

Meeting with Honeywell

19 March 2024

Participants

- [REDACTED]
- Commission: Joan Canton

Summary

- Honeywell came to present their activities, in particular around advanced materials.
- [REDACTED]
- Honeywell explained their concerns about the EU regulatory process to potentially regulate thousands of diverse PFAS as a single class. Specifically, they are concerned that this regulatory process:
 - o Ignores the diversity of PFAS and their various applications, as well as evidence that particular substances (including HFOs/HFCs and PCTFE produced by Honeywell).
 - o Disregards industry and business concerns about proportionality, enforceability, socioeconomic impact, lack of viable alternatives and risk of unforeseen supply chain disruptions.
- The Commission explained the state of play in the preparation of this restriction, as well as the approach to be followed when preparing such restrictions.
