Notes: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufacturing, is an organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown in the last 3 years in which censuses were conducted.

	Industry 3271	Industry 3272	Industry 3273	Industry 3274	Industry 3275	Industry 3281
1972.....	1,370	3,149	3,374	69	44	874
1967.....	1,534	3,055	4,002	78	55	775
1963.....	1,786	3,120	3,929	81	66	837

(NA) Not available. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census and related data. Thus, these estimates may be of limited reliability.

For interdecadal years, annual survey of manufactures (ASMs) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage of errors are shown in the Annual Survey of Manufactures volume. Data prior to 1954 appear in Volume II, 1953 Census of Manufactures, chapter devoted to this industry.

... ..

x

^a An important source of mortality statistics (ASVD) reports data are estimates based on a representative sample of death certificates submitted annually and may differ from results of a complete review of all death certificates. ASVD publication shows percentage standard errors. Unless otherwise noted, for data prior to 1993, see 1993 Census of Manufactures, vol. 1, table 1, <http://www.census.gov/manufacturing/93pubs/m93-101.pdf>.

^aFor the purpose of this report, as defined as a business organization consisting of one establishment or more under common ownership or control. ^bIndustry codes are as recorded for 1972 Census of Manufactures, so data are available only for years shown. ^cData for 1957 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1968 Census of Manufactures. ^dSource: data for all other years are general and available.

* If the standard error exceeds 15 percent or is not consistent with other census data and related data; thus these estimates may be of limited reliability.

Estimated for other data items are of good precision for all years except 1982, when the percentage withheld to avoid disclosing operations of individual companies is 10 percent. The percentage withheld for 1982 is 10 percent because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials supplied by others.

² Each value of shipment column represent value of production rather than value of shipments. Consequently, formula for computing value added by market store was modified to (value of production) less (change in inventories between beginning and end of year).

¹¹ Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.
