

**UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION 8
RESOURCE CONSERVATION AND RECOVERY ACT**

BASIC INFORMATION

Facility Name: BIA Roads Garage

RCRA ID: XHW100000003

Notification Status: Very Small Quantity
Generator (VSQG)

Date of Inspection: August 18, 2021

Facility Location: 49 Norkok Street, Fort
Washakie, Wyoming, Lat/Long: 43.006785,
-108.881055

Facility Contacts: Phillip Mesteth, 307-332-
3902, and
Melissa Passes, 406-247-7911 ext. 5160

Arrival Time: 9:35 a.m.

Departure Time: 11:10 a.m.

Lead Inspector: Annette Maxwell, U.S. EPA RCRA Inspector

Other Attendees:

1. Cindy Schafer, RCRA & CAA Inspector, U.S. EPA
2. Steve Babits, Environmental Scientist, Northern Arapaho Natural Resource Office
3. Phillip Mesteth, Facility Manager, Bureau of Indian Affairs (BIA)
4. Leslie Shakespeare, Superintendent, BIA

Type and Purpose of Inspection: Compliance Evaluation Inspection

Facility Type: Vehicle and equipment repair and maintenance, storage of equipment, chemicals and supplies; offices.

Applicable Regulations to Inspection: 40 CFR Parts 260-279

Inspection Type: Unannounced Inspection

OPENING CONFERENCE

☒ Credentials Presented

☒ CBI warning to facility provided

☒ Small Business Assistance Worksheet
provided to facility contact

☐ CBI was provided or discussed during the
inspection

The following information was verbally obtained during the inspection.

General Facility and Process Description: The BIA Roads Garage (Facility) is a BIA site that was not in operation at the time of the inspection, but it has previously been used for vehicle maintenance and equipment storage for transportation operations. The prior tenant at the site was the Shoshone and Arapaho Tribal Transportation Department, which had relocated to 1114 17-Mile Road, Arapahoe, Wyoming. Activities previously performed at the Facility included vehicle and equipment oil changes;

Facility Name: BIA Roads Garage

Facility Location: 49 Norkok Street, Fort Washakie, Wyoming

Dates of Inspection: August 18, 2021

spent lead acid battery changes; and storage of chemicals used for equipment maintenance and road repairs. (A site map is included in Attachment 1 – Site Map.)

TOUR INFORMATION

Upon arrival at the Facility the gate was open, but no site representatives were initially present. However, Mr. Mesteth arrived within a few minutes and accompanied us through the site. He stated that his office is located in a white building across the street. Mr. Shakespeare also attended a portion of the inspection.

Photos taken during the inspection are included in Attachment 2 – Photo Log.

Areas of the Facility toured:

- Used oil storage tank
 - This tank is aboveground and located in a low indentation in the ground that appeared to have been intentionally created for use as secondary containment in the event of a spill. The tank was labeled “Used Oil” and it did not appear to be leaking, but it did have some rust apparent. (See Photos 1-2.)
- Chemical and equipment storage shed on northwest portion of the Facility
 - This building is roofed and mostly enclosed on three sides, but it is open to the east:
 - On the left side of the storage shed, five drums that appeared to be 55-gallons in size were stored on a secondary containment pallet. Labels on three drums stated “CRC-950-Blizzard” with one labeled “Clean Strip J1A Form Release” and one labeled “Chevron 1000 THF”. Two of the Blizzard drums were damaged (see photos 11 and 13). One Blizzard drum was equipped with a hand pump (see photo 12). In addition, there were three buckets with one labeled “Mobil Gear 600 XP 150”, one labeled “Day Chem Rez Cure C-309”, and one labeled “Jet Wet/Water Wetter”. The labels appeared old with many torn and weathered; it was unclear whether the contents of the containers were accurately represented by the labels or if the containers had been reused to store other chemicals.
 - On the right side of the storage shed, one 55-gallon metal drum was located on a pallet. The drum was not labeled. (See photos 14-16.)
- Facility yard
 - Several plastic totes approximately 275 gallons in size were located in various outdoor areas of the Facility yard that included:
 - one tote in the northwest corner of the Facility that contained dry yellow solids (see photos 17-19);
 - one tote on the east side of the Facility appeared to contain used oil, but it was not labeled and it was cracked in two locations (though I did not observe indication of leaks from the cracks, which were above the liquid level) (see photos 23-27).
 - eight totes located on the southwest side of the Facility:
 - one partially crushed tote containing dry white solids was not labeled. (see photos 28-29);
 - one tote with the top cut off and on its side containing a dry yellow solid (see photos 28 and 30);
 - one tote containing a white solid was not labeled (see photos 28 and 31);

