LUCITE® HOUSE PAINT - NO. 50 WHITE

Your letter of May 15, 1969, addressed to J. F. Morgan requesting an opinion regarding safety in using methyl 2-benzimidazole carbamate (E-965 fungicide) at a level of 0.1 per cent in No. 50 White Lucite® Acrylic House Paint, was given to me for reply.

Methyl 2-benzimidazole carbamate has been rather extensively studied at Haskell Laboratory. Oral, dermal, and eye toxicity tests were conducted on this compound. On the basis of the results obtained from these studies, I would not expect the inclusion of 0.1 per cent methyl 2-benzimidazole carbamate in No. 50 White Lucite® Acrylic House Paint to present any significant toxicological problems.
