From J. V. Uptain
Date January 23, 1980
Subject VCM DOSIMETRY - SAMPLING FREQUENCY

As requested, I have reviewed the results of VCM dosimetry during the last half of 1979 (See Table I) to determine what, if any, changes need to be made in sampling frequencies.

Based on these results and the probable exposure potentials, I recommend the sampling frequency scheme in Table II. Note that "quarterly" sampling would be discontinued and the number of samples per year reduced by 310 (22%).

A handwritten signature in dark ink, appearing to read "Gerald Uptain".
