers (for deep-pile and apparel), and solution-dyed fibers (for awnings and indoor-outdoor carpet).

MONSANTO TEXTILES COMPANY

Locator Key 61a

ACTIONWEAR®, BLUE "C"®, CUMULOFT®, ULTRON® filament nylon yarns

Available in 1-18 denier per filament products in a full range of weaving, knitting, and tufting multifilament yarns for apparel, carpet, home furnishings, industrial, military, and tire applications, as well as monofilaments for hosiery. Types specially engineered for high performance in certain end uses include: Actionwear stretch nylon hosiery yarns, and Ultron static-resist, soil-hiding, advanced-generation carpet yarns. Cumuloft first-generation bulked, continuous filament nylon for carpets and Blue "C" nylon for home furnishings and many other textile uses have long been standards in the industry.

MONSANTO TEXTILES COMPANY

Locator Key 61a

BLUE "C"® and SPECTRAN® polyester fibers

Available in 1.5-6 denier fiber in staple lengths suitable for a wide variety of apparel, home furnishings, and industrial applications. The standard Blue "C" product has excellent whiteness and is crimped for high resilience in woven, knit, and fiber filled products. Spectran is engineered to provide the excellent performance properties of regular polyester with superior dyeing properties and exceptional hand, drape, stain and soil release performance.

MONSANTO TEXTILES COMPANY

Locator Key 61a

FINA® acrylic fiber

Available in 1.2 denier, Fina—a Type 16 Acrilan variant—is the finest and brightest acrylic produced in the United States. Developed specifically for use in fine cut knits and lightweight broadwovens, the new fiber facilitates production of fabrics offering unique and exceptional consumer appeal.

MONSANTO TEXTILES COMPANY

Locator Key 61a

NYLON STAPLE

Available in 6, 10, and 18 denier per filament products in several dye levels and lusters for spinning into yarns and tufting into carpets.

MONSANTO TEXTILES COMPANY

Locator Key 61a

POLYESTER FILAMENT YARNS

Available in popular multifilament textile deniers as rigid yarns suitable for texturing, as producer-textured products, and as partially drawn yarns specially tailored for draw texturing. The rigid or textured product is used in warp-knit, circular-knit, or broadwoven equipment, principally for apparel outerwear.

MONSANTO TEXTILES COMPANY

Locator Key 61a

SEF® modacrylic fibers

Available in 3, 5, or 8 denier fiber in popular staple lengths for use in children's sleepwear, draperies, and area rugs. In proper constructions, such items will meet federal and other flammability standards. Also available in 3 denier, uncrimped tow for use in battery separators. This new fiber combines the excellent aesthetic and processing characteristics of acrylics with the flame-retardant qualities of conventional modacrylics to yield an acrylic-like modacrylic of broad utility in apparel and home furnishings applications.

MONSANTO TEXTILES COMPANY

Locator Key 61a

WEAR-DATED® textile products

The Monsanto licensing program for consumer products made from its Acrilan acrylic, nylon, polyester and modacrylic yarns and fibers was launched in 1962. Manufacturers of apparel and home furnishings whose merchandise meets Monsanto quality standards are licensed to use the Wear-Dated tag. This is the consumer's warranty that if the item does not give normal wear for the specified period of time (one year for apparel and certain home furnishings, and two to five years for other home furnishings, depending on the product and its intended use) Monsanto will refund the purchase price or replace the item when returned with the Wear-Dated tag and sales slip. In the case

of Wear-Dated upholstered products, only the sales slip and the filled-out Wear-Dated tag is returned and the upholstery is repaired or replaced after home inspection verified failure to give normal wear within two years from date of purchase.

Textile products submitted for licensing under the Wear-Dated program are tested for fiber content, colorfastness, construction and various other criteria before the license and tags are issued. Merchandise carrying the Wear-Dated warranty can, therefore, be depended upon to offer good value and dependable performance. In the United States more than 300 categories of textile products carry the Wear-Dated warranty. Increasingly international in scope, the program now operates in about 20 countries.

MONSANTO TEXTILES COMPANY

FIRE SAFETY, PRODUCTS TO IMPROVE

NOTE: Materials designated in this Product Catalog as "fire resistant" or "flame retardant" generally are more difficult to ignite, or once ignited burn at a slower rate than corresponding conventional materials. These terms do not mean that fire resistant or flame retardant materials will not burn. However, when properly used, Monsanto's fire resistant or flame retardant products are useful in helping customers meet their fire safety requirements.

ETHAVAN® ethyl vanillin

Ethavan is a rich vanilla-like flavor. It has approximately three times the flavoring power of vanillin. It is commonly used by flavor manufacturers to replace part of the vanillin to give bouquet to the finished flavor. Because of its higher volatilizing point it is ideally suited for baked goods.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 44a

FLAVORINGS

Monsanto Flavor/Essence supplies an extensive line of natural and imitation flavors in both liquid and spray dried form, as well as offering a customized flavor service to meet individual requirements for use in the food, beverage, confectionary, tobacco, liquor, pet food, baking, dairy, dessert and pharmaceutical industries.

MONSANTO FLAVOR ESSENCE INC.

Locator Key 44c

METHYL SALICYLATE, U.S.P.

Synthetic oil of wintergreen. A man-made product of uniform purity, free of the often erratic fluctuations in odor and flavor of the natural product. It is used in food and beverages as a flavoring. In pharmaceuticals as a medicant, and masking agent for disagreeable tasting drugs. Additional uses include, as a flavor in mouth washes, cough syrups, and dentifrices.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 44a

VANILLIN MONSANTO®

Vanillin is a white crystalline powder used as a synthetic vanilla flavoring in flavor extracts, baked goods, confections, soft drinks and ice cream.

FUNCTIONAL FLUIDS

AIRBORNE and SPECIALTY

SKYDROL® fire resistant hydraulic fluids

Skydrol fluids are engineered from a series of fire resistant, highly stable phosphate ester base stocks specially-processed to be clean and particle-free and formulated for a particular type of aircraft service. The operating temperatures, viscosity characteristics, pumpability of each are designed for their recommended service. These include: Skydrol "500B", "500B-4", "LD" and "LD-4" grades for jet aircraft. Skydrol fluids require compatible construction materials in seals, packings, paints, and wiring. They are "designed-in" to the specific aircraft with the collaboration of Monsanto's technical service support. They are distributed worldwide to commercial airlines.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **44a**

DIELECTRIC

COOLANOL® 20, 25, 35, 45 dielectric coolants and heat transfer media

A series of formulated silicate ester fluids used for a wide range of heat transfer, dielectric and hydraulic fluid applications. The four Coolanol fluids span an operating-temperature range of -90°F to 700°F and are used primarily in aerospace and advanced electronic hardware as a coolant/dielectric.

MONSANTO INDUSTRIAL CHEMICALS CO.

PHENOLS

para-CHLOROPHENOL

Organic intermediate used in the manufacture of dyestuffs, primarily hydroquinone and anthraquinone vat dyes. Other potential applications are for the manufacture of specific germicides, cocidiostats and miticides.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

para-CUMYL PHENOL

Organic intermediate for the production of phosphate esters. Other potential applications are as dye carrier, or as other PCP ethoxylates.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

2,4-DICHLOROPHENOL

Organic intermediate used in the manufacture of agricultural chemicals, bacteriostats, fungistats, germicides, and dyestuffs.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

DIDODECYL PHENOL *crude*

A coproduct of the manufacture of dodecylphenol, didodecyl phenol shows promise as a specialty surfactant in oil treating.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

DINONYL PHENOL *crude*

A coproduct of the manufacture of nonylphenol, dinonyl phenol is commonly ethoxylated for use as a specialty chemical in oil treating and agricultural emulsifiers.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

DODECYLPHENOL *alkyl phenol*

Reactive dodecylphenol is specifically designed for use in the manufacture of chemical intermediates. Typical reactions with dodecylphenol are ethoxylation, condensations with aldehydes, etherification, esterification, halogenation, mercuration, nitration, polymerization, and sulfonation.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

para-NITROPHENOL

Supplied in tan to greenish brown flake or granular form, assay 99.0% minimum, molecular weight 139.11. The compound is highly toxic. It is used by chemical manufacturers as an intermediate for making dyestuffs, insecticides, photographic chemicals, leather tanning compounds and pharmaceuticals.

MONSANTO AGRICULTURAL PRODUCTS CO.

Locator Key 13a

NONYLPHENOL *alkyl phenol*

Reactive nonylphenol is specifically designed for use in the manufacture of chemical intermediates. Typical reactions with nonylphenol are ethoxylation, condensations with aldehydes, etherification, esterification, halogenation, mercuration, nitration, polymerization, and sulfonation.

OTHER ORGANIC CHEMICALS

CYANURIC ACID

Cyanuric acid stabilizes chlorine against loss from ultraviolet light degradation. Its primary use is in swimming pools.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **44a**

CYCLOHEXANOL

An intermediate used in making plasticizers; dry cleaning, dyebath and textile finishing formulations; and for the manufacture of cyclohexanone and adipic acid.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key **21a**

ETHYL ACETATE

Monsanto® ethyl acetate is available at ester assays of 99.5%, 95-98%, and 85-88%. All grades are clear, sediment-free and the color does not exceed 5 (APHA). The water content is 0.05% max. and the characteristic odor is nonresidual. The products are suitable for coating resin-solvents, cellophane lacquers, and miscellaneous solvent uses in the paint and plastic industries.