Facility Name: BIA Roads Garage

Facility Location: 49 Norkok Street, Fort Washakie, Wyoming

Dates of Inspection: August 18, 2021

- one tote containing a dry white solid was labeled “Colorado Paint Company” (see photos 28, 32 and 33);
- one tote containing dry white solid labeled “Traffic Marking Striping Paint” (see photos 28, 34, 35 and 36);
- an additional tote labeled “Traffic Marking Striping Paint” (see photos 28 and 37-38);
- one tote containing approximately three-four inches of liquid labeled “Traffic Marking Striping Paint” (see photos 28, 39-40); and
- one tote containing dry white solids labeled “1160 White Fast Dry” (see photos 28, 41 and 42).
- South side of buildings
 - one tote labeled “1160 White Fast Dry” (see photos 43 and 44) and
 - one tote containing dry yellow solids was labeled “1166LF Lead Free Yellow Fast Dry” (see photos 43, 46 and 47).
- Also, in areas of the Facility yard were:
 - red bucket with stained soil located on the north side of the Facility (see photos 20-22) and
 - stained soil on the south side of the buildings (see photo 45).
- Office area
- Vehicle and equipment maintenance and repair bays
 - Upstairs in a document storage area there were three boxes of fluorescent tube lamps labeled “Superior Lamp Inc.”;
 - in the westernmost bay one used oil collection container with used oil and a used oil filter in it was not labeled (see photo 48);
 - in the second (easternmost) bay two open used oil collection containers with oil in them, one with a used oil filter in it that was not labeled (see photos 49-50);
 - caged chemical storage area containing multiple chemicals including, but not limited to, Brakleen, TroubleShooter, Mac’s Starting Fluid, Kooler Kleen, Mac’s Windshield Deicer, a cabinet of GP66 Miracle cleaner (approximately two dozen bottles), 10 bottles of Sta-Bil Fuel stabilizer, a plastic bottle with handwritten words “Tire Slick” and one bottle of Evapo-Rust; and
 - floor drains in each bay, which Mr. Mesteth stated drained to a vault located east of the building.
- Underground wastewater vault
 - Mr. Mesteth opened the cover of the vault, which is located immediately to the east of the buildings, and I observed that liquid was present inside the vault.

RECORDS REVIEW

No records were reviewed on-site due to the Facility’s inactive status.

Facility Name: BIA Roads Garage

Facility Location: 49 Norkok Street, Fort Washakie, Wyoming

Dates of Inspection: August 18, 2021

CLOSING CONFERENCE

At the conclusion of the inspection, a closing conference was held with Mr. Mesteth. I stated that I had concerns regarding the presence of wastes at the site and that an inspection report and letter would be prepared and issued indicating steps required for follow-up.

CONCERNS OR DEFICIENCIES

Chemicals at the site at the time of the inspection appeared to be abandoned and are, therefore, wastes per the definition of solid waste found in 40 CFR § 260.10 and, by reference, § 261.2 Definition of solid waste. Wastes observed on-site during the inspection included, but are not limited to:

- unused chemicals,
- unknown materials in unlabeled or mislabeled containers,
- used oil,
- material contained in the underground vault,
- contaminated soil, and
- universal wastes, e.g., fluorescent light bulbs.

Pursuant to 40 CFR § 262.11, a hazardous waste determination must be made for each solid waste to determine whether that waste is hazardous so that appropriate disposal can be determined.
