COP-14

June 22, 1959

Dear Sir:

Enclosed is your new Coppus Turbine Folder. It is all new and we urge you to get acquainted with it.

The entirely new Catalog 200 in the folder features the many "Extras" you get with every Coppus turbine. Please refer to the sectional drawings on pages 6, 7 and 8.

The brake rim construction is standard on all sizes and gives you protection in case of a runaway condition.

Carbon ring glands have separate bronze partition plates assuring extra tight sealing and long life, good for back pressures up to 80 PSIG. Molded metallic packing is available at a somewhat lower cost, suitable for back pressures up to 40 PSIG. Both packings are readily accessible.

The totally enclosed slow speed, constant speed governor and the pilot operated excess speed safety trip are exclusive with Coppus turbines.

The "L" type wheel with wide blades for low water rates and higher horsepower is now also available for the larger Coppus turbine sizes 22 and 23.

More detailed water rate tables for Coppus turbines give you a true picture of actual steam consumption and with the multiple nozzle control furnished as standard, best possible water rates can be obtained at partial load operation.

A complete new set of price lists gives you today's low prices for horizontal and vertical turbines constructed for various steam conditions. The list prices now include carbon ring sealing glands and there is a price reduction for molded metallic packing.

Prices of the TF-12 and TF-23 have been reduced.

Manufacturing six turbine frame sizes allows selecting a unit tailored closely to the actual requirement. This results in a favorable initial cost not to speak of low operating and maintenance cost.

Coppus is your best source for Blue Ribbon quality turbines.

Sincerely yours,

COPPUS ENGINEERING CORPORATION