MONSANTO PLASTICS & RESINS CO.

Locator Key **53a**

PROPIONITRILE

Converted into propionic acid and di-n-propylamine. Also finds application as an organic solvent.

MONSANTO CHEMICAL INTERMEDIATES CO.

LIMIT® 33 defoamer

Limit 33 is a specially formulated defoamer for the paper industry to be used at the size press to defoam starch and mixtures of starch and *Scripset*® resins.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

LYTRON® LATICES

See Page 54

MERSIZE® paper sizing agent

Mersize TFL, Mersize ExCL and Mersize RM Dry are forms of chemically fortified rosin-based sizes that are ready to use in a paper mill to reduce sizing costs, improve resistance to ink, water and other aqueous solutions, give better feathering resistance and more uniform dependable sizing.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

MONSIZE® paper sizing agent

A highly efficient wet-end sizing agent supplied as a liquid. It is approximately twice as efficient as paste rosin size which allows maximum sizing with minimum sizing solids in the sheet. *Monsize* sizing agent functions well over a pH range of 4.0 to 6.8.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

RPC-1600 cationic resin

A water solution of a highly cationic nonthermo-setting resin, used as a retention aid.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

SANTO-RES® 21, 30 SERIES paper chemicals

Santo-Res 21 is a cationic retention aid, useful for retaining dispersed rosin sizes, improving drainage and retaining fines. It is also used to impart a high degree of strength to unbleached paper and board when wet, and to extend life of paper products exposed to weather.

Santo-Res 30 is a caustic activatable polymer solution designed to impart high levels of wet strength to paper products made from bleached or reclaimed pulp. It is also effective as a Yankee drier coating aid.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

SANTOSIZE® paper sizing agent

Santosize paste rosin sizes are partially-neutralized rosin sizing agents for specific paper and paper-board grades where the higher efficiency of fortified size is not required. The *Santosize* paste sizes emulsify readily.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

SCRIPSET® 500, 700 SERIES paper coating and specialty coating resins

Scripset resins are supplied in a variety of grades convenient for the papermaker's process and handling. The *Scripset* 500 resins are film-formers

for surface treating paper and paperboard to improve printability, create good surface qualities and impart water resistance. The Scripset 700 series resins are new improved liquid variations of the dry 500 series resins.

PETROCHEMICALS

MONOMERS

ACETIC ACID *glacial and commercial*

Supplied in commercial grades and as glacial acetic, assay minimum 99.8% acetic acid. Shipped with color less than 15 Pt-Co units. Used as a chemical intermediate, in the manufacture of cellulose and vinyl acetate resins and in the textile industry.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

ACRYLONITRILE

A monomer used in the manufacture of acrylic textile fibers, ABS plastics, nitrile rubber, copolymer latices, and as a chemical intermediate.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

BUTADIENE

Supplied, inhibited with tertiary butylcatechol, in liquified gas form with 99.3% minimum assay. A highly reactive hydrocarbon, it is used in the manufacture of styrene, acrylonitrile, and polybutadiene synthetic rubbers and various types of latices used in paints and binders for nonwoven fabrics. It is an intermediate for manufacturing adiponitrile, tetrahydrophthalic anhydride and ABS plastics.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

FORMALDEHYDE

Supplied in grades with a choice of assay: 37%, 44%, 50%, and 52% (methanol-free) and 37% and 44% inhibited with 7% methanol. Used as a preservative, disinfectant and an intermediate in the manufacture of melamine and phenolic resins.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

PHENOL

Supplied as a solid or liquid solution in commercial or U.S.P. grades. A major basic chemical intermediate, phenol is used in the manufacture of phenolic resins for molding and laminating, for lacquers and varnishes; in the manufacture of germicides, antiseptics, preservatives, insecticides, photographic chemicals, dyestuffs; and as a selective solvent in petroleum refining.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

STYRENE MONOMER

An aromatic hydrocarbon with an aliphatic side chain supplied as a colorless liquid inhibited with TBC. Styrene monomer is used to make polystyrene plastics, copolymer resins, SBR synthetic rubber and latices, ion exchange resins, polyesters, and styrene-modified oils and alkyds for surface coatings.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

VINYL ACETATE MONOMER

HQ grade (uninhibited) and DPA grade inhibited with diphenylamine are supplied in liquid form. Vinyl acetate is a reactive monomer used in the manufacture of polyvinyl acetate resins; PVAc latices used in adhesives and surface coatings; and for making copolymer resins for molding and extruding.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

OTHER PETROCHEMICALS

ACETONE

Supplied as a liquid, APHA color 5 maximum and 0.5% moisture maximum. It is used widely as a commercial solvent and as an intermediate in chemical manufacturing.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

ACETOPHENONE

A commercial grade organic intermediate chemical supplied as a liquid assaying typically 40-60% by weight.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

AROMATIC CONCENTRATE C₈ mixed isomers

Supplied as a liquid concentrate containing mixed isomers of trimethylbenzene. It is used for gasoline blending and by chemical manufacturers for making intermediates and as a specialty solvent.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

0684183

BUTENE-2 CONCENTRATE

Supplied in liquid form (under pressure), the concentrate is a colorless olefinic hydrocarbon, predominantly *cis*- and *trans*- butene supplied to chemical manufacturers for use as a butadiene feed stock, a cross-linking agent in the manufacture of intermediates and as a specialty solvent.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

BUTYLENES *mixed isomers*

Supplied as mixed isomers in liquid form under pressure, the principal constituents are *iso*-butylene and *n*-butene-1. The material is used by chemical manufacturers for making chemical intermediates, polymers and gasoline components.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

CUMENE

An aromatic organic compound supplied in liquid form to chemical manufacturers for making intermediates.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

CUMENE CONCENTRATE

An industrial grade hydrocarbon containing typically 60% cumene, 15% ethylbenzene and 10% acetone. It is supplied to blenders as an aromatic gasoline blend stock.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

DICYCLOPENTADIENE CONCENTRATE

A liquid concentrate containing a minimum of 80% $C_5H_6C_5H_6$ supplied to chemical manufacturers for making hydrocarbon resins, insecticides, surface coatings and intermediates.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

DIISOPROPYLBENZENE

An industrial grade hydrocarbon that typically assays 60-65% mixed isomers supplied as a chemical intermediate and as an aromatic gasoline blend stock.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

ETHYLBENZENE

A liquid organic compound supplied to chemical manufacturers for conversion to styrene monomer and for use as a resin solvent.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

ETHYLENE

An industrial gas with a typical analysis of 99.8% minimum C_2H_4 supplied by pipeline to chemical manufacturers for making polyethylene plastics, ethyl alcohol, ethylene glycol, styrene and other intermediates.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

ISOPRENE CONCENTRATE

An aliphatic liquid typically containing 50-53% weight isoprene. Supplied to chemical manufacturers for making isoprene monomers, for *cis*-polyisoprene rubber and as a resin raw material.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

METHANOL *methyl alcohol*

Commercial methyl alcohol supplied to the chemical processing industries for use as an intermediate, for making formaldehyde, as an anti-freeze, a solvent, and a denaturant.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

METHYLACETYLENE/ALLENE CONCENTRATE

An aliphatic concentrate of $CH \equiv C-CH_3$ and $CH_2 = C = CH_2$ supplied to chemical manufacturers in liquid form under pressure as a reactive hydrocarbon for chemical synthesis. It has reaction properties similar to acetylene.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

alpha-METHYLSTYRENE *crude*

A commercial chemical raw material containing 70-75% *alpha*-methylstyrene, 14-17% cumene—supplied as a chemical intermediate to chemical manufacturers for making plastics, surface coatings and synthetic rubber.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

PHENOLIC TARS

A heavy petroleum residue from phenol manufacture supplied to blenders for use in low sulfur fuel oil.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

PIPERYLENE CONCENTRATE

An aliphatic liquid containing approximately 30% minimum assay of *trans*- and *cis*-piperlenes ($CH_2 = CHCH=CHCH_3$). The concentrate is supplied to chemical manufacturers for making hydrocarbon resins and intermediates.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 22a

PROPANE

An industrial gas used as a chemical intermediate or fuel.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key **22a**

PROPYLENE

An olefinic hydrocarbon raw material shipped as a liquid under pressure with 92% minimum of $\text{CH}_3\text{CH}=\text{CH}_2$, the balance principally propane. Supplied to chemical manufacturers for manufacture of intermediates.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key **22a**

RESIN OIL

A highly unsaturated alkyl-aromatic hydrocarbon mixture in liquid form supplied to chemical manufacturers for making high grade hydrocarbon resins.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key **22a**

RESIN PR

Supplied as a heavy liquid aromatic petroleum residue for use in the production of petroleum coke, electrode binder, and miscellaneous industrial pitch products.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key **22a**

TOLUENE

An aromatic liquid hydrocarbon supplied as the commercial grade of $\text{CH}_3\text{C}_6\text{H}_5$ to chemical manufacturers for making organic intermediates and to a variety of industries for use as a solvent.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key **22a**

XYLENES para/meta

Supplied as para/meta xylenes as commercial grade $(\text{CH}_3)_2\text{C}_6\text{H}_4$ to chemical manufacturers to be used in the manufacture of intermediates such as terephthalic and isophthalic acids and their esters.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key **22a**

PHOSPHORUS and PHOSPHORUS DERIVATIVES

AMMONIUM PHOSPHATES

DIAMMONIUM PHOSPHATE (DAP)

Technical grade diammonium phosphate (DA^{P}) is

used as a fire retardant for cellulosic materials such as wood, paper, cotton; as a source of nitrogen and phosphorus in soluble specialty fertilizers, and in the production of phosphors.

