Q And at that time -- is that the time when Mr. Grewe was eventually diagnosed with mesothelioma?

A Yes, an abnormality was seen of his biopsy and the biopsy showed mesothelioma.

Q Now, when the procedure is done, are chest tubes inserted?

A Yes, chest tubes are typically inserted after that procedure is done to drain whatever fluid is there and also to re-inflate the lung.

Q Did the chest tubes remain in place for a period of time?

A Depends on the condition. Ideally they remain in place overnight and are pulled the next morning.

If there are substantially more abnormalities of the chest, they may have to stay in longer.

Q Because Mr. Grewe was short of breath, he had a procedure done known as a pleurodesis?

A Yes.

Q What was that procedure?
