Subject: Bulk Sample Analysis for Asbestos

The samples from the Assembly Plant Tunnel and from the Pulverizer Building that you submitted on March 23, 1983 were analyzed for the presence of asbestos, type and percentage. Environmental Research Group, Inc. of Ann Arbor performed the analysis by polarized light microscopy (PLM).

Results indicate positive identification for asbestos:

Dct A2	Assembly Plant Tunnel	7% Chrysotile
Dct A3	Vent duct - Pulverizer Building	16% Chrysotile 27% Amosite

Therefore, this material must be regarded as containing asbestos, and all aspects of OSHA Asbestos Regulation 29 CFR 1910.1001 and relevant EPA regulations must be complied with. Please inform all appropriate parties of these findings, and ensure that the Company asbestos policy is followed.