Food grade is used in making yeast and in dough conditioners or yeast foods to promote yeast leavening. Its nutrient value is also used in making antibiotics, bacterial starter and metabolic processes in general.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **41a**

MONOAMMONIUM PHOSPHATE (MAP)

Technical grade monoammonium phosphate (MAP) is a fire retardant useful in paper, wood, textiles and other cellulose based products; is the major ingredient in ABC type fire extinguishers; as an acidulant in dye baths and as a source of nitrogen and phosphorus in soluble specialty fertilizer products.

Food grade monoammonium phosphate (MAP) is used in making yeast and in dough conditioners or yeast foods to promote yeast leavening. Its nutrient value is also used in making antibiotics, bacterial starter and metabolic processes in general.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **41a**

CALCIUM PHOSPHATES

BONE ASH (NATURAL)

See Page 36

CALCIUM PYROPHOSPHATE

Food grade phosphate salt supplied in regular and improved grades for use as a dentifrice polishing agent; for food enrichment; and as an ingredient in pharmaceutical preparations. It is also used in manufacture of bone white china.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **41a**

DICALCIUM PHOSPHATE, ANHYDROUS

A food grade phosphate salt used as a high abrasive polishing agent in toothpastes and powders; as a mineral supplement in prepared foods and cereals, and in pharmaceutical preparations.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **41a**

DICALCIUM PHOSPHATE, DIHYDRATE

A food grade phosphate used primarily as a polishing agent in toothpastes and powders; as a mineral supplement; and in pharmaceutical preparations.

MONSANTO INDUSTRIAL CHEMICALS CO.

See Page 36

PY-RAN[®] *anhydrous monocalcium phosphate*

See Page 32

TRICALCIUM PHOSPHATE

A food grade phosphate used as a flow conditioner and anticaking agent in granular and powdered products; as a mineral supplement in food and pharmaceutical preparations; and as a suspending agent in the manufacture of polystyrene.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **44a**

PHOSPHORIC ACIDS

PHOSPHORIC ACID 75, 80 and 85%

Technical grade phosphoric acid is used in the manufacture of phosphate salts, for metal cleaning and treating, as a binder in refractory products, a clarifying agent in sugar processing, in the electropolishing and pickling of steel, as a catalyst in various processes, in industrial and institutional cleaning products, in liquid fertilizer compositions; as a nutrient in industrial waste treatment; as the major component of aluminum bright-dip baths, as a corrosion inhibitor in antifreeze, and rust-proofing and phosphatizing compositions.

Food grade phosphoric acid is used as an acidulant for soft drinks, particularly colas. It is used in the manufacture of gelatin, cottage cheese, some processed cheeses, fats, shortenings, sugar cane refining, jellies and preserves, soya protein processing, nutrient in yeast production, control of bacterial growth in selected processed foods and in the manufacture of food grade phosphate salts.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **41a**

POTASSIUM PHOSPHATES

MONOPOTASSIUM PHOSPHATE

Technical and food grade phosphate salt used to control pH of culture media in penicillin manufacture; for special medicinal purposes; and soluble fertilizers.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **41a**

TETRAPOTASSIUM PYROPHOSPHATE

A technical grade phosphate salt used in detergent formulations; as a processing aid in synthetic (cold) rubber manufacture and as an ingredient for synthetic resin emulsion paints.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **41a**

TRIPOTASSIUM PHOSPHATE

A technical grade phosphate salt used as a processing aid in synthetic (cold) rubber manufacture and as a hydrogen sulfide scavenger in petroleum processes.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **41a**

SODIUM PHOSPHATES

DISODIUM PHOSPHATE, ANHYDROUS

A technical grade phosphate salt used for boiler water treatment; in making glazes for potteries, porcelains and chinaware; in various chemical processes; in the preparation of enamels; in tinning; in leather tanning; as a bath ingredient in galvanoplastic work; in the manufacture of pigments such as cobalt phosphate; in the weighting of silk and impregnating of textiles in dyeing and calico printing.

A food grade is supplied for use in process cheese, quick cooking cereal products, evaporated milk and pharmaceutical applications.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **41a**

DISODIUM PHOSPHATE, DUOHYDRATE

A food grade phosphate used for preventing coagulation during processing of condensed milk and as an emulsifying agent in processing cheese.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **44a**

EMULSI-PHOS[®] *cheese emulsifier*

A food grade phosphate specially designed for use in process cheese, cheese food and cheese spreads.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **44a**

INSOLUBLE SODIUM METAPHOSPHATE

An insoluble food grade phosphate salt that is used primarily as a polishing ingredient in toothpaste and powders.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

LEVN-LITE® sodium aluminum phosphate
See Page 31

MONOSODIUM PHOSPHATE (MSP)

A technical grade phosphate salt used in metal cleaners, water conditioning, as an electroplating solution buffer, and as a textile dyeing aid.

A food grade is supplied for use as a mineral supplement, a pharmaceutical ingredient, as an acidulant in powdered beverages, processed meat products and frozen egg preservation.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

OILFOS® glassy sodium phosphate

Oilfos is a glassy polyphosphate used exclusively for controlling viscosity of oil well drilling muds.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

PAN-O-LITE® sodium aluminum phosphate
See Page 32

SODIUM ACID PYROPHOSPHATE (SAPP)
See Page 32

SODIUM HEXAMETAPHOSPHATE

A technical grade phosphate salt used in water softeners, in boiler water treatment, as an ingredient in dishwashing compounds and detergents, and as a deflocculating agent.

The food grade is supplied for use in dietary supplements and in curing meat products.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

SODIUM TRIPOLYPHOSPHATE (STP)

The technical grade of STP is used as a detergent builder; for water softening; in conditioning oil well drilling muds; and as an additive in a variety of products and processes to eliminate scum and soap curds in hard water; to clean metal, deflocculate clays, to improve textile processing.

The food grade STP, sold under the trademark *Nutrifos®*, is used in curing hams and related meat products.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

SQ PHOSPHATE *sequestrant*

Supplied as a glassy polyphosphate of high sequestering power for use in formulating industrial cleaning compounds, dishwashing formulations, and dairy cleaners.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

STABIL-9® sodium aluminum phosphate
See Page 32

TETRASODIUM PYROPHOSPHATE

A technical grade phosphate salt used as a detergent builder; for conditioning oil drilling muds; to formulate household and industrial cleaners and detergents; as a dye bath additive and for metal cleaning; and as a deflocculant in clay processing.

A food grade is supplied for use in meat curing compounds, in instant puddings, as a stabilizer for protein foams, and an antidarkening agent for potatoes.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

TRISODIUM PHOSPHATE, ANHYDROUS (TSP/A)

A technical grade phosphate salt used in heavy duty industrial metal cleaning; water treatment for softening and conditioning; and in abrasive hard surface cleaners.

A food grade is supplied for use as a basic emulsifier in process cheese and as cooking-speed promoter in quick-cook cereals.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

TRISODIUM PHOSPHATE, CRYSTALLINE

A technical grade phosphate salt used principally in heavy duty metal cleaners and in water treatment for softening and conditioning.

A food grade is supplied for use in process cheese, cheese food and cheese spreads as a potent emulsifier.

MONSANTO INDUSTRIAL CHEMICALS CO.

PHOSPHORUS, ELEMENTAL

A pale yellow to deep straw colored waxy solid used as an intermediate in the production of phosphoric acid and organophosphorus compounds, and as an alloying agent in copper alloys.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

PHOSPHORUS OXYCHLORIDE

Supplied to chemical manufacturers for use as a chlorinating agent and catalyst in making various intermediates, medicinals, dyestuffs and a reagent for making acetic anhydride and organic phosphates.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 21a

PHOSPHORUS PENTASULFIDE

Supplied as a distillation-purified light greenish-yellow powder in both high and low reactive grades. It is used in the manufacture of lubricating oil additives, thiophosphate insecticidal compounds, salts for ore flotation; as an intermediate for organic synthesis; as a catalyst in production of blown asphalt.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 21a

PHOSPHORUS TRICHLORIDE

Supplied as a liquid, it is used by chemical manufacturers variously as a chlorinating agent, catalyst, and reagent for making acetic anhydride, organic phosphates, germicides, medicinals and in producing iridescent metallic deposits.

MONSANTO CHEMICAL INTERMEDIATES CO.

