PRELIMINARY ASBESTOS SAMPLING

As I discussed with you in January, the preliminary sampling is complete (Table I). The samples have been shipped under separate cover. The samples are in the pre-assembled Millipore® holders MAW P037A0 pore size 0.8 μ . Millipore® confirmed these filters are filled with AAW P03700 AA pore size 0.8 μ mixed cellulose acetate paper as requested. The samples numbered 41 and 42 are blanks for your testing.

The samples represent both area and personnel samples taken at two different flow rates. These samples should serve as guides for future sampling.

Please send me the results as soon as possible. Call me if you have any questions about these samples.
