Dr. J. J. Bloomfield,
Chairman, Program Committee,
American Industrial Hygiene Association,
National Institute of Health,
Bethesda, Maryland.

Dear Jack:

I have your letter of January 10, concerning the program material for the St. Louis Meeting. I should have replied sooner, but I have been so pressed for time, having only returned recently to this country, that it has been impossible for me to deal with any but the most urgent items of my correspondence. I am very glad to give you such tentative information about the status of our work, as is now available. You realize no doubt that most of our work has been in restricted and confidential fields, and there is not too much to offer. I had hoped to get together some articles for publication to be used in meetings of this type, but I am afraid there is no hope of my doing much along this line for many months to come.

I have two titles, or rather two sub-titles under a general heading that may be of some interest, "The Toxicity of Certain Chemicals Used in the Manufacture of Sulfa Drugs:

- A. 2-Aminodiazine and 2-Amino-4-Methyl Pyrimidine,
by Treon, Heyroth and Wright
- B. 2-Aminothiozole, by Deichmann."

We shall give very serious thought to the possibility of preparing two or three other papers. If there is a dearth of program material, we should be glad to exert ourselves to some special degree in getting together other articles for which data are available. If you will let me know what the prospects are for program material, I shall know better whether we ought to push this matter a little harder or whether we can put our attention on some other work. It is