Locator Key 21a

PLASTICIZERS

DICYCLOHEXYL PHTHALATE (DCHP)

Dicyclohexyl phthalate is widely used as a plasticizer for nitrocellulose. It contributes adhesion, oil resistance, heat sealability and hardness. DCHP is also used in combination with liquid plasticizers in polyvinyl acetate, and is used in acrylic lacquers and heat activated adhesives.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

DI(2-ETHYLHEXYL)ADIPATE (DOA) dioctyl adipate

Dioctyl adipate is a high quality plasticizer for imparting low-temperature flexibility to polyvinyl chloride and synthetic rubber compositions.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

DIUNDECYL PHTHALATE (DUP)

DUP is a high molecular weight phthalate plasticizer for PVC resin, offering the best low temperature properties and lowest volatility among the phthalate plasticizers. DUP finds use in PVC wire insulation and PVC automotive interior components because of its excellent performance.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

HB-40® partially hydrogenated terphenyl

HB-40 is a plasticizer for vinyl sheeting, films and fabric or paper coatings, and for vinyl protective coatings and adhesives. Used to plasticize vinyl profile extrusions, tubing, wire coating and injection- and slush-molding compounds. Plasticizer for styrene-water dispersion paints, paper coatings, adhesives, styrene casting resins, and polysulfide sealants.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 8 mixture of N-ethyl-ortho- and para-toluenesulfonamides

Santicizer 8 is one of the best plasticizers known for synthetic polyamides such as nylon and related resins. It is an excellent plasticizer for cellulose acetate, giving a brilliance and polish not obtainable with other plasticizers. Being practically insoluble in petroleum hydrocarbons, it is a valuable plasticizer for coatings designed to withstand gasoline and related products.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 9 mixture of ortho- and para-toluenesulfonamides

Santicizer 9 differs greatly from other plasticizers in its action. Relatively small amounts impart a gloss to polished articles, give smooth working and uniform curing of molded thermosetting products. Blends readily with most synthetic resins, does not impart the softening action of liquid plasticizers. Particularly valuable to the makers of molding compositions.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 79-TM

Santicizer 79-TM is a trimellitate ester recommended for its permanent qualities in film and sheeting as well as wire and cable.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 97 di(n-heptyl, n-nonyl)adipate

Santicizer 97 is an adipate plasticizer designed to give polyvinyl chloride film, sheet, and coatings

0684188

extreme low temperature flexibility. In all three applications, Santicizer 97 imparts good hand and drape. Santicizer 97 is FDA regulated for use in food contact applications.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 141 alkylaryl phosphate

Excellent for use in polyvinyl chloride films, sheets, extrusions, moldings, organosols and plastisols. Also, Santicizer 141 is a fire retardant and may help meet flammability requirements. Santicizer 141 is regulated by the Food & Drug Administration (FDA) for use in food packaging films, protective coatings and adhesives.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 143 modified triaryl phosphate

Santicizer 143 exhibits the plasticizing efficiency of the alkyl diaryl phosphates while retaining the flame-retardant efficiency of the triaryl phosphates. Santicizer 143 is compatible with polyvinyl chloride, vinyl nitrile elastomers, latex emulsions and cellulosic materials.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 148 alkyl diaryl phosphate

Santicizer 148 is a flexibilizing, flame-retarding phosphate particularly useful as a plasticizer for polyvinyl chloride resins for use in wall coverings, film and sheeting and drapery backings which must meet specific fire performance specifications. It imparts excellent low temperature flexibility and provides lower smoke generation characteristics in several formulations. Santicizer 148 is also excellent as a plasticizer for rubber, particularly the vinyl nitriles.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 154 triaryl phosphate

Santicizer 154 is a flame-retardant triaryl phosphate plasticizer suitable for use in a variety of polymer systems. It is compatible with a number of resins including polyvinyl chloride and vinyl nitrile rubber, vinyl acetate emulsions and cellulose. Santicizer 154 is an ideal replacement for tricresyl phosphate and cresyl diphenyl phosphate.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 160 butyl benzyl phthalate

Santicizer 160 is a general purpose plasticizer for polyvinyl chloride and is widely used in the flooring industry for its high degree of plasticizing efficiency, stain resistance and adhesive migration resistance. Santicizer 160 is also compatible with

a wide range of other resin systems including acrylics, urethanes, polyvinyl acetate, cellulose (ethyl and nitro), etc.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 261

Santicizer 261 is a monomeric plasticizer that offers high performance, comparable to low molecular weight polymeric, yet still retains the easy processing features of monomeric plasticizers. It finds application in film and sheeting, coated fabrics, plastisols, organosols, vinyl foams, acrylic coatings and polysulfide systems.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 278

Santicizer 278 is a fast fusing, extremely low volatile monomeric plasticizer that offers a high degree of permanence, comparable to polymeric, yet retains the excellent processing characteristics of monomers in vinyl systems. The extremely low volatility and permanence of Santicizer 278 makes it one of the products of choice for polysulfide systems.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 409

Santicizer 409 is a permanent plasticizer used in wire coatings and tapes. It is also widely used in high-quality film and sheeting (adhesive backed), organosol fabric coatings, refrigerator gasketing and in other applications requiring a high degree of permanence and resistance to extraction.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 411

Santicizer 411 is a permanent polymeric plasticizer used in outerwear, baby pants, coated cloth (for automobile and furniture upholstery, etc.), wall covering, wire coatings, modified plastisols and organosols, vinyl-metal laminates, and high density foam vinyl.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 412

Santicizer 412 is a permanent plasticizer used in wire and cable compounds, and vinyl plastisols.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 429

Santicizer 429 is a highly efficient permanent plasticizer which provides a good over-all balance of permanent properties.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 546

Santicizer 546 is a fast fusing primary plasticizer for polyvinyl chloride. Santicizer 546 also has the unique ability to provide a dry feel and "slip" to the surface of plastisol prepared plastic films.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 711 diheptyl, nonyl, undecylphthalate

Santicizer 711 is a general purpose plasticizer for PVC resin which outperforms DOP (dioctyl phthalate) in the critical areas of low temperature flexibility, volatility and plastisol viscosity stability. Often, Santicizer 711 is used to replace DOP and adipate plasticizer blends.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 42a

SANTICIZER® 712-TM

Santicizer 712-TM is a trimellitate ester recommended where excellent retention of physical properties is desired for 125°C insulation and automotive applications.

MELAMINE and UREA RESINS

RESIMENE® MELAMINE RESINS laminating

Melamine-formaldehyde resins in syrup, liquid and spray-dried powder form, *Resimene* industrial resins are used for making impregnating solutions. These thermosetting resins are used to bond glass fibers, thin wood plies, cloth or paper to make heat, flame, and chemically resistant laminates. The decorative laminates are used for furniture, kitchen cabinets and sink counter tops. The industrial laminates are used for electrical panels, machinery components, and appliances. *Resimene* resins produce durable surfaces, extremely hard, color stable and with high arc resistance.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

RESIMENE® MELAMINE-FORMALDEHYDE

RESIMENE® UREA-FORMALDEHYDE RESINS coatings

Supplied in solution form in organic solvents, *Resimene* resins are used to formulate baked on surface coatings. Available as high solids content solutions, *Resimene* resins impart improved surface hardness, weather resistance, and resistance to alkali and chalking. They promote fast cure and excellent color retention. Water soluble grades are also available. The formulated coatings are used on appliances, automotive products, and fabricated industrial parts.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

RESLOOM® MELAMINE

Supplied in powder or liquid form, *Resloom* resins are a series of essentially monomeric melamine textile finishes permanently effective on fabrics made from a wide range of textile fibers. They are used to impart shrinkage control, wrinkle resistance and textural effects to cotton, rayons, synthetics and wools.

MONSANTO PLASTICS & RESINS CO.

NYLON RESINS

VDYDNE® nylon and nylon copolymer resins

A family of 66, 66/6 copolymers, 69, and specialty nylon resins designed for a wide variety of molding and extrusion applications. Grades include general purpose, nucleated, heat stabilized, color stabilized, and high viscosity types. They are supplied in natural pellets and salt and pepper pellet blends. Typical applications include fasteners, connectors, insulators, electrical systems and fuel system parts, gears, bearings, films, and filaments in such industries as appliances, automotive and transportation, electrical/electronic, industrial and machinery, packaging, hardware, and textile.

MONSANTO PLASTICS & RESINS CO.

Locator Key 52a

VDYDNE® R mineral-reinforced nylon resins

A family of mineral-reinforced polyamide engineering thermoplastics designed primarily for molding applications. Vydne R offers high rigidity and tensile strength, resistance to creep under load, and high heat distortion temperature. Processing features include fast cycling (high productivity) and minimum sink mark development. Grades include general engineering and heat stabilized types. They are supplied in natural and black pellets. Used for performance parts including replacement of die cast metals, complex metal assemblies, and more expensive engineering plastics. Suggested applications include appliance, electrical/electronic, industrial, textile, and transportation industry parts.

