Mr. Art Catlin
General Manager
Genuine Parts Company, Inc.
Rayloc - Payson
P. O. Box 347
Payson, Utah 84651

Dear Mr. Catlin:

The attached report will confirm the results of my industrial hygiene air sampling survey conducted at your automotive replacement part remanufacturing facilities on March 29, 1989. This survey was requested by Rayloc division management to assess employees' potential exposure to airborne asbestos fibers during typical Brake Department operations. The areas evaluated during this survey included Debonding, Delining, Disc Brake Riveting, Clutch Disc Drilling, and Receiving operations.

Also during this survey, industrial hygiene air sampling was performed in the Cleaning Room to assess employees' potential exposure to perchloroethylene vapors during degreasing operations. Both personal and general area samples were taken to evaluate this exposure.

I would like to thank both you and Ms. LuAnn Wignall, Personnel Manager, for your cooperation and the courtesies extended towards me during my visit. If you have any questions regarding this industrial hygiene air sampling survey or the recommendations submitted, please contact me.

Yours truly,

Joseph E. David, III