PHENOLIC RESINS

PHENOLIC and RESORCINOL RESINS

See Page 19

RESINOX® PHENOLIC liquids

Supplied as water solutions, Resinox industrial resins possess excellent resistance to high heat, maximum bond strength and good chemical resistance. They are used for impregnating and coating filler materials such as paper, cloth and wood for use in filters, battery separators, pads, scrim, and formed veneers; as the bonding agent for abrasive grits in friction elements and grinding wheels; to bond glass and rock wool for thermal and acoustical insulation; and as foundry sand core binders.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

RESINOX® PHENOLIC liquid solutions

Supplied as liquid phenolic solutions for use as surface coating resins. Resinox solutions impart high heat resistance and promote good chemical resistance in baked enamel and industrial finishes for can, drum and tank car linings; special primers and coatings; and wire enamels. They are used by the paint, varnish and lacquer, automotive, chemical, machinery and appliance industries.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

RESINOX® PHENOLIC resin compound

Supplied in powder, Resinox industrial resins possess excellent resistance to high heat, maximum bond strength and good chemical resistance. They are used in the manufacture of resinoid grinding wheels, friction elements, brake linings, wood flour, bonded fiber mat and foundry sand shell molds and cores.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

RESINOX® PHENOLIC varnishes

Supplied in alcohol solutions, Resinox varnishes are used for laminating or impregnating filler materials, such as paper, cloth, wood, glass or asbestos. Used in decorative laminate core stock; to make electrical and mechanical grade laminates for radio, TV and home electrical appliances; for composition gears, ball-bearing races, pulleys and bushings; for making oil, chemical and paper filters; and as sand binders for shell molding. Special high heat resistant formulations are available for use with glass, asbestos and similar fillers for aircraft components and high performance systems. The resins provide tough, durable, heat resistant bonds that also resist acids and weak alkalis.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

POLYIMIDE RESINS

SKYBOND®

Skybond polyimide resins are high temperature resistant resins with excellent electrical characteristics. They are fire resistant and give low smoke relative to many other resins. A wide range of formulations of Skybond offer preferred processing characteristics and optimum properties in the cured polyimide. Uses include aircraft components, radome construction, filament windings, graphite fiber reinforcements, adhesive formulations, printed circuit boards and foams.

POLYVINYL ACETATES

GELVA® MULTIPOLYMER RESIN SOLUTIONS

Supplied as water-white or slightly yellow solvent solutions, the amounts of Gelva resin solids range from 40 to 55% in solvents consisting of ester-aliphatic hydrocarbon blends or alcohol. The resins in Gelva multipolymer resin solutions are based on vinyl acetate, acrylic, and other comonomers. Solution viscosities range from 500 to 40,000 cps @ 25°C. The acrylic-containing grades dry to permanently tacky films. The films from all grades are water resistant. Gelva multipolymer resin solutions are used to make pressure sensitive coatings and laminating adhesives for difficult-to-bond surfaces. They are also used in formulating surface coatings and for specialty paper coatings.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

GELVA® RESIN EMULSIONS

Supplied as milk-white aqueous dispersions of a full range of PVAc homopolymers and copolymers that provide a choice of viscosity, particle size, molecular weight, emulsifying system, and film forming properties. Emulsions are available that are borax stable, dextrine compatible and with a range of solvent tolerance. They are widely compatible with plasticizers, other film formers, fillers, and colorants. Films and coatings produced by Gelva resin emulsions offer a range of useful properties including excellent adhesion, high tensile strength, hardness, range of heat-sealing temperatures, water resistance and others. They are used broadly as film formers for paints, coatings, binders, adhesives, impregnants.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

GELVA® RESIN SOLUTIONS

Viscous solvent solutions of polyvinyl acetate. Gelva V-7-M50 in methyl alcohol. Viscosity 2,500 cps. Total solids 50%. Films and coatings produced from the solution have excellent gloss, clarity and water resistance. They are also noncorrosive and neutral. Used for bonding paper, wood, glass, leather, textiles, ceramics, metal foil and many plastic materials; in shoe cements; in laminating metal foil to cellophane; for preparing plastic wall tile adhesives; and in the paper industry to produce transparent, light and oxygen stable high gloss coatings. Also used as overprint varnishes, greaseproof coatings and pigment binders.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

POLYVINYL ALCOHOL RESINS

GELVATOL® RESINS

White high bulk density powdered resins supplied in a large number of grades in varying degrees of polymerization, per cent hydrolysis and residual acetate content. Resins are water soluble. Viscosities of 4% aqueous solutions range from approximately 2 cps for Gelvatol 40-10 to 45 cps for Gelvatol 20-90. The resins are nondusting, make clear solutions in water, and cast films are extremely tough with excellent solvent, oil and grease resistance, high tensile strength, and a high degree of impermeability to most gases. Typical applications include dry mix adhesives and building products; textile sizing and finishing; paper coating and sizing; as protective colloids for emulsion polymerization; as binders for china, ceramics, etc.; photosensitive coatings on stencil screens and printing plates; and as water soluble films for packaging soaps, detergents, chemicals, seed, etc.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

POLYVINYL BUTYRALS

BUTVAR® RESIN DISPERSION BR

A milk-white aqueous dispersion of plasticized polyvinyl butyral resin, Butvar Dispersion BR has a viscosity of 1500 cps and contains 40 parts plasticizer per 100 parts resin. Air-dried films cast from it are tough, colorless, transparent, dry at room temperature and are unaffected by boiling water. The films are strong and adhere well to a range of surfaces; they resist degradation by water, heat and sunlight. Butvar Dispersion BR is used in the textile industry to impart abrasion resistance, durability, strength, slippage control and reduced color crocking to a variety of materials; as abrasion resistant finishes for automobile seat belts and parachute harnesses; as a soft, full-bodied finish for rayon, cotton, or nylon; as a durable, nonraveling finish for filament yarns; and as a finish for curtain and drapery fabrics, glass fabrics, upholstery goods, webbing, awnings, canvas and duck. The resin is also suitable for rug backing, and as greaseproof, washable coatings for wallpaper, window shades and packaging materials. It can be formulated for strippable coatings on metal and other substrates.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

0684192

BUTVAR® RESINS

Butvar polyvinyl butyral resins are white, free-flowing powders supplied in seven resin types or grade forms with various hydroxyl content whose solutions provide a range of viscosities. (Viscosity of a 10% ethanol solution of Butvar B-79 is 55 cps; of "B-72", is 1570 cps). Butvar resins are generally soluble in alcohols, glycol esters, and certain mixtures of polar and nonpolar solvents. They are compatible with phthalate and phosphate plasticizers, castor oil, and other flexibilizers. The films are colorless and transparent. Butvar resins offer a variety of outstanding performance properties: film clarity, adhesion, flexibility, abrasion and water resistance. They are recommended for formulating metal and wood primers; structural and hot melt adhesives; printing inks; and waterproof textile coatings. In surface coatings, Butvar resins improve intercoat adhesion, flexibility, impact and abrasion resistance and flow properties. They are recommended for upgrading the coating performance of thermosetting phenolics, ureas, melamines, epoxies, alkyds, polyurethanes, and polyesters.

SAFLEX® VINYL BUTYRAL FILM

Saflex polyvinyl butyral is a continuous adhesive film — supplied in clear, translucent, tinted or gradated color — for the plastic interlayer in laminated safety glass. It is a tough and resilient laminating material with excellent optics and adhesion to glass. The functional properties provided by Saflex include energy absorption, heat insulation, glare control and sound reduction. Saflex is used as the interlayer in the manufacture of high-penetration resistant windshields. Other applications include glazings for aircraft, and for architectural security and decorative glass.

MONSANTO PLASTICS & RESINS CO.

Locator Key **53a**

POLYVINYL FORMAL RESINS

FORMVAR® RESINS

Formvar polyvinyl formal resins are white, free-flowing powders supplied in several grades that offer a range of solubility characteristics and solution viscosities. A 5% ethylene chloride solution of Formvar 5/95E ranges from 5-11 cps; "15/95E" from 50-80 cps. Formvar resins are soluble in phenols, alcohol mixtures, aromatic hydrocarbons and some chlorinated hydrocarbons. They can be plasticized with phthalate, phosphate, glycolate, and many other plasticizers. Each grade has particularly useful properties. Formvar 15/95E, for example, is excellent for making tough, heat-resist-

ant enamels for wire used in hermetic systems. The enamels are solderable, bondable, and have high resistance to burn-out and cut-through and excellent solvent resistance to common refrigerants. Formvar resins are also suitable for formulating structural adhesives, hot melt bonding agents, wash primers, can and drum linings, and wood and knot sealers.

LUSTRAN® ABS molding and extrusion resins

Lustran ABS acrylonitrile-butadiene-styrene thermoplastics are supplied in a full range of molding and extrusion grades that offer optimum processing characteristics and a range of physical property values in the finished product. Lustran plastics are high impact materials with special values for quality applications such as refrigerator inner liners, appliance housings, automotive parts and industrial components.

MOLDING MATERIALS: Supplied in a wide range of balanced rigidity and resilience, grades are available in medium to high impact strength with commensurate rigidity, good gloss, high tensile strength, and abuse resistance. Special grades with unique surface characteristics are available to make "platable" products; the materials provide adhesion of the metal plating and good resistance to thermal cycles.

EXTRUSION COMPOUNDS: Supplied in a series of grades that provide a range of flexibility, resilience, tensile strength, elongation, and abrasion resistance. Special grades are available for extruding low gloss sheet with equivalent other physical properties.

MONSANTO PLASTICS & RESINS CO.

Locator Key 52a

LUSTRAN® SAN molding resins

Lustran SAN styrene-acrylonitrile molding resins are clear rigid thermoplastics for molding high quality articles requiring transparency, brilliant surface, chemical resistance and stiffness. Supplied as Grade 31 general purpose SAN copolymer offering excellent processability and clarity; and Grade 29, a higher strength material with greater chemical resistance.

MONSANTO PLASTICS & RESINS CO.

Locator Key 52a

LUSTREX® POLYSTYRENE extrusion materials

Supplied in pellet form for extruding into sheet, film, or profile shapes. Available in several commercial grades ranging from crystal polystyrene through rubber-modified medium and high impact materials. A typical use of the extruded products is thermoformed containers, trays, cups and lids.

MONSANTO PLASTICS & RESINS CO.

LYTRON® LATICES

Lytron emulsion latices are aqueous dispersion of polystyrene and styrene-acrylate copolymers that are used as pigments, binders, saturants or coatings. They are used as opacifiers for liquid detergent systems, bowl cleaners, pharmaceutical products, and related items; in textile saturating for making shoe components such as box toes and shoe counters; for stiffening foam rubber; and in water-based paints, specialty paper coatings, pigment vehicles and adhesives. They are also used as plastic pigments in paper coating.

MONSANTO PLASTICS & RESINS CO.

Locator Key 53a

LYTRON® RESINS

Styrene-maleic anhydride copolymer resins in powder form used as protective colloids and film formers. Lytron resins promote adhesion and stabilize, harden and thicken aqueous systems. They are alkali-soluble or solvent-soluble for use in adhesives, coatings, and as stabilizers, emulsifying agents, protective colloids and pigment dispersants. Lytron resins are used by adhesives manufacturers, textile processors, surface coating manufacturers, and producers of emulsion floor waxes and detergents.

STYRENE-ALLYL ALCOHOL RESINS

These resins supplied in flake form are low molecular weight copolymers of styrene-allyl alcohol. RJ-100® and RJ-101 resins can be used directly as hard resin additives or converted to esters, ester-adducts, ester emulsions. They impart excellent chemical and corrosion resistance to both organic solvent and aqueous coatings. The resin's derivatives are used as latex modifiers for exterior paints, in industrial primer vehicles, in printing inks, and in alkyd and polyester resin manufacture. As a resinous polyol component of polyurethane coatings and rigid foams, SAA offers excellent cost/performance values.

PROCESS CONTROL EQUIPMENT

INSTRUMENTATION, ANALOG PROCESS CONTROL

The ac² analog instrumentation includes a complete line of controllers, computing elements, computer-compatible instruments, signal converters, decision instruments, accessory stations, annunciators, recorders and power supplies with cases, cabinets and field junction boxes. Instrumentation is available for both integral architecture and split architecture configurations. The system features high reliability and compact displays with control-by-exception indication. Unique color-coded field and control room wiring simplifies installation. The complete line of maintenance equipment includes a portable, simple to use go/no-go tester. Single-unit signal converters and alarms for surface and rack-mounting are also available.

FISHER CONTROLS CO.

Locator Key 33a

INSTRUMENTATION, ANALOG PROCESS MEASUREMENT

A broad line of over 16 types of transmitters for measuring pressure, differential pressure, square root differential pressure, liquid level, solids level, density, temperature, and differential temperature are available. Features include rugged construction, easy range change and calibration, 2-wire output, and intrinsically safe ratings when used with a series of intrinsic safety barriers that are also available.

RZ-100* VULCANIZATION ACCELERATOR

N,N-dimethylcyclohexylamine salt of dibutyldithiocarbamic acid

An accelerator for very fast room or low temperature cures such as required for latex, cements and proofings. Offers good aging performance and practically no staining and discoloration.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43a**

SANTOCURE® VULCANIZATION ACCELERATOR

N-cyclohexyl-2-benzothiazolesulfenamide

A delayed action accelerator used alone or with a small quantity of secondary accelerator in natural and synthetic tire treads, sidewalls, etc. Santocure gives a shorter scorch delay than Santocure NS. Slight discoloration in light or white articles at high concentrations. Nonstaining.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43a**

SANTOCURE® MOR VULCANIZATION ACCELERATOR 2-(morpholiniothio)benzothiazole

An excellent accelerator where extended processing safety is required. Used in thick treads and extrusions, stocks with high loadings of furnace blacks such as ISAF or SAF; stocks which are to be stored for long periods such as camelback. Slight discoloration in light or white articles at high concentrations. Nonstaining.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43a**

SANTOCURE® NS VULCANIZATION ACCELERATOR N-tert-butyl-2-benzothiazolesulfenamide

A delayed action fast curing accelerator used alone or with a small quantity of secondary accelerator in natural and synthetic tire treads, sidewalls, etc. Santocure NS gives processing safety intermediate between Santocure and Santocure MOR accelerators. The higher modulus of Santocure NS stocks frequently permits a 10% reduction in usage. Slight discoloration in light or white articles at high concentrations. Nonstaining.

THIOFIDE® MBTS VULCANIZATION

ACCELERATOR 2,2'-dithiobis (benzothiazole); benzothiazyl disulfide; 2,2'-dibenzothiazyl disulfide

Thiofide gives flat, moderately fast cures in both natural rubber and synthetics. It is particularly useful in white or very bright colored stocks. Secondary acceleration is usually required for synthetic rubbers. Thiofide also acts as a plasticizer/retarder in poly-chloroprene. Nondiscoloring and nonstaining.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 43a

THIOTAX® MBT VULCANIZATION ACCELERATOR

2-mercaptobenzothiazole

Vulcanization accelerator that gives flat, fast cures over a wide range of curing temperatures in both natural and synthetic rubbers. Thiotax is a good secondary accelerator for butyl and EDPM compounds. Available in an oiled and unoled powder form. Nondiscoloring and nonstaining.

*Trademark of Monsanto Limited

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 43a

THIURAD® VULCANIZATION ACCELERATOR

bis(dimethylthiocarbamyl)disulfide; tetramethylthiuram disulfide

Sulfur bearing accelerator used as a secondary accelerator with Santocure or Thiofide accelerators in a wide range of products. It is used in sulfurless cures with Sulfasan R vulcanizing agent to obtain heat resistant compounds with NR/SBR and nitrile stocks. Available in oiled and unoled powder form and pellet form.

ANTIOXIDANTS, ANTIOZONANTS and ANTIDEGRADANTS

DI-n-PROPYLAMINE

See Page 38

FLECTOL® H ANTIOXIDANT polymerized

1,2-dihydro-2,2,4-trimethylquinoline

One of the best all-purpose antioxidants, where a slight buff discoloration of the product can be tolerated. Powerful and nonblooming; resists effect of heat deterioration and normal aging. Combats product degradation promoted by copper and other heavy metals. Suitable for dry rubber and latex.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 43a

FLECTOL® FLAKES ANTIOXIDANT polymerized 1,2-dihydro-2,2,4-trimethylquinoline

Has a lower softening point than Flectol H. Used in tires, belts, hose, camelback and general mechanicals.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 43a

FLECTOL® ODP ANTIOXIDANT an octylated diphenylamine

For protection of rubber against heat deterioration and normal aging. It causes less discoloration than most other full-power antioxidants. It is a good antioxidant for neoprene.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 43a

MONAACLERE® ANTIOXIDANT styrenated phenol

Low cost, medium activity liquid antioxidant for general purpose use. Nonstaining and nondiscoloring.

*Trademark of Monsanto Limited

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 43a

SANTOFLEX® AW ANTIOXIDANT 6-ethoxy-1,2-dihydro-2,2,4-trimethylquinoline

An antiozonant/antioxidant for both natural and synthetic rubber. Used as a flex-cracking inhibitor, particularly in tire and belting compounds. Strong staining and discoloration.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 43a

SANTOFLEX® DD ANTIOXIDANT 6-dodecyl-1,2-dihydro-2,2,4-trimethylquinoline

An excellent antioxidant and flex-cracking inhibitor especially for dynamic applications in tire compounds, belting, camelback, hose, mechanicals, and footwear. Also an efficient stabilizer and gel suppressant for SBR stocks during mixing and storage.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 43a

SANTOFLEX® IP ANTIOZONANT N-isopropyl-N'-phenyl-p-phenylenediamine

An efficient antiozonant, antioxidant, flex-cracking and fatigue inhibitor. Used in tires, sidewalls, cushion gums, carcass stocks, camelback, belting, hose, cables, mountings, buffers and mechanical products exposed to static, dynamic and intermittent-dynamic operating conditions.

SANTOFLEX® LC ANTIDEGRADANT an antidegradant blend

An antiozonant used in retread rubber to provide excellent low cost protection against oxygen, heat, ozone, and fatigue or flex-cracking.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43a**

SANTOFLEX® 13 ANTIOZONANT N-(1,3-dimethylbutyl)-N'-phenyl-p-phenylenediamine

Outstanding antidegradant for all commonly used elastomers. In both natural and synthetic rubber it is a highly effective antioxidant/antiozonant, and flex-cracking inhibitor. Serves as an excellent polymer stabilizer while retaining carryover activity as an antiozonant/antioxidant.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43a**

SANTOFLEX® 77 ANTIOZONANT N,N'-bis(1,4-dimethylpentyl)-p-phenylenediamine

An antiozonant for all commonly used elastomers and particularly effective for static applications where it can replace undesirably high loadings of wax. Gives good short-term dynamic protection.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43a**

SANTOFLEX® 134 ANTIOZONANT an alkylaryl-p-phenylenediamine mixture

For stabilizing SBR in emulsion polymers and particularly oil extended and oil/black masterbatches where the stabilizer is added with the oil. Also used in solution polymers, with or without oil, where staining can be tolerated.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43a**

SANTOFLEX® 134-D ANTIDEGRADANT a mixture of Santoflex 13 and Santoflex DD

A low cost antidegradant blend used to give effective oxygen/ozone protection in tire stocks and general mechanicals. Efficient stabilizer for synthetic elastomers. Staining and discoloring.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43a**

SANTOFLEX® 715 ANTIOZONANT a blend of Santoflex 13 and Santoflex 77 class antidegradants

A blended antiozonant used in natural and synthetic rubber to achieve effective resistance to ozone fatigue and aging in products submitted to static, dynamic and intermittent-dynamic service conditions.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43a**

SANTOFLEX® 734 ANTIDEGRADANT a blend of alkyl-aryl and dialkyl p-phenylenediamines

Combines protective action of Santoflex 13 and Santoflex 77 in a single blend. Used in tires and general mechanicals.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43a**

SANTOVAR® A ANTIOXIDANT 2,5-di-tert-amylhydroquinone

For the protection of uncured rubber against oxidation; retains tack in uncured films and tapes. It also inhibits oxygen attack on unsaturated resins and oils. Potential short-stop for nitrile production.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43a**

SANTOWHITE® 54 ANTIOXIDANT modified hindered phenol

Santowhite 54 is a nonstaining, nondiscoloring antioxidant of moderate strength. It is easily emulsified for use in latex and is easily incorporated in dry rubbers.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43a**

SANTOWHITE® 54-S ANTIOXIDANT solid form of Santowhite 54

Santowhite 54-S is two parts Santowhite 54 and 1 part inert filler used where a solid form of Santowhite 54 is preferred.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43a**

SANTOWHITE® MK ANTIOXIDANT reaction product of 6-tert-butyl-m-cresol and SCl_2

A nonstaining, nondiscoloring antioxidant used for general purpose protection. A liquid product, slightly less active than Santowhite Crystals.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43a**

SANTOWHITE® CRYSTALS ANTIOXIDANT 4,4'-thiobis (6-tert-butyl-m-cresol)

For the protection of light colored rubber from oxidation. It is also useful in any rubber product used in contact with surfaces such as lacquer or enamel which are subject to staining by ordinary antioxidants. Santowhite Crystals provide excellent protection against normal aging.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43a**

SANTOWHITE® POWDER ANTIOXIDANT 4,4'-butylidenebis (6-tert-butyl-m-cresol)

High activity antioxidant suitable for all white or light colored products where color is critical and also suitable for latex compounding.

SANTOGARD® PVI PREVULCANIZATION

INHIBITOR *N-(cyclohexylthio)phthalimide*

Santogard PVI is a prevulcanization inhibitor for synthetic and NR. It is used with all sulfenamide or thiazole accelerators to control processing safety with no resultant changes in curing characteristics or vulcanizate properties. Santogard PVI improves green stock storage stability and can be used to

recover scorchy stocks. Useful in a wide variety of applications otherwise temperature limited, such as faster extrusion, hotter processing and single-stage mixing.

RUBBER PROCESSING EQUIPMENT

MONSANTO® COLD FEED EXTRUDER

Monsanto cold feed extruders produce extrusions of rubber hose, sponge, tire components and profiles. Feed stock is in strip or pellet form. Screw diameters between 1.8 and 10 inches are available. Screw speed ranges between 2 and 72 rpm are achieved. Various screw types and extruder L/D ratios are available. Swing dual head design permits ease of die changing with minimal down time.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 43b

MONSANTO® COLD FEED VACUUM EXTRUDER

A line of cold feed vacuum extruders produce porosity free extrusions of rubber hose, sponge and profiles. Feed stock is in strip or pellet form. Screw diameters between 1½ and 8 inches are available, screw speed ranges between 2 and 72 rpm are achieved. Various screw types and extruder L/D ratios are available. Swing dual head design permits ease of die changing with minimal down time.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 43b

MONSANTO® HOT AIR VULCANIZING TUNNEL

This unit holds microwave-heated extrusions at uniform vulcanizing temperature for desired level of cure. Operating temperatures as high as 500°F can be employed. Twenty air changes per minute prevent hot spots.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 43b

MONSANTO® HOT FEED EXTRUDER

A line of hot feed extruders are available from 2.5 to 10 inch diameters. Dual swing head design permits ease of product change.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 43b

MONSANTO® LCM (LIQUID CURING MEDIUM) UNIT

In this Monsanto LCM unit, the extrusion is submerged in a constant-temperature bath of molten salt for curing. Multiple zoned electric heaters hold the entire bath at uniform curing temperature and eliminate temperature gradients that can cause poor cures. Unit is designed with special attention to personnel safety and environmental compliance.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 43b

MONSANTO® MICROWAVE CONTINUOUS RUBBER VULCANIZER

This unit is placed at the extruder end and quickly and uniformly raises the extrusion temperature to vulcanizing temperatures. The patented roller conveyor provides more efficient heating and prevents costly maintenance problems encountered with conveyor systems. The use of 2.5 kw power packs provide flexibility and ease of service. Power packs are compact and low in weight. Easily removed for servicing or replacement by your maintenance personnel; this avoids line stoppages required to service a heavier, in-place power pack. Accommodates single extrusions up to 5" diameter...larger diameter for special applications.

RUBBER TESTING INSTRUMENTS

CAPILLARY RHEOMETER, AUTOMATIC

Monsanto® Automatic Capillary Rheometer (ACR) is a low cost precision instrument for measuring the flow properties of any viscous material. Test time takes approximately 10 minutes, and is completely automatic. Data is reported directly by display. The ACR gives accurate, reproducible results showing the flow characteristics under typical processing conditions. The unit is designed for quality control as well as research applications. The ACR will provide flow data on thermoplastics, thermosets, textile fiber resins, adhesives, and elastomers over a shear rate range of 10^{-1} to 10^6 sec.⁻¹.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43b**

MELT INDEXER

A quality control instrument for the rapid, accurate measurement of the melt indexer of thermoplastics according to the ASTM D-1238 method.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43b**

MONSANTO® CONE-RHEOMETER

The Monsanto Cone-Rheometer is a table model rheometer which follows the course of the vulcanization reaction and simultaneously records pressure development associated with the curing and cell development of sponge products. Data are presented on a two-pen strip chart recorder as continuous plots of 1) the stiffness (shear modulus) of the rubber versus time and 2) sample cavity pressure versus time.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43b**

MONSANTO® CURE-SIMULATOR module unit

A module unit that gives the Oscillating-Disk Rheometer the capability to cure an elastomeric sample under programmed temperature conditions identical with those of the factory. Particularly useful in curing studies of large cross-section or irregular cross-section rubber articles.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43b**

MONSANTO CURETRON® data acquisition unit

Module data acquisition unit that gives the Oscillating-Disk Rheometer the capability to produce numerical quality control data in addition to conventional graphical data. Used for in-process quality control applications in the rubber industry.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43b**

MONSANTO® DIE SWELL DETECTOR, AUTOMATIC

The Automatic Die Swell Detector precisely measures the swell (or memory) character of an extrusion as it exists from the orifice of a capillary rheometer. This measurement indicates the materials' elastic response at conditions similar to processing shear rates and temperatures. The instrument is particularly useful in controlling blow molding, film and profile extrusion and other processes where drawdown character or dimensional stability is critical.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43b**

MONSANTO® DISK RHEOMETER, MODELS R-100 and R-900/750

Floor model or table model rheometers which indicate rubber or rubber-like compound properties such as thermoplasticity, processing safety, cure rate, optimum cure time, and ultimate state of cure. Data are presented as a continuous plot of compound physical properties vs. cure time in accordance with ASTM D-2084-73P.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43b**

MONSANTO® FATIGUE-TO-FAILURE TESTER flex tester

Bench model fatigue tester which measures the ultimate fatigue life of cured rubber compounds at selected strain amplitude ratios. Data are presented as the number of cycles to failure.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43b**

MONSANTO® MOONEY COMPUTER

The Mooney Computer is an add-on data processing unit used with the Monsanto custom and standard Mooney Viscometers. Mooney data is automatically displayed on a teletype printer.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43b**

MONSANTO® MOONEY VISCOMETER

Three basic models of shearing disk viscometers designed for operation in accordance with ASTM D 1646, BS 1673 and ISO R 289. All measure plasticity of unvulcanized elastomers and processing performance of compounded elastomers.

The Compact Mooney Viscometer offers simplicity

0684202

of operation, minimum of floor space. Equipped with direct digital readout for viscosity measurements. Strip chart recorder with 12 speeds available.

The Standard Mooney Viscometer has flat bed recorder, push-button temperature selector, and solid state components.

Custom Mooney Viscometers are tailored to customer's individual laboratory or factory needs and offers compatibility with existing computers.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43b**

MONSANTO® POWER INTEGRATOR

The power integrator is an instrument that continuously measures and displays the total power used by an energy consuming process such as Banbury, mill or other mixing system. Power integration can be used to standardize and control the work input to a batch of rubber. This technique produces more uniform mixing and consequently greater homogeneity in the finished rubber products.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43b**

MONSANTO® PROCESSABILITY TESTER

The Processability Tester combines an advanced design constant rate capillary rheometer with laser die swell and stress relaxation measurement capability. The instrument modular package includes a microprocessor, servohydraulic drive and precision temperature control. The instrument defines and predicts material characteristics important to the total production process. Tests are conducted at conditions of temperature and shear rate equivalent to those experienced in the actual production process.

Typical uses include viscosity and shear stress characterization, correlative studies of mixing and extruder operation, dimensional stability, homogeneity, carbon black loading analysis, stress relaxation characterization, and scorch determination.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43b**

MONSANTO® RHEOMETER COMPUTER

The Rheometer Computer can be attached to Monsanto Oscillating-Disk Rheometers (MP-V, TM-100 and R-100 models) to automatically print out cure-meter data. Data, including sample identification, are printed on a page printer in accordance with international standard methods.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43b**

MONSANTO® TENSOMETER, MODEL T-500 tensile tester

A floor model universal tester with variable cross-

head drive and comprehensive stress/strain electronic recording system giving results in real engineering terms on a flatbed strip chart recorder. Designed to meet the requirements of BS 903, Part A2, 1971; ASTM D 412, ASTM 638, DIN 53504, ISO/R37, etc.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43b**

MONSANTO® TENSOMETER, MODEL W tensile tester

A table model, horizontal, motor driven tensile tester with load capacity of 4,000 lbs. (1814.4 kg). Seven calibrated spring beams are provided for various ranges. A drum type autographic recorder automatically plots stress/strain. A second recorder allows modulus testing.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **43b**

MONSANTO® X-RAY UNIT (three different units available)

The Monsanto Air-Inflated X-ray System is designed to inspect passenger and light truck tires, bead-to-bead, for all cord materials. The unit employs tire automatic conveyance and sequencing.

The Universal Tire X-ray System is a manual laboratory system to inspect cured and green tire construction. The Monsanto patented lighthouse x-ray tube enables the operator to inspect the complete tire from bead-to-bead with consistent geometric presentation.

The Off-The-Road Tire Inspection System is designed to accomplish dynamic or static x-ray inspection of tires of the off-the-road class. This system makes it possible for a single operator to x-ray inspect the complete tire from bead-to-bead through 360°.

STABLE ISOTOPES

Monsanto supplies stable isotopes of the noble gases, carbon, sulfur, nitrogen, bromine, chlorine, and oxygen. Stable carbon isotopes are available in five forms. All of these products are nonradioactive, i.e., stable. They are of controlled purity with various enrichment levels. For each isotope the degree of enrichment is specified as well as minimum purity. The gaseous products are supplied in glass ampoules and steel cylinders, liquids in glass bottles and solids in plastic bottles.

The following stable isotopes are available for physical, chemical, biological research; for industrial uses in nuclear technology; in medical research and diagnostics; for cryogenics and physics studies; in various nuclear physics devices; and in tracer studies of chemical and biological process, where a radioactive isotope would be undesirable. Further information may be obtained upon request.

SURFACE ACTIVE AGENTS, DETERGENTS and BLEACHES

BLEACHING COMPOUNDS

ACL® 56, 59, 60, 66, 85 SANITIZER and BLEACHING COMPOUNDS

ACL 56, sodium dichloroisocyanurate dihydrate, is a 56% available chlorine product. It is used in detergent applications, bleaches, and pool disinfection.

ACL 59, potassium dichloroisocyanurate, is a 59% available chlorine product that is used for swimming pool disinfection and sanitizing. It is also used as an oxidizer in mechanical dishwashing compounds and other detergent applications.

ACL 60, sodium dichloroisocyanurate, is a 62% available chlorine product. It is used in detergent applications, bleaches and pool disinfection.

ACL 66, (monotrichloro) tetra-(monopotassium dichloro)-penta-isocyanurate, is a 66% available chlorine product used in sanitizers and detergent applications.

ACL 85, trichloroisocyanuric acid, is a 90% available chlorine product. It is used for pool disinfection in compacted forms and used in detergent applications.

DETERGENT INTERMEDIATES

ALKYLATE 215, 225 and 230 alkylbenzene-biodegradable

These alkylates are supplied as intermediates for the manufacture of anionic liquid and solid detergents. The three grades are monoalkylbenzene

mixtures of different molecular weights.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

SURFACE ACTIVE AGENTS- ANIONIC

DDBSA 99-B alkylbenzene sulfonic acid-biodegradable

DDBSA 99-B is produced by the sulfonation of refined linear alkylbenzene with SO₃ and contains a minimum amount of free sulfuric acid. It can be neutralized with various bases and is used as an intermediate for the preparation of neutral alkylaryl sulfonates. Primary use is in liquid detergents.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

MONSANTO® H-230 AROMATIC NAPHTHA

A coproduct of the manufacture of linear alkylbenzene, Monsanto H-230 is a mixture of alkylated benzenes. Available in commercial quantities, the product may be sulfonated and is commonly used for the manufacture of surfactants, oil additives, and other specialty chemicals.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

SURFACE ACTIVE AGENTS- NONIONIC

STEROX® AJ SURFACTANT tridecanoethylene oxide condensates (polyoxyethylene ether)

Sterox AJ is an 85% active nonionic surface active agent in solution form. Sterox AJ (85% active, 15% H₂O) was developed for use where a liquid product is more desirable. Sterox AJ's outstanding property is its stability under the most adverse conditions. It is used in combination with phosphate, carbonate and silicate builders to formulate laundering products; in the paper industry as a wetting agent for paper toweling; for heavy duty cleaning compounds, and in textile processing.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 41a

STEROX® AJ-100 SURFACTANT polyoxyethylene ether

Sterox AJ-100 is a 100% active nonionic surface active agent which is a soft waxy material at room temperature. Sterox AJ-100 is used in household detergents and detergent sanitizer formulations, but it is particularly suited for agricultural emulsions and detergent formulations where added water is detrimental.

TOWOLDMON0042289
WATER_PCB-00033335

STEROX® DF SURFACTANT *dodecylphenol-ethylene oxide condensate (alkylaryl polyoxyethylene ether)*

Sterox DF is a liquid nonionic surface active agent. It is primarily designed as an intermediate for sulfation to produce a high foaming active ingredient for liquid detergents. It also shows considerable potential as a paper rewetting agent.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **41a**

STEROX® DJ SURFACTANT *dodecylphenol-ethylene oxide condensate (alkylaryl polyoxyethylene ether)*

Sterox DJ is a liquid nonionic surface active agent based on dodecylphenol and 9-10 moles of ethylene oxide. It is a general purpose surfactant with a much lower degree of foaming in comparison to other alkylphenol based nonionics. It is an extremely effective detergent and can be compounded with phosphates and the usual detergent builders for a wide range of applications including textile, paper, leather processing; metal cleaning; emulsifiable toxicant concentrates; latex formulations; and in chemical processing.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **41a**

STEROX® ND SURFACTANT *nonylphenol-ethylene oxide condensate*

Sterox ND is a liquid nonionic surface active agent which contains an average of four moles of ethylene oxide. It exhibits excellent oil soluble surfactant properties, and it is highly soluble in nonpolar solvents. Sterox ND is used primarily as an intermediate in the production of anionic surfactants.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **41a**

STEROX® NE SURFACTANT *nonylphenol-ethylene oxide condensate*

Sterox NE is a liquid nonionic surface active agent with an average of five moles of ethylene oxide. It has excellent oil soluble surfactant properties and is used as an active ingredient in gasoline deicer additives. In addition, it is used as a wetting agent and as an intermediate in the production of sulfated nonionic detergents.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **41a**

STEROX® NJ SURFACTANT *nonylphenol-ethylene oxide condensate (alkylaryl polyoxyethylene ether)*

Sterox NJ is a general purpose nonionic surfactant. It has proven effective in a wide range of applications including dry and liquid detergent

ingredient; in textile, paper, and leather processing; for metal cleaning; and in latex formulations.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **41a**

STEROX® NK SURFACTANT *nonylphenol-ethylene oxide condensate (alkylaryl polyoxyethylene ether)*

Sterox NK is a nonionic, general purpose surface active agent containing an average of 10.5 moles of ethylene oxide. Sterox NK is an excellent water-soluble wetting agent and finds wide application in textile processing. It is also used to formulate general purpose dry and liquid detergents, household cleaners and industrial cleaners.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key **41a**

STEROX® NM SURFACTANT *nonylphenol-ethylene oxide condensate*

Sterox NM is a nonionic surface active agent with an average of 12.5 moles of ethylene oxide. It is especially well suited for modern liquid detergent formulations because of its superior high foaming characteristics and an odor level which is significantly lower than that of competitive surfactants. Sterox NM exhibits excellent deterative properties when compared to a lauryl sulfate standard, and it is an effective wetting agent.

STYMER® COPOLYMER RESINS

Stymer LF is a vinyl resin, soluble in ammonium hydroxide; Stymer S is a styrene copolymer resin, soluble in water. These textile resins are outstanding as sizing agents for acetate. Stymer LF-25 is designed as a durable size. Stymer S is a water-soluble removable size. They are used as sizes for filament acetates by the textile industry.

WATER TREATING CHEMICALS

DEQUEST® 2000 phosphonate

Used in any aqueous system for the prevention of scale formation or to inhibit precipitation in water treating applications. A particularly effective additive in industrial cleaner formulations for the control of extraneous metal ions and to improve soil or scale removal. Used as a scale control agent in oil production.

MONSANTO INDUSTRIAL CHEMICALS CO.

Locator Key 44a

DEQUEST® 2006 phosphonate

Used in neutral or alkaline systems for the prevention of scale or to prevent mineral precipitation. Agent for deflocculating clays, cements, resins, pigments and the like. Effective additive for alkaline cleaners (such as bottle washing formulas or dairy cleaners) or in general-purpose detergents.

MONSANTO INDUSTRIAL CHEMICALS CO.
